The other objection to the bill is because of its "horizontal" reduction; and the word itself has been made the target for abuse and raillery, as if it involved something before unheard-of and inherently absurd. My friend from Texas [Mr. MILLS] has already cited many instances where duties have been "horizontally" reduced or raised. He has shown that Mr. Clay's great compromise tariff of 1833 provided for successive horizontal reductions every alternate year for ten years. So much for precedent. But I am constrained to say that, so far from being a bungling mode of legislation in a bill which does not profess to revise the tariff, but solely to reduce taxes, keeping the rates well above the protective standard, I can conceive of no method more effective and reasonable than the "horizontal" one. But it is not altogether horizontal. There is a maximum rate prescribed in three schedules; in two schedules, liquors and silks, there is to be no reduction at all, and the high-water mark of the Morrill tariff limits the downward cut. It is calculated to effect a reduction of less than 16 per cent. from present rates, which, added to the reduction of March 3, 1883, reported at 1.74 per hundred dollars, does not yet reach that substantial reduction of from 20 to 25 per cent. at which the Tariff Commission aimed, which the best conservative sentiment justified, and the protectionists through their organs urged Congress to adopt.

INDIRECT BURDENS.

But it is not alone in its direct burdens that the present war tariff oppresses our people. Not only does it bear most heavily and unevenly upon the American laborer, but by unduly increasing the cost of living and the cost of production it disables him from sharing in the general trade and prosperity of the world. Our manufacturers, taxed at every step in the process of production, upon their raw material, upon their plant, upon the cost of their machinery, can not compete in the great markets with those who produce under lighter burdens and happier conditions. Instead of having the whole world for customers, the enterprise of our people, their inventive skill, and their unequaled resources are confined to the pent-up Utica of the home market, which can give neither free play to capital nor steady employment to labor, and so American industry, like a great pendulum, is ever swinging from unnatural activity to disastrous idleness. Scarcely does it get into the full sweep of progress, filling the land with new life and quickening the pulse of business throughout our borders, when the warning cry of "overproduction" and "a glutted market," like that of "breakers ahead," is heard. The wheels must be clogged, the cheerful hum of the machinery ceases, the fires are banked, and capital hies to its coverts, while labor sits vainly begging for employment.

AGRICULTURE.

So, too, with agriculture, the chiefest of our industries, and the great hope for the vigor, the purity, and the perpetuity of our institutions.

The farmer struggling with these public burdens, so needlessly and cruelly increased, taxed upon his food and his clothing, the furniture of his home and the implements of his calling, and upon his transportation, sells his surplus grain and meat products in foreign markets and in competition with those who produce under lighter taxes, and must content himself with more precarious and scanty rewards for his labors and his anxieties.

Indeed he is, this very day, threatened with the loss of these markets and their complete occupation by the farmers of India and Australia. Wheat at 80 cents in Chicago is the startling announcement, which, like the fire-bell at night, should arouse him to a sense of his dangers and his difficulties.

COMMERCE.

But still more humiliating to our pride is the decay of our commercial marine. Our flag to-day floats only over the home market. It has been driven from the seas, not by the superior force but by the superior enterprise of other nations. The products of our farms and our factories, nay, even the traveler from our shores, can find no exit but upon foreign vessels. American enterprise cowers upon the shore; the paths of the ocean are not for it, nor the spoils of its fields. One hundred and twenty millions annually paid as freight to foreign sailors! What a mockery as the result of legislation claimed to be in the interest of American labor! How much of employment, of prosperity, of wealth for American labor in these $120,000,000! And yet it is as completely shut out from participation as by a forbidding statute. In 1860, after ten years of low tariff, 66.5 per cent. of our foreign trade was carried in American bottoms. In 1883, after twenty years of high taxes, 84 per cent. is carried in alien ships. Who does not recall in this connection the words in which, more than a century ago, Edmund Burke extolled the hardihood and enterprise of our sailors:

No sea but what is vexed by their fisheries; no climate that is not a witness to their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise ever carried this most perilous mode of hard industry to the extent to which it has been pushed by this recent people—a people who are yet in the gristle and not yet hardened into the bone of manhood.

Contrast this with what I have just stated, and with the fact cited by the gentleman from Ohio [Mr. HURD], that in the grand procession of nations through the Suez Canal last year, in all the thousands of vessels bearing the commerce of the world, not one bore the flag of this great ocean-bound country! Sir, is not this enough to make us hang our heads in shame and to kindle one patriotic outburst against a system of taxation so grievous, so pervasive, and withal so largely unnecessary as to reduce us to this level of helplessness and inferiority?

THE BILL NOT EQUITABLE IN ALL RESPECTS.

Mr. Chairman, I have said enough to indicate my support of any wise scheme for the reduction of taxes. I voted for the consideration of this bill. I shall vote to-morrow against the motion to strike out the enacting clause. This does not imply an indorsement of the bill as it stands. It simply means a willingness to consider and support a bill with the general object professed by this one, "to reduce import duties and war-tariff taxes." If we do not strike out the enacting clause, but proceed to consider the bill by sections, it can be amended and perfected wherever this may be necessary. A vote in favor of that motion presents itself to my judgment as a vote to prevent all legislation at this session for the reduction of taxes and for the relief of the people and of our industries. The same vote that can strike out the enacting clause can strike out everything after the enacting clause and substitute such a bill or such provisions as may be wiser and better. As I have said, I favor a bill for the reduction of taxes. Where this bill departs from its general scheme of merely reducing taxes and seeks to enlarge the free-list, it bears unevenly and, as I believe, unjustly upon some of the interests of my own State.

To take any one great interest and transfer it suddenly to the free-list is to hold it tributary to all the rest while depriving it of any share in the common "protection." Whatever reduction is made should be made so gradually as not to wreck, to disturb, or to alarm any of our great industries, and this return toward a peace tariff ought to be

made by even progress and on a scale of justice to all. This bill would permit reciprocal free coal with Canada, a provision I think little apt to be carried out, and free coal from England. Coal is now free so far as the foreign and coastwise trade is concerned, having otherwise a duty of 75 cents per ton, which is less than 20 per cent. ad valorem, under a tariff whose general average is over 40 per cent. Should we proceed to the consideration of this bill by sections, I shall present to the committee such facts and figures as will bear fully upon this question, and I have every confidence—indeed I may add I have every assurance that can now be given—that this inequality and discrimination will be corrected and the interests of my own State share only in the general fortune of all.

Being intrusted with the representation of a district whose people are chiefly engaged in agricultural, pastoral, and mechanical pursuits, yet in common with other sections of my State possessing vast areas of mineral and other resources, to whose development no one looks forward with more of hope and confidence than myself, I am anxious to meet the high trust with which I am honored to place no barrier to the progress of that development, but so far as properly may be done, to remove some of the impediments and hinderances that now retard it. I stand here as the representative of no special interest and will never do so, but the most anxious reflection assures me that in seeking to promote the general welfare I advocate no detriment to any interest, present or prospective, of my immediate State. I seek for her that steady and consistent progress which will speedily give her an industrial prominence among her wealthier sisters. I would save her from the hope deferred, which results from the so-called spasmodic, progress alternating between feverish activity and deathlike slumber. I would wish no hum of industry that drowned the cries of distress and poverty; no smoke of furnace that darkened the home of thrift and labor.

In advocating a reduction of public burdens I am but helping to bring relief to all, with wrong and hurt to none. For to lessen these burdens is to take no profit from capital, but to give it a steadier movement, a more stable progress, a much broader field of enterprise, a much wider command of market. Still less is it to diminish the rewards of labor or lessen the opportunities of employment. On the contrary, it is to secure to the workman more of the fruits of his own labor, to keep for his own use and the use of his family the many days out of every year in which he now toils to put this hundred millions of surplus into the Treasury, to add something to the comforts of his home, something to the education of his children, something to the purchasing power of his wages, to insure the constancy of his employment; in a word, to bring more light to his threshold and "a sweeter liberty to his fireside."

TREASURY DEPATMENT, BUREAU OF STATISTICS, *March* 10, 1884.

JOSEPH NIMMO, JR., *Chief of Bureau.*

Removal of Causes from State Courts.

SPEECH

OF

HON. RICHARD W. TOWNSHEND,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 7, 1884,

On the bill (H. R. 1578) to amend sections 1, 2, 3, and 10 of an act to determine the jurisdiction of the circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes, approved March 3, 1875.

Mr. TOWNSHEND said:

Mr. SPEAKER: I shall vote for this bill, but it falls far short of what I believe the condition of the Federal court dockets, the rights, convenience, and economy of the people demand. Ever since my first appearance in Congress I have endeavored to secure reform of our Federal jurisdiction, but at every session timid but well-intentioned friends of this reform have urged that the full measure of reform can not be accomplished at once and have insisted that we must be content with homeopathic or broken doses. They say we must accomplish by piecemeal what public necessities demand as a whole.

I do not believe in such a line of policy. We should with courage and determination demand the repeal of all those provisions of the statutes bearing upon this question that occasion the evils which have grown up in our Federal judicial system. But as I have discussed this subject at some length in the past three Congresses I can not enter at length upon its discussion now without going over ground which I have already occupied before this House and the country. I shall therefore ask the privilege of laying before the House the remarks which I submitted on June 12, 1878, and which will be found in the record of the proceedings of that date. Before doing so, however, let me say that a copy of the bill which I was then advocating, and which provided mainly for repeal of the laws authorizing the removal of certain causes from the State to the Federal courts, was reported from the Committee on Revision of the Laws in the Forty-sixth Congress with a favorable recommendation, and that it would have passed the House had it not been for the filibustering, obstructive expedients resorted to for several weeks by its opponents on the other side of this House. I now ask attention to my remarks on this subject as delivered in the Forty-fifth Congress:

SPEECH OF HON. RICHARD W. TOWNSHEND

On the bill (H. R. 5069) to amend sections 1, 2, 3, and 10 of an act to determine the jurisdiction of the circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes, approved March 3, 1875.

CONDITION OF THE FEDERAL COURTS.

Mr. TOWNSHEND. Mr. Speaker, it is known to those acquainted with such matters that the Federal courts are overcrowded with business. They are so far behind with their work that it will require three years to dispose of the causes now pending in them. But it can not with any accuracy be determined when the new cases flowing into these courts can receive attention. The expenses of these courts are rapidly growing to an enormous extent. Their cost to the National Treasury in 1850 was only $497,558.54; in 1860, $936,477.61; at the end of the next decade it was $2,162,109.82. In 1875 it had reached $3,322,182.27. At the beginning of the present term of the Supreme Court there were nearly nine hundred cases on the docket. I have no means of knowing with certainty the number of causes on the dockets of the various circuit courts.

But we may form some idea of the number on those dockets from a statement made lately in the debates in another place, in which it was asserted that there were pending, on January 1, 1876, in the court of Chicago, which is in the northern district of Illinois, 3,045 suits. There were pending in that court on January 1, 1877, 3,702 suits, and on January 1, 1878, 4,388 suits. I have not had access to the statistics in other circuits. I will, however, assume that the condition of the division just cited furnishes a fair sample of the remainder. These figures show the rapidity with which the cost of the courts and the amount of business grow, but they do not reveal to us the enormous expense to litigants which must result from the delay and inconvenience of litigation in these courts.

Justice is an essential attribute of good government; but in order that it may be a blessing it must be dispensed freely, without delay, and be within the reach of all.

NATURE OF THE BILL AND AMENDMENT.

Let us now endeavor to ascertain the best way to remedy this condition of the courts and avoid future evils of the same nature. The bill before us from the Judiciary Committee does undoubtedly furnish some remedy, and it meets with my approval; but it does not afford that full measure of relief which is easily attainable and demanded by public interest. It is a very wholesome measure as far as it goes, and will be hailed with much gratification by the people, but it does not go far enough. I shall offer an amendment to this bill which will operate as a permanent and effectual relief. In the remarks I may make I shall devote my time mainly to the discussion of this amendment and to the discussion of principles applicable thereto:

"Strike out all after the word 'petitioners,' in line 51, and all from line 52 to line 56, inclusive, except the words 'or a controversy between the citizens of a State and foreign states;' also strike out the words 'or subjects,' on line 57; also strike out the word 'and,' in line 58; also strike out all from line 59 to line 75, inclusive; also strike out the words 'and if in any action,' in line 102; also strike out all from line 103 to 129, inclusive, and insert after the word 'jury,' in line 129, the following:"

"That sections 639, 640, 641, 642, 643, 644, 646, and 647 of chapter 7 of the Revised Statutes, in relation to the removal of causes from State courts into the circuit courts of the United States, be, and the same are hereby, repealed.

"SEC. 2. That section 2 of an act entitled 'An act to determine the jurisdiction of circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes,' approved March 3, 1875, be amended by striking out the words, 'or in which there shall be a controversy between citizens of different States, or a controversy between citizens of the same State, claiming land under grants of different States, or a controversy between citizens of a State and foreign states, citizens, or subjects.' Also, by striking out in the same section the words 'and when in any suit mentioned in this section there shall be a controversy which is wholly between citizens of different States, and which can be fully determined as between them, then either one or more of the plaintiffs or defendants actually interested in such controversy may remove said suit into the circuit court of the United States for the proper district.' Also, that section 3 of said last-mentioned act be amended by striking out all of said section after the words 'and the said copy being entered as aforesaid in said circuit court of the United States, the cause shall then proceed in the same manner as if it had been originally commenced in the said circuit court:' *Provided*, That nothing contained in this act shall affect any causes in which proceedings for removal from State courts shall have been commenced before the passage of this act."

The main features of this amendment were embraced in a bill introduced by myself on October 29, 1877, as an original bill, and referred to the Judiciary Committee, it being one of the bills for which the pending measure is reported as a substitute. It does not in any degree abridge the grounds of original jurisdiction in the Federal courts. It leaves them in full and undisturbed possession of all the power which Congress has conferred upon them as courts of original jurisdiction. It does not deprive them of a single case which may be legitimately brought therein at this day, nor does it take away from them the power to remove causes from the State to the Federal courts in any case arising in law or equity under the national Constitution or made under their authority, or any cause affecting embassadors, other public ministers and consuls, any case of admiralty and maritime jurisdiction, any controversy to which the United States is a party, any controversy between two or more States or between a State and citizens of another State.

The purpose of this amendment is to prevent the encroachment of the Federal judiciary upon the State courts in cases actually commenced in those courts and over which they have acquired and ought to acquire jurisdiction.

UNAMERICAN AND EVIL TENDENCIES OF PRESENT LAW.

This law of removal is un-American in its tendencies. It is stealthily introducing beneath the foundation of our present constitutional form of government a lever by which the advocates of centralization may overturn and revolutionize the Government of Washington, Jefferson, and Madison, and in lieu thereof establish the Government which Hamilton and John Adams sought to fashion for us.

That law has already nearly demolished the independence of the State judiciary and threatens to destroy their very existence. It disturbs the constitutional balance of the Government, and may bring on a conflict between the State and Federal judicial power which will tax the patience of the people and the wisdom of the ablest statesman to the utmost in order to save the country from violence and civil war. It has inflicted much inconvenience and great expense upon the people, often defeating the ends of justice by practically placing it beyond the reach of the weak and the poor. It has inundated the Federal courts with a flood of cases far beyond their capacity to adjudicate. It has heavily increased the burden of taxation in a period of direful distress.

If I have correctly stated the effect of the law, can any conscientious and intelligent representative of the people hesitate to vote for its repeal? I am sensible of the fact that we should approach the discussion of questions affecting the judiciary system entirely free from sectional and partisan bias, and should fully realize that we are the chosen representatives and law-makers for the whole Union; that our enactments are to affect the peace and welfare of every locality and every class under our flag. If we are solemnly impressed with this responsibility, we are prepared to take into consideration with coolness and deliberation questions which may produce the greatest good to the greatest number.

The past reveals to us that he who advocates most effectively maintenance of the constitutional balance of our Government, preserving the energies of each branch, does in the largest degree promote liberty, order, and peace. I am as ready as any one to concede and defend the rightful and constitutional powers of the Federal courts, and do reverentially bow to all their decisions whenever they deserve homage, and I entertain high admiration for the great minds who have illuminated the Federal judiciary. When acting in its rightful sphere, none shall be permitted to yield more willing reverence for its decrees or be a more zealous friend of its legitimate authority than myself. The Federal Government is supported by three independent pillars: the legislative, executive, and judicial. If either be ruthlessly thrown down the grand fabric will fall. While resting on its proper basis each supports the other and renders the whole strong enough to resist any assault.

STATE AND FEDERAL GOVERNMENT.

But the system of government under which we live is dual, the States being a miniature of the National Government in its form; yet each and their governmental departments are separate and independent within their proper limits. In order that there may be stability and harmony, each must be confined to its true functions without trespass upon each other. While I insist upon the independence and observance of the rights of the national judiciary, it is no less my solemn duty to guard with jealous care the independence of the State judiciary. If I failed to raise the signal of danger and resist efforts to carry either beyond its constitutional limits, I would be disloyal to the trust reposed in me by the people whom I represent upon this floor.

We know that no good government can long exist without an efficient judiciary, and it is especially true in a republic that justice should be found at its basis, to which all should be made to yield, ruler and ruled, those of high as well as of low degree, the upright as well as the vicious. In the dispensation of justice by freemen, Bentham's idea of equality should be adopted as a cardinal maxim: "Everybody to count for one, and nobody to count for more than one."

The line between the Federal and State governments is clearly enough defined in the Federal Constitution.

They who made that instrument employed simple and plain language so that its meaning might be grasped by those of ordinary capacity upon all questions arising between the States and Federal authority. In order to avoid mistake and guide the understanding unerringly the tenth amendment was subsequently added, by which it is declared that all powers not delegated to the United States nor prohibited to the States shall be reserved to the States or the people. We are told in the Federalist that the powers delegated to the Federal Government "are few and defined" and relate chiefly to external objects, while the States retain a residuary and unrestricted sovereignty over all other subjects. And yet the dikes and barriers erected to defend the State judiciary, and through it the liberties of the people, have been broken down by Congressional action and insidious construction of the courts, until the limits of the Federal judiciary have become so obscured that the clearest legal mind can not accurately discover them.

Judge Story says the power to remove causes pending in a State court to the jurisdiction of the Federal courts "is not to be found in express terms in any part of the Constitution; if given it is only given by implication." (2 Story's Const., 1745.)

In my judgment, sir, it has its origin in the unjustifiable interference by Congressional enactments, but to a great and more dangerous extent by constructions of the Federal courts, which go beyond the letter or spirit of either the Constitution or acts of Congress.

CONSTITUTION IN DANGER FROM THE CONSTRUCTIONISTS.

I insist that there is sufficient ground for the fear that the Constitution may be destroyed by construction to arouse the attention of the lovers of the Constitution and the present form of our Government. Alexander Hamilton had perhaps more to do with originating the Federal judicial power than any one person. He had but little faith in the practicability of our Republic. In his desire to establish a strong centralized government, or monarchy, he no doubt in this insidious manner seized upon this opportunity to sow the seeds of centralization. If such was his design he displayed wonderful power of forecasting the eagerness of the Federal judges to aggrandize their power even at the expense of the sovereignty of the States as represented in their judiciary.

WHAT WAS THE MEANING OF THE FOUNDERS OF THE GOVERNMENT?

Suppose the language of the Constitution in this regard was not clear, will not sound lawyers admit that the canons of construction, so familiar to all, should be observed and its true meaning sought for from the intentions of those who made the Constitution? If so, can you review the spirit and principles of the men who created that instrument, can you study the debates over its provisions by the founders of the Government when fresh from a bloody conflict with centralization and monarchy, remember their jealousy of the independence and rights of the States, how they met and drove to the wall every advocate in that great convention who sought to frame a government of strong centralized powers, and then believe that these men intended the work of their hands to be made an instrument for such an invasion of the rights of the States?

No, sir; if the men of 1776 and 1787 apprehended such a danger to be possible from Congressional enactment or the construction of the courts, they would have established such ramparts around the independence and powers of the State judiciary, and would have placed such limitations upon the jurisdiction of the Federal courts, that construction would fail in its ingenuity to devise a way to overleap.

JEFFERSON'S VIEWS ON THE DANGER OF JUDICIAL POWER.

The apprehension I have expressed of serious danger to the Government arising from the lust of judicial power and of a conflict between the jurisdiction of the Federal and State courts is not based upon idle fears. It was an apprehension which disturbed the mind of Jefferson. Looking into the future, he predicted dangers arising therefrom to the very existence of the Government, and which, if permitted to go on unchecked, would eventuate in the total overthrow of the Republic.

No man whose name is connected with the history of this country knew more of the true character of this Government and the proper relations of the States to the National Government than that profoundly philosophic statesman. Indeed its republican features are due more to the plastic hand and the giant intellect of Thomas Jefferson than of any other mortal being. Our system is really Jeffersonian, or based on his theory. He is the greatest genius of free government found in the history of the world. The republic of Plato was utopian. Every effort of man to establish and maintain free government had been an utter failure. No one had preceded him in formulating a practical republic. Whether it shall be enduring depends alone upon the virtue and intelligence of its citizens and their adherence to the fundamental principles on which it was established.

Jefferson was not only the master-mind in forming the outlines of our Government, but he studied and left the impress of his genius upon its details. He viewed the encroachments of the Federal judiciary with serious alarm, and fearlessly denounced them with his trenchant pen. But let him speak for himself. In a letter to Mr. Thomas Ritchie, in 1820, he wrote:

"The judiciary of the United States is the subtle corps of sappers and miners constantly working under the ground to undermine the foundations of our confederated fabric."

He wrote to Archibald Thweat, in 1821:

"I am sensible of the inroads daily making by the Federal into the jurisdiction of its co-ordinate associates, the State governments. * * * The judiciary branch is the instrument which, working like gravity, without intermission is to press us at last into one consolidated mass. * * * If Congress fails to shield the States from dangers so palpable and so imminent, the States must shield themselves and meet the invader foot to foot."

To Mr. C. Hammond he wrote, in 1821:

"It has long, however, been my opinion, and I have never shrunk from its expression, * * * that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary, an irresponsible body (for impeachment is scarcely a scare-crow), working like gravity by night and day, gaining a little to-day and a little to-morrow, and advancing its noiseless step like a thief over the field of jurisdiction, until all shall be usurped from the States and the government of all be consolidated into one."

To Mr. T. Barry, in July, 1822, he wrote:

"The foundations are already deeply laid by their decisions for the annihilation of constitutional State rights and the removal of every check, every counterpoise to the ingulfing power of which themselves are to make a sovereign part."

If this subject in its infancy excited such serious alarm in the immortal author of the Declaration of Independence, may I not be pardoned for expressing fears to-day when the court has made such rapid strides in absorbing the jurisdiction of the State courts? If the sage of Monticello felt justified in hurling his anathemas at the Federal judiciary while it was illumined and presided over by him who has been held to be the ablest and one of the purest of the Federal judges (Marshall) and when its abuses were but a small stream, what

would be his language to-day if he were out of his grave and could witness the stream, swollen into a mighty river, whose banks are overflowing with waters gathered from streams in every State, leaving behind empty channels?

THE DANGER OF CONFLICT BETWEEN STATE AND FEDERAL COURTS.

None will assert that Story was given to idle fears and wrote without reflection. He, too, apprehended danger from this cause. Mark what he said in his great work on the Constitution:

"If State courts should deny the constitutionality of the authority to remove suits from their cognizance, in what manner would they be compelled to relinquish the jurisdiction? In respect to criminal cases there would be at once an end of all control and the State decisions would be paramount to the Constitution; and though in civil suits the courts of the United States might act upon the parties, yet the State courts might act in the same way, and this conflict of jurisdiction would not only jeopard private rights but bring into imminent peril public interests."—2 *Story's Const.*, 1746.

The conflict has been avoided in the past because the invasion by the Federal judiciary "has been noiseless and therefore unalarming" to the people, and because prior to the war neither Congress by positive enactments nor the courts by construction had gone so far as to materially affect the convenience of the people or the business of the State courts. They therefore preferred to yield than to array active opposition. The injury was so light it was believed that public weal demanded submission rather than disturbance.

ENCROACHMENT OF THE FEDERAL COURTS OVER STATE COURTS.

Of late years the Federal judiciary has gone with "noiseless step" so far into the territory which lies beyond their domain, and apparently so harmless, that the people have become habituated to its presence and have patiently submitted to what could have been resisted as an unwarranted invasion of their rights had it come in more robust and ruthless form.

In our civil-war period we found as in all civil wars that *inter arma silent leges*. When the minds of the people were concentrated upon the smoke of battle and the conflict of arms, and when the confusion following the war had seized upon the public mind, the Federal judiciary and the advocates of centralization in Congress stole a march upon the people. Prior to that period it hung upon the outskirts of the domain of the State judiciary, but during the war and the confusion resulting therefrom they have advanced to the very heart of that territory and have asserted as a claim of right what before was based upon sufferance. The steady advance of this power must be arrested or the danger of total annihilation of the independence of the State judiciary will be apparent to all, and centralization will obtain a triumph which only revolution by force can overthrow.

Let me direct your attention to a case which recently occurred, where if the people of the State had not become inured to the centralizing tendency of the Federal powers the hour of danger apprehended by Jefferson and Story would have arrived. The Wisconsin Legislature attempted to avert demolition of the independence of her State judiciary by an enactment providing that grants of charters to insurance companies, or their privilege to do business in that State, should be allowed on the condition that it should not remove suits against it from the State to the Federal courts. A company accepted its charter on that condition, but afterward disregarded this provision. The Supreme Court of the United States held that the act of the Legislature was unconstitutional and the agreement of the insurance company void. Now, if the judiciary of Wisconsin had adhered to the legality of the charter and maintained the constitutionality of the legislative act, and in defiance of the Federal decision by its process enforced the rights and dignity of the State, an alarming conflict would have ensued without any superior authority to determine the conflict.

LEGISLATION ON REMOVAL OF CAUSES FROM STATE TO FEDERAL COURTS.

Most of the legislation on this subject of removal of causes has been enacted since the war. From 1789, when the original judiciary act was passed, down to 1866 our Federal judiciary had that essential quality of a good system—permanency.

No very bitter complaints from the people against the Federal courts were heard during all that long period. It is true that a few wise statesmen who had seen the rocks ahead of the ship of state had warned us of the dangers of wrecking upon what was beneath the surface of the judicial system. But as I have already intimated, the people had never, to any considerable extent, felt the oppression of these courts; they disregarded the prophecies of Jefferson and others. The dangers are now upon them and they cry aloud for relief. In his compilation of the laws and decisions bearing on this subject Judge Dillon remarks:

"That the small tide of litigation that formerly flowed in Federal channels has swollen into a mighty stream."

And he further remarks:

"Certain it is that of late years the importance of the Federal courts has rapidly increased, and that much, perhaps most, of the great litigations of the country is now conducted in them. This is notably so in the Western States."

And:

"The limited right in this regard [removal of causes from State courts] given by the judiciary act has been enlarged from time to time until a very considerable portion of the contested cases in the Federal courts now reach them through this channel."

I call attention to his testimony on this point because he has done as much to enlarge the jurisdiction of the Federal courts by the dangerous power of construction as any judge who has sat upon the Federal bench. But the learned judge fails to tell us that the "limited rights in this regard" have been enlarged far beyond their boundaries by constructions of the laws of Congress in decisions of the Federal courts which have excited the surprise and anxiety of some of our soundest constitutional lawyers and most patriotic citizens. He also fails to tell us that this enlargement of the jurisdiction of the Federal courts has resulted in encroachments upon the legitimate domain of the State judiciary.

In the course of my remarks I shall refer to some of the statutes and decisions conveniently compiled by Judge Dillon in this work.

ORIGINAL JUDICIARY ACT OF 1789.

As I have already indicated, from 1789 until the act of July 27, 1866, the twelfth section of the judiciary act remained as the only statute authorizing the removal of causes from the State courts to the circuit courts of the United States on the ground of citizenship of the parties. Omitting the cases of aliens, we find that the instances in which removals were authorized are very limited. It was restricted or allowed only to the defendant or defendants, and must be applied for by all the defendants.

If some of the plaintiffs were not citizens of the State where the suit was brought, or if some of the defendants were citizens of the same State with plaintiff, or if the defendant answered or submitted to the jurisdiction of the State court before applying for the removal, or if all the real defendants did not apply for the transfer, then in neither of such cases could there be a removal under the original judiciary act, or until the enactments of 1866 and those of subsequent years. When we compare the law as we find it to-day with those prior to that period, we can not be at a loss to discover the reason that the people were so content and patient in this regard. Very few cases were or could be then ravished from the State courts.

THE ACT OF 1866 MANGLED THE JURISDICTION OF STATE COURTS.

But mark the change in 1866. Are not the people justified in their complaints when they contemplate the inroads upon the State jurisdiction; the impoverishment of State courts; the annihilation of the independence of the State judiciary; the invasion of the rights of citizens of the States, and the enormous increase of the cost of the Federal courts to the tax-payer.

Some features of the act of 1866 were very peculiar, I may say absurd. It is therein provided that where a suit is brought by a resident plaintiff in a State court against a resident defendant and a citizen of another State, the suit could by the non-resident defendant be split into two, one half remain in the State court and the other half would go to the Federal court to be adjudged by it. The constitutionality of this act was doubted by some of the Federal judges. Even Judge Dillon was forced to remark:

"It may be inferred that Congress doubted the power under the Constitution to authorize the removal of the whole case since part of the case provided for would be between citizens of the same State."

Mr. Speaker, that act mangled the jurisdiction and insulted the dignity of the State judiciary.

It was a reflection upon the integrity of the people of the States. Thus dividing the case into two delayed the course of justice, embarrassed and annoyed the parties with inconvenience and expense. I am certainly warranted in characterizing the act as an absurdity in implying that the State court was only capable of determining one-half the case.

My time is too limited to draw your attention to all the features of the subsequent acts; I shall only allude to a few of the most important.

ACT OF 1867 AUGMENTED HARDSHIPS OF RESIDENT LITIGANTS.

The act of 1867 went still further in violation of long-established legal principles, as well as augmented the hardships of resident litigants. That act, among other things, provided that the cause might be removed "at any time before trial or final hearing of the suit." This act, for the first time in any country where the common-law system prevails, gave the plaintiff the right to turn his back upon the forum he had voluntarily chosen and drive his antagonist into the Federal courts.

In the case of Johnson *vs.* Monel, the plaintiff was a citizen of Iowa, one defendant was a citizen of Nebraska and the other a citizen of New York; the last was not served with process and did not appear; the case was tried in the State court of Iowa, but after the court had set the verdict aside the Supreme Court of the United States sustained the plaintiff in the privilege of further harassing the defendant by dragging him from the jurisdiction where he was first assailed into the far more expensive and inconvenient tribunal afforded by the Federal jurisdiction.

In the case of Insurance Company *vs.* Dunn (19 Wall., 214), the State jurisdiction was arrested in a more offensive manner to the dignity of the State court. The plaintiff in this case had a verdict and judgment thereon against the insurance company in the State of Ohio. The defendant applied in the State court for a new trial and filed a bond, which it seems in that State has the effect of vacating the judgment. And then the defendant turned its face to its next friend, defied the mandate of the court where it had voluntarily submitted to be tried, and before order to set aside was made applied to remove the cause under the act of 1867. The Federal judges held that there had been no final trial; that the application was in time, and that the suit was removable; and the Supreme Court of the United States nullified the judgment of the State court.

If you regard this ruling, so degrading to the State judiciary, flagrantly erroneous, what redress can you find? These courts have arrogated to themselves the power of determining their jurisdiction without regard to the opinions of the State courts. No matter to what extent the inordinate desire for judicial power may carry the Federal judges, the laws of Congress fail to provide a balm for the wounds ruthlessly inflicted upon the dignity and independence of the State courts.

Thus, as we see, non-residents and foreign corporations have two chances while residents only have one. The act of 1867 still remains in force and is not repealed by any subsequent legislation. It is supposed this law was enacted for the benefit of persons who had gone into the Southern States immediately after the war. If so, the era of good-will and peace, now so happily restored, admonishes us that no excuse remains for such a plain violation of the rights of the State judiciary.

ACT OF 1875 DELUGES FEDERAL COURTS AND IMPOVERISHES STATE COURTS.

The act of March 3, 1875, goes far beyond all previous acts and deluges the Federal courts with a flood of causes removable from the State courts, thereby crowding the Federal courts beyond their capacity and greatly increasing their cost, while the States are being left with large judicial machinery to rust upon a small amount of labor. The right of removal is enlarged by this act as to subject-matter irrespective of the citizenship of the parties, and in other cases to citizenship irrespective of the subject-matter. It removes the limitation prescribed by the judiciary act and prior removal acts, requiring one of the parties to the suit to be a citizen of the State where the suit is brought.

Whether the acts of 1866 and 1875 are constitutional I believe are still open questions with the courts. I am not aware that there has been a direct decision of the United States Supreme Court upon them, and although it would seem that any one comparing the act of 1875 with the provision of the Constitution upon which Federal judicial power is based could hardly believe the act constitutional, yet, if we are guided by the uniform decisions of those judges in the past on questions of jurisdiction, it can not be doubted that they will sustain the constitutionality of the acts which add to their judicial power.

It will, however, require some ingenious argument to give plausible coloring to the proposition that when the Constitution in explicit terms limits to cases "between citizens of different States" it shall be construed to embrace suits between citizens of the same State, as the act of 1875 contemplates. The act of 1866 sought to avoid this difficulty by dividing the suit in parts, but legislators had become sufficiently inured to violations of the Constitution in 1875 to ignore and trample under foot the rights of the State judiciary without hesitation or remorse. The construction given by the court to the original judiciary act when Marshall, Story, and Taney were on the bench would be against the jurisdiction, but their seats are filled with others now. Time will tell whether they understand the Constitution any better than their early predecessors.

ABUSES OF THE LAW OF REMOVAL.

But let us come to the examination of some of the abuses of this law which have become so oppressive to resident litigants.

The Federal courts by their decisions, and even by *obiter dictum* upon questions affecting their jurisdiction, have given to the language of the law very singular construction. In the long line of their decisions we find an almost unbroken current running in one direction, aggrandizing their power and magnitude.

CONSTRUCTION IN REGARD TO CITIZENSHIP.

In the interpretation of statutes as well as contracts we all know the rule is that when the language employed is plain and unambiguous there is no room for construction; but that rule seems to have been disregarded by the Federal courts in passing upon questions of jurisdiction, as will be seen by reference to the following instance: The acts of Congress authorizing the right of removal from State courts are based upon that provision of the Constitution which declares that the "judicial power shall extend to all cases of law and equity * * * between citizens of different States," &c.

Worcester defines a "citizen" to be "an inhabitant of a republic who enjoys the rights of a citizen or freeman, and who has a right to vote for public officers; as, a citizen of the United States." This would undoubtedly contemplate a be-

ing possessed of mental and physical faculties, of mind, flesh, and blood; a breathing, moving, creature of God, having a soul. When Taney presided the court held that a free negro of the African race whose ancestors had been brought and sold in this country as slaves was not a citizen within the meaning of the Constitution, and could not bring a suit in the Federal courts. And yet the Federal courts in a number of cases have held that a corporation, a mere fiction of the law, a fleshless, heartless, soulless thing, not a creature of God but a creature of man, is clothed with sufficient attributes of citizenship to remove a cause from the jurisdiction of State courts into the Federal courts.

In other words, for this purpose a corporation of another State, a railroad company, a banking company, a shipping company, is a citizen, and that such an organization under the laws of Russia, Turkey, or England is an alien and endowed with the privilege of defying and scorning State judicial power. Thus the subtle refinement of the constructionists have rendered necessary a new definition of the word "citizen" and "alien." Corporations were indebted for this superior privilege to the ingenious invention of the law-interpreting, not to the law-making department. This encroachment of the Federal judiciary is so far-reaching in its effects they have declared that a State is powerless to deprive a corporation of this right of removal, even where the corporations have made an agreement to waive the privilege.

By act of Congress in 1868 the right of removal is in express terms granted to corporations authorized by the laws of the United States. When we find the language used in the Constitution is "citizens" and "aliens," it is difficult to understand where Congress finds power to confer this power on "corporations."

They have lifted the corporation above and beyond the sovereignty of the State or the binding force of its contracts. They have made it an *imperium in imperio*. They hold that when petition and bond is presented to the State court for removal the State court has no power to refuse the demand for removal, that its rightful jurisdiction ceases *eo instanti*, that no order for removal is necessary, and that the State can do no subsequent lawful act affecting the case; and one distinguished Federal judge held that the State court could not even inquire into the sufficiency of the bond, but it may be robbed of its jurisdiction and the resident suitor be forced from its jurisdiction without even the privilege of a look into the sufficiency of the bond.

It was held by Judge Drummond, in Osgood *vs.* Chicago, &c., Railroad Company, that where the petition and bond for removal was filed with the clerk in vacation, without action or knowledge of the court, without any examination by the court of the sufficiency of the petition or bond, *ipso facto* deprived the State court of its jurisdiction. How considerate are these law-givers of a certain privileged class, who are relieved of the degradation of even appearing in the presence of the State tribunal!

In another case it was held that where the United States court refuses to return a cause to the State court improperly brought before it, the party can not return to the State court and proceed with his cause, but he must remain in the Federal courts and abide their final action. On the contrary, if the State court asserts jurisdiction, after a proper application for removal, the party does not waive his right of removal by remaining and contesting the case in the State court, and he may follow the case to the supreme court of the State, and if unsuccessful there he has the right to sue out writ of error in the Supreme Court of the United States, and upon the record, without examination of the merits of the case, the Federal court may reverse the judgment of the highest court of the State, with a mandate to reverse the judgment of the lower court, and order a transfer of the cause to the circuit court of the United States. These courts claim the power to stop and tie up the proceedings of a State court by injunction. Truly the State judiciary is made the sport and foot-ball of the Federal judiciary.

WHO WILL DECIDE THE CONFLICT OF AUTHORITY?

Suppose a Federal court should assume jurisdiction of a cause not contemplated by the statute and which clearly belongs to the State court? Some may say such action of the Federal court would be void and not binding, because they can only exercise jurisdiction where it has been conferred by the statute; but if the court should proceed to enforce their illegal decrees by its process and come in contact with the State jurisdiction, who would decide? Shall the decision be left to the physical forces employed by the sheriff and the marshal? Each of these jurisdictions under our system of government is independent and supreme within its legitimate sphere.

Such a conflict is not by any means improbable. The Federal courts have been heretofore unrestrained and with impunity have infringed upon the territory of the State courts; but I tell you that judges of these courts have seen the barriers of their rightful jurisdiction thrown down so often that they are becoming restless under these invasions, and may ere long feel that their solemn obligations to the people will demand resistance to the depredations and encroachments upon their lawful domain. If so, in the language of Story, who will decide the conflict? In such a conflict the triumph of the Federal courts will be a subversion of the Constitution; on the other hand confusion and disorder may follow. The law authorizing the removal of causes is the great source of this danger. I propose by my amendment a simple remedy. Repeal this law and make plain the boundary of these jurisdictions. Thereby you will prevent the Federal judiciary from invading the State courts and taking from their dockets causes of which they have acquired rightful jurisdiction.

The Federal courts have long enough ignored, defied, and commanded the State courts as tribunals of the most inferior character. They are in no sense inferior courts when exercising their legitimate functions.

THE FEDERAL JUDICIARY NO LONGER A SANCTUARY IN POLITICAL STORMS.

Sir, the judicial department of this Government has in the remote past been regarded as the sanctuary for the protection of individual and State rights. Amid the darkest hours of political storms in this country, when the executive and legislative branches of the Government seemed guided in the performance of their duty by mere prejudice and party passion, the patriot has looked with hope and confidence to the Federal judiciary as the guardian of liberty and law, as the pure and impartial power to stay the hand of mad ambition and of those who forget the Constitution and the Republic.

But, sir, he is pained of late years with apprehensions that this department of the Government—the sheet-anchor of his hopes—is erecting a centralized power upon the ruins of the Republic. Every year witnesses with sorrow and terror the fences erected by the fathers around the sovereignty of the States thrown down by judicial construction—sees one by one the reserved rights of the States annulled and annihilated. They who formed this Government did not dream that when they had shaped the judicial power in the Constitution they had forged a weapon which would destroy the form and life of that Government for which they had suffered and labored. Had they conceived such a peril to the Republic possible they would undoubtedly have placed guards around the State judiciary in language too plain for misapprehension.

In a letter to Judge Johnson, dated March, 1823, Jefferson wrote:

"There is no danger I apprehend so much as the consolidation of our Government by the noiseless and therefore unalarming instrumentality of the Supreme Court."

To Mr. Corry he wrote, October, 1823:

"At the establishment of the Constitution the judicial bodies were supposed to be the most helpless and harmless members of the Government. Experience, however, soon showed in what way they were soon to become the most dangerous; that the insufficiency of the means provided for their removal gave them a freehold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the public at large; that their decisions nevertheless become law by precedent, sapping by little and little the foundations of the Constitution and working its change by construction, before any one has perceived that invisible and helpless worm has been busily employed in consuming its substance."

When the Federal Constitution was before the Virginia State convention for ratification or rejection, Patrick Henry uttered this prophetic language:

"I see arising out of that paper a tribunal that is to be recurred to in all cases where the destruction of the State judiciary will happen, and by it the State courts will soon be annihilated."

The fears which haunted Patrick Henry and Thomas Jefferson in the evening of their lives are being realized now in the tendency of the Supreme Court and other branches of the Government to centralization and in destruction of sovereign and reserved rights of the States. If permitted to go on without restraint our system of government will in truth be revolutionized, and the change from a republic to a monarchy will be made easy. I deplore this. I believe the reserved rights of the States the most precious of the rights of the people; they furnish the best safeguard for the protection of the life, liberty, and property of the citizen. Let us stay the threatened dangers by saving our State judiciary from annihilation. Do not increase the Federal judiciary, lest it will like Aaron's rod eat up the rights of the States.

INCONVENIENCE OF FEDERAL COURTS.

The great inconvenience occasioned by this law to residents of these States furnishes a sufficient reason to warrant the adoption of this amendment. That profound moral philosopher, Paley, in treating of courts, said:

"If the court be remote and solemn it becomes by these qualities expensive and dilatory. The expense is unavoidably increased when witnesses, parties, and agents must be brought to attend from distant parts of the country, and where the whole judicial business of a large nation is collected in a few superior tribunals, it will be found impossible, even if the prolixity of forms which retards the progress of causes were removed, to give a prompt hearing to every complaint or an immediate answer to any."

In our own country and times, where localities are remote from points in which the Federal courts hold their sittings, these laws have operated in many cases to defeat the ends of justice. The section in which I reside is about two hundred and seventy miles from the State capital, where the United States courts are located, to which our causes are removed when taken from the State courts. I can say of my own knowledge that just and meritorious causes have been abandoned against insurance companies for the reason that the plaintiffs could not bear the oppressive expenses of litigation so far away from home. This is a denial of justice to the poor.

OPPRESSION BY CORPORATIONS.

The practice has perhaps become universal that litigious insurance companies, even in cases where a widow sues in a State court for the life policy of her deceased husband or a man sues for the policy on his dwelling destroyed by fire, these companies resort to the privilege of removal. They shield themselves under the protecting wing of the Federal courts, force its adversaries to bring their witnesses, and incur the enormous expense attending the slow process of securing a trial in the overcrowded Federal courts. This vexatious expense and delay enable wealthy corporations to crush many holding just claims against them and force them to either relinquish their suits altogether or compromise on such terms as are dictated by the agents of their powerful and heartless antagonist.

RIGHT OF TRIAL WHERE LITIGATION ORIGINATES.

When the right of trial by jury—that bulwark of civil and political liberty—was established in our parent country it became a part of the law that the trial should be had in the county where the offense was committed, and so jealous were our ancestors of a subject so vital to the security of the citizen they went still further and required that the jury itself should come from the vicinity where the crime was alleged to have been committed. Except in transitory actions the same reasoning with regard to this applies to civil as to criminal proceedings.

Judge Story has said that—

"One of the fundamental objects of good government must be the due administration of justice."

Is it not vain to claim that we have such an administration when the private rights and property of the citizen is left to the avarice and selfishness of powerful corporations and wealthy non-residents? Can it be of any advantage to the widow and children of the deceased husband that she has a right of action in a court beyond her reach for the policy on the life of her deceased husband? From the scanty earnings of a life of toil he may have promptly paid every installment of the premiums. He may have suffered self-denial; his wife and children may have endured privation and want in order that if death should remove their supporter a legacy would be left to keep away the lean wolf of hunger from the home of his bereaved family.

Now, when the sod has been heaped upon his grave, is it any consolation for the helpless family to say to them if they have the means to employ lawyers, pay witness fees and expenses far away from home, follow the case from the State to the United States circuits, and then perhaps a thousand miles or more away to the Supreme Court at Washington, where it must lie at least three years in a contest with a corporation having millions under its control? Such a law, sir, is a solemn pageantry, a mockery of the widow in her grief-stricken and lonely condition. It has been said by a wise man, a profound legal thinker, an able exponent of constitutional law in this country, that—

"If the people are enlightened, honest, and zealous in defense of their rights and liberties it will be impossible to surprise them into a surrender of a single valuable appendage of the trial by jury."

I appeal to you now to regain what has been surrendered of the "valuable appendages" of having the trials, juries, and courts among the people. It is only in the State courts that justice can be obtained without delay. The right to a speedy trial comes to us from Magna Charta. "*Nulli vendemus, nulli negabimus, aut differemus rectum vel justitiam.*" "We will not refuse or delay to do justice" is its language.

Sir Edward Coke, in explaining that principle of Magna Charta, said:

"Therefore every subject may take his remedy by the course of the law and have justice and right for the injury done to him, freely and without sale, fully without any denial, and speedily without any delay."

Can you say that we enjoy this right so legitimately inherited from a brave ancestry who at the peril of their lives extorted it from a tyrannical king in a rude and dark age? Our title to it is six hundred years old. Is the wisdom and courage of this enlightened century unable to maintain this great charter in a land of freedom?

Can it be said justice is dispensed freely, fully, and without delay, where power is given to an arrogant and powerful litigant, in defiance and contempt of the jurisdiction of the courts, in Illinois or California to remove a cause from the docket and force its feeble opponent into another jurisdiction two hundred miles away, and, if poverty and despair have not compelled an abandonment of the suit, carry the cause to the Supreme Court in this city, one thousand or three thousand miles away, and still further clog the wheels of justice with three years' delay?

Such a law places in the hands of the mighty the dreadful weapons of poverty and despair in their battle with the poor and unfortunate. Some may say this is justice, but many who are not altogether without wisdom will call it more in

the nature of mockery and cruelty. One of the prime objects for which governments are instituted is to protect the weak from the injustice of the strong. Shall we tolerate the reversal of this doctrine by permitting the Government to be used as an instrument of oppression in the hands of the strong?

PLANS FOR INCREASE OF FEDERAL JUDICIARY.

The Attorney-General has recommended in his last annual report that the number of judges on the Federal bench be increased, and that an intermediate appellate court be established in order that the overcrowded condition of the Supreme Court may be relieved. This is also advocated by able and experienced gentlemen in another body. I am opposed to this scheme and can not agree with its promoters. It does not do away with the enormous expense of litigation in the Federal courts, but will add greatly thereto. It will largely increase the expenses of the Federal judiciary. God knows we have enough life officers in this Republic drawing salaries from the earnings and labors of the people. Confine the United States courts to the legitimate limits of their jurisdiction as designed by the founders of the Government, and the judges will not complain of being overworked or of the necessity for increase on the bench.

REPEAL OF BANKRUPT LAW WILL RELIEVE THE COURTS.

An act has been passed within the last few days which will relieve these courts of a very large portion of that character of business now overcrowding them. I refer to the repeal of the bankrupt law. A very large portion of their work during the last ten years has been due to the bankrupt law. I have not had access to the statistics which will show the number of cases of which the courts will be relieved by the repeal of the bankrupt law, but a statement was made in another place the other day upon which we may base some opinion.

From a statement furnished by the clerk of the northern division of Illinois, it was ascertained that out of 4,606 on the dockets of the various branches of the court in that division on May 1 last, 1,167 were bankruptcy cases, being about one-fourth of the causes in court. If this is a fair average for the other courts of the United States, by this means the work of the Federal courts will be diminished one-fourth. The amendment I offer in connection with the bill introduced from the Judiciary Committee will undoubtedly relieve the courts of at least an additional one-fourth or one-third of its business.

LITIGATION REDUCED ONE-HALF.

Pass this bill and amendment, and you will complete the legislation that will diminish the work of these courts at least one-half and thereby reduce the enormous expenditures of the Federal judiciary and remove all cause for the creation of new judges or the machinery of the courts. Delay will be avoided, and will have secured that object so greatly desired in the administration of justice, promptness and cheapness.

ECONOMY OF THIS MEASURE.

Let us discuss this question for a while from the standpoint of economy. Surely no one will complain of me for treating the subject in this view when the distress in the country and the heavy burden resting on the tax-payers are considered.

I have obtained from the Chief of the Bureau of Statistics a statement of the cost of the United States courts which should arrest the attention of every conscientious legislator who desires to lop off unnecessary expenditures of public money.

The table which I have shows the expenditures of the United States courts for the years named as follows:

1850	$497,558 54
1860	936,477 61
1865	1,192,272 84
1870	2,162,109 82
1875	3,332,182 27

Three millions were appropriated for the fiscal year of 1877, but the Attorney-General reports that it was inadequate to meet the expenditures of these courts, and a large deficit was called for.

It is said "figures do not lie." They tell us that in no year during the seventy-seven years from 1789 when the original judiciary act was adopted down to 1866, when the first act was passed enlarging the jurisdiction of the Federal courts by widening the way for transfer of causes from the State to the Federal courts, did the expenses of these courts reach $1,200,000. And they further show from that time onward these expenses have grown with marvelous rapidity as each additional act of Congress has been passed. When only six years had elapsed since the act of 1866 went into operation the expenses of these courts (1873) had increased threefold.

What has been the effect of this legislation on the State courts? Let lawyers practicing in them give the answer. I know the answer from the West, and perhaps from the South, will be they have been rapidly depleted every year since the acts I have mentioned went into effect. It is rare that a suit is retained on their dockets in which corporations are parties.

TRANSPORTING JUDGES FROM OTHER CIRCUITS.

If I had not already consumed so much of your time I would dwell upon an abuse which has grown up in recent years of transporting persons from other circuits and appointing them judges in circuits where they have never had a residence.

Almost every judge who sits on the bench in the fifth circuit is an importation. That circuit embraces the States of Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas. The judge on the Supreme Bench who has charge of that circuit is a resident of New Jersey. A judge ought to have some acquaintance with the people among whom he presides and should undoubtedly be thoroughly conversant with the systems of jurisprudence established in the States embraced in his circuit. When we remember that the civil law purely prevails in Louisiana, and to a large extent in the States of Louisiana, Florida, and Texas, is it not passing strange that no one could be found in all those States fit to be trusted with that appointment, and that it was necessary to select one of the common-law lawyers of New Jersey, a State where the common law prevails, to represent those States on the Supreme Bench? It seems to me it would have been better to select one familiar by practice with the civil law and the treaties made with the mother governments of those States, and their statutes. There are only nine circuits in the whole Union, yet the judges representing two of these circuits on the Supreme Bench have been appointed from Ohio and hold their residences there to-day. Three of the supreme judges have charge of circuits in which they do not reside.

In order to afford greater protection to the people of the States, I would, by legislative enactments, stay the hand of the power which forces litigants from the local courts before a judge on the Federal bench, who is not only a stranger to the people, but a stranger to some extent of the systems of jurisprudence he is called upon to administer.

THIS MEASURE BRINGS THE ADMINISTRATION BACK TO FUNDAMENTAL PRINCIPLES.

This bill and the amendment seek to bring the administration of law and the Government back to fundamental principles.

Those who formed the organic law of my State made this injunction a part of the constitution: "A frequent recurrence to fundamental principles of civil government is absolutely necessary to preserve the blessings of liberty." This is language worthy of a place alongside of that found in the bill of rights of the Old Dominion: "That no free government can or the blessings of liberty be preserved to any people but by a firm adherence to justice, moderation, temperance, frugality, and virtue, and by frequent recurrence to fundamental principles." Let us, then, return to fundamental principles. Let there be equal and exact justice to all.

But it will be a delusion and a snare if it shall not be so dispensed that it may be within the reach of all. History has perpetuated the infamous memory of Caligula, who wrote his laws in very small characters and hung them high upon pillars, so that the people could not read them. Beware lest we be accused by the historian of making justice so dear and difficult of attainment that its blessings are only within the reach of the rich and powerful. Let it not be said of us as was said by the poet of another land: "That its laws grind the poor and the rich men rule the law."

You do not desire that it shall be said of our courts, as was said by the immortal bard of Avon of the courts of his day—

> "Plate sin with gold,
> And the strong lance of justice hurtless breaks,
> Arm it in rags, a pygmy's straw doth pierce it."

Justice is more easily and quickly obtained by the poor in the State courts than in the Federal courts. This bill and amendment will promote liberty, promote justice, promote economy, and promote the general welfare.

I trust the members of this American Congress will give careful, intelligent, and conscientious consideration to a question fraught with such deep import to the autonomy of the States, the sovereign and primary rights of the people, and their convenience, peace, and fortunes.

Before leaving this question I beg leave to call attention to the following extracts from a pamphlet recently issued by Mr. William M. Meigs, of Philadelphia, who, although writing several years after my speech above quoted and taking similar ground to that occupied by myself, yet it seems that he had not seen my remarks but had been led by his own experience and observation to substantially the same conclusion in his search for relief of our Supreme Court. I beg leave to quote from his pamphlet the following:

THE RELIEF OF THE SUPREME COURT OF THE UNITED STATES.

The question of the relief of the Supreme Court of the United States has been much discussed for a few years and has excited not a little interest. The accumulation of old cases hanging on from term to term, and growing greater annually in number from the inability of the court even to dispose of the new cases yearly reaching them, shows plainly that, for the benefit of suitors, even more than for the relief of the judges, some change is imperatively demanded. This is doubtless a fact in the problem which few will question—something must be done. But, when we come down to the means of attaining the end, the question becomes much more difficult. When the American Bar Association discussed the subject at Saratoga in 1882 it appeared that irreconcilable differences existed not only in the committee which had been appointed to consider the subject, but in the body itself as well; and the resolution recommending the plan of a court of appeals was only carried by 39 votes to 27. The question has been the subject of much discussion since then in different parts of the country, and there have been introduced into Congress more than a dozen bills, many of them radically differing from each other. In the midst of such great variety of opinion, it is entirely impossible to say what will be the outcome of the matter, though it may be presumed from the interest manifested that, within a few years at most, some important legislation on the subject will be passed.

The plans, which appear to receive the most support are, (1) the establishment of a court of appeals, wherein shall be finally decided many of the cases which now reach the Supreme Court; and (2) the division of the court into sections, which shall sit separately, the decisions in all cases to be rendered by the whole court. The first-named or Davis plan seems to meet with most favor, and its features occur more or less markedly in several of the pending bills. The very serious objection that it would far from conduce to uniformity of decision has been met by other bills embodying a part of its plan.

It is not our purpose, however, to enter into any elaborate examination of the different bills before Congress, for we are unable to see that any such great change in the matter is needed as is generally advocated. We think it can be shown that by repealing a few of the acts giving jurisdiction to the Federal courts in certain specified classes of cases, it can be made easy for them to dispose of their whole annual accession and in the course of some years to bring the lists again down to a condition where they can be cleared up each year. If this is possible, without depriving suitors of rights which they ought to have, we assume that it is desirable. There can be no question that, by itself alone, the creation of a new court is not to be wished. The expense of the body is a fair argument against it, unless it is a real necessity; and, more than that, it is certainly the case, and it seems to be conceded, that the present constitution of the Federal courts is preferable to the proposed new one, with a court of appeals intermediate for some cases. One of the main objects to be obtained is the avoidance of those great delays which are a practical denial of justice in many cases; and it should not be forgotten that, whatever plan for the court of appeals might be fixed on, some, at least, of the cases would have to drag their weary length through both the court of appeals and the Supreme Court before the unhappy suitors would at length be released. This is not desirable. The present plan, if it can do the work, is certainly preferable, and thus much, we believe, is admitted on all sides.

The growth of the Federal judicial business was for many years very gradual, the cases on the lists of the Supreme Court being decidedly few in number until the middle of the century; not until 1858 did they even reach 300, and in 1870 for the first time they exceeded 600. In 1875 there were 974 cases on their list, in 1876 1,000, in 1880 1,202, in 1881 1,013, in 1882 1,026, and in 1883 1,070. The total average annual accession for the last ten years has been about 425 cases, the new cases docketed to October, 1881, numbering 399; to October, 1882, 422, and to October, 1883, 419. The number of cases annually disposed of varies of course not a little, but it averages 360. It is therefore clear that their business has grown unmanageable only within the last fifteen years, and it is further clear that the great number of cases on their docket is liable to be not a little misleading; the vast majority of these cases are *remanets*, reaching back not a few years. The average annual accession exceeds the number of cases they are able to dispose of by about sixty-five (a very little over 18 per cent). This increase of business is owing to different causes, but there is one which stands out specially prominent. Judge Strong (North Amer. Rev., cxxxii., p. 438) pointed out the causes at length in his article written shortly after he left the bench, and the same subject has been recently examined more elaborately by a committee of the Law Association of Philadelphia. They found that over one-third (34.5 per cent.) of all the cases found their way to the Supreme Court exclusively on the ground of citizenship, and they at once saw that here was an opportunity for reduction.

Others also have seen the same thing, and several of the pending bills propose a reduction by closing a part of this avenue. But can not more be done? Why not cut off the whole of this branch of jurisdiction at once, and thereby relieve the court from 34 per cent. of its labors? This would at once put them on their feet again, and enable them to do more than dispose of the annual accession of new cases, for we have already shown that a relief of slightly more than 18 per

cent. is all that is imperatively demanded. Judge Strong has considered the expediency of more or less radically altering the classes of cases to be decided by the Supreme Court, and he lays special stress (*ubi supra*, pp. 446, 447) upon the difficulty and comparative want of importance of citizenship cases.

It has been suggested, we believe, that it would be unconstitutional, but this can hardly be contended. The provision of the Constitution certainly does not, *proprio vigore*, vest the full extent of the Federal judicial power in the courts which Congress may establish, and confer upon them power to exercise it without legislative regulations. It can not have this meaning, for an unanswerable question would be which of the inferior courts is to exercise the jurisdiction and under what regulations? Though the judicial power does extend to controversies between citizens of different States, yet Congress need not call it into being, just as it need not pass a bankrupt law, declare war, or execute other powers conferred by the Constitution. And it is a well known fact that for over eighty-five years Congress exercised but little comparatively of its power in conferring jurisdiction in citizenship cases, and this was never held to be unconstitutional.

It is therefore apparent that more than one-third of the cases reaching the Supreme Court can be cut off by this simple process, and there are strong reasons why it should be done, and we, at least, fail to see any valid argument against it. This class of cases is one that gives special and peculiar trouble to the court, owing to the fact that it calls upon them to examine so many systems of law. The lawyer who has more than a faint acquaintance with the law of two or three States is not only a man of learning, but must have been endowed with a most rich measure of that precious gift—memory. The most learned of us is in reality not competent alone to undertake and conduct a law proceeding in a State where he is not at home. He may have the theory perfect and at his fingers' ends, but some wretched little point, which the lawyer of the *locus* would be entirely familiar with, will miss him, and he will soon be in a snarl. So difficult is it that at least some lawyers decline the practice entirely. Yet the Supreme Court is called upon to examine into the law of no less than forty-seven different jurisdictions other than that properly of the United States. The difficulty of this must be enormous and hardly capable of exaggeration; we all experience trouble enough in settling the law of one jurisdiction.

Probably the judge arises from the argument of a case of this nature, after the conflicting and not always precisely accurate statements of the law by counsel, with but the vaguest knowledge of what the law really is. He has, then, subsequently to spend laborious hours in searching through statutes and law reports which are new to him; and, in this labor, a portion at least of the usual incentive is wanting, for he is not working in his own field nor is he spurred on by the knowledge that his work will be of daily use to him in the future. (See Judge Strong's article, *Id.*, pages 440–446, where the difficulty in this class of cases is specially emphasized). Then there is this additional trouble that, as the Supreme Court does not universally, in cases of this nature, follow the law of the State, their labor is not at an end when they have discovered the latest State decision upon the subject; but they must make an elaborate examination and decide whether there has been a conflict of decision in the State upon the subject, and what was the law at the date the plaintiff acquired his rights; and then finally whether on the whole case it is one where, under their own decisions upon this very difficult subject, they will feel obliged to adhere to the latest State decision or will decline to follow it.

We think these facts show that the jurisdiction depending exclusively on citizenship involves great and peculiar trouble, and it would seem, therefore, that the decision of a hundred such cases must demand not a little more time and labor than does an average hundred cases of strictly Federal law. Therefore, as the citizenship cases constitute slightly more than a third of all their cases, we should, by abolishing root and branch this source of jurisdiction, reduce their labor considerably more than a third. This is a vast reduction, and the only question that remains is the advisability of the step. Is there any reason to-day for the court's being troubled with this mass of cases which do not belong to the system of jurisprudence which it is their function to erect? We can not see that there is. The reason for the constitutional grant of jurisdiction in such cases is well known and was doubtless a hundred years ago a very valid one, but it would seem to have no vital force any longer. At the time the provision was adopted we were emerging from a condition in which each State had been actively engaged in erecting its own walls of restrictions, with the view of helping itself and injuring its neighbors, and there is no doubt that there were strong feelings of jealousy and distrust among the different States of the confederation.

This condition of affairs was the very reason for the making and adoption of the Constitution, and it is highly natural, therefore, that it contained the provision. There would likely, otherwise, have been frequent bickerings and discontents about verdicts and decisions going against citizens suing in the States where they did not live, and one of the very purposes of the Constitution would have been frustrated for a time. But the course of nearly one hundred years has changed all this. It is hackneyed now to speak of the nearness of all parts of the country to each other and of the closeness with which we are bound together in all the affairs of daily life, but it is only the more true because hackneyed. It is undoubtedly the case that San Francisco is effectively as near to us to-day as Boston was to Richmond a hundred years ago. The New Yorker is vastly better acquainted to-day with the Chicagoan than he then was with the man from New Haven. We are all closer together in point of mere time, and in other matters our closeness to each other is even greater. And this constant intercourse and knitting of interests has had that effect which was to be expected.

We have become better friends, more similar in manners and customs, more willing to trust each other, and we do not now look with staring eyes at the citizen of another State as he passes us in the street or we deal with him. On the contrary, we daily see and deal with many of them, without even knowing it, or caring, if we do. It may fairly be said that that prejudice which was the cause of the constitutional provision is a thing of the past. If it was then, it is no longer the case that a citizen of any State need fear that he will fail of receiving a fair trial, let his suit be in what State you please. We must not forget that, in the Federal as well as the State court, he will meet with a jury of citizens of another State than his; and if the change proposed is made, the only difference will be that he will have his trial presided over by a judge who is also a citizen of another State than he, which may possibly not be the case when he has the right to sue in the Federal courts. We should be loath to believe that this would put the party from a distance in any peril of not getting an impartial trial, nor do we think there is any evidence whatsoever that such would be the case. If we are right as to the question of prejudice, there is certainly no valid reason why the jurisdiction should not be abolished.

If it is said that their jurisdiction is necessary in such cases on account of questions of commercial law; the answer is plain that by far the greater number of such cases—and often growing out of a transaction identically the same as that which it is argued the Federal courts should decide—must inevitably be subject exclusively to the courts of the State; and that system sadly lacks uniformity, which holds a defendant not liable on one contract and yet liable on another, when the sole difference between the first and the second is that the parties to the second are entitled to sue in the Federal courts. And in the vast majority of such cases, the Federal courts are, by universal admission, called upon, merely owing to adventitious circumstances, to administer the law of another forum. It is certain that they can not exercise this function any better than the courts of the State, whose very breath of life is the law in question. As to the comparatively few cases of this nature in which they decline to follow the law of the State as expounded by her tribunals, it is submitted that their soundness, as also their expediency, are matters of grave doubt.

This line of decision has given rise to another great element of uncertainty as to party's rights—as well citizens as non-citizens of the State—and has unquestionably not attained any such degree of definiteness as enables counsel to advise on the subject. The decisions are undoubtedly very conflicting; the question is one of the greatest difficulty and obscurity in itself, and the court has not succeeded in elaborating any system out of it, which offers a reasonable prospect of a scientific basis. We think, therefore, that even those who support this class of decisions must feel that their importance is not sufficiently great to render it worth while to yield up the great prospect offered of relieving the court without the creation of new courts and complicated machinery. It is apparent that this one change will make such a reduction that there would probably be no necessity for several decades, at least, to erect a new court, and he is an unwise physician who applies radical remedies before there is an imperious necessity. The country is certainly growing with tremendous strides, and it is likely that litigation will increase with the growth of population, but we can by no means say that it will grow in anything like the same proportion; and if one simple remedy can enable the court at its present rate to dispose of considerably more than the annual accession, it is surely not advisable to apply such heroic remedies as are advocated. The future is so uncertain that it is not best to make great changes when a small one will remedy the present evil.

Let us rather provide for our present needs by simple means, and not legislate in the dark for a condition of affairs which is, maybe, to exist several decades from the present time. Who can say what effect the vast changes going on in our midst in monetary affairs and commercial relations will have upon the law business of the country? Who can say what will be the effect of that tendency to centralization of business, which is one of the most striking features of the day, and which is but beginning to have its effect? Where, in the past, a thousand transactions were performed by as many different people, they are often now performed in an hour or two by one individual or officer of a corporation. And, whatever we may think of the corporations and their modes of doing business in certain aspects, there can be no doubt that, in the long run, there must be less litigation growing out of a given number of cases operated by one practiced hand than by the many.

The one hand is soon far more skillful than is the average of the many, and is, moreover, likely to act under the guidance of better legal advice than are the many. There can be no doubt, we take it, that the tendency of companies for the insurance of titles to real estate is greatly to lessen litigation on that subject, and the same may be said of all bodies of a kindred nature. Such bodies are daily springing up among us, and have undoubtedly had a marked influence in some places in reducing law business. Is it not to be presumed that they will continue to increase in number and in the classes of subjects to which they apply, and that they will spread over the whole country? This is not the place to go into these questions at length, and we merely cite them as elements on which we can put our hands, and which we can see must have a marked operation as a set-off to the tendency to increase of judicial business from growth of population. Others could be named, and there are probably a thousand similar elements, which we can not even see, let alone know their effects; and we submit again therefore, that it is not the part of a wise statesman, in the midst of such uncertainty as to the future, to advocate radical change until the time arrives when it is apparent that some fundamental measure is the only means of attaining the needs of the then present.

Besides the citizenship cases, there is at least one other source of jurisdiction the necessity of which it is difficult to see. We refer to cases from the District of Columbia. These reach the Supreme Court in large numbers, constituting a little over 5 per cent. of their total business. Their removal would therefore be a marked relief, and a bill has been introduced into the Senate with that view by Mr. INGALLS. It is not easy to see why the time of the highest Federal court should be wasted in deciding miserable disputes growing out of contracts to pave the streets of Washington, or to hear cases depending exclusively upon the old Maryland law, whenever the sum in dispute exceeds $2,500 and the defeated party is of a litigious nature. The only *desideratum* would appear to be that these cases should be decided by a competent tribunal under the control of Congress, and with a revisory body. The supreme court of the District certainly fills these requisites. The passage of the Ingalls bill would therefore seem to be highly advisable.

Territorial cases involving more than $1,000 constitute another class of cases, which seems to us out of place in the Supreme Court, though we speak with much diffidence on this subject, as no bill has been introduced to cut off this source of cases, and as there may be some controlling reason for the existence of the jurisdiction of which we are not aware. The Territories must sooner or later elaborate a system of law for themselves as States, and it would probably be well for them to begin early and not to enter the Union as States without an "unwritten law" based on law decisions of their own. Of course all questions growing out of their organic law would necessarily reach the Federal Supreme Court as involving the meaning of a United States statute, but why questions upon the law of negligence or of emblements and kindred subjects in a Territory, should be permitted to make a drain upon the time of the Supreme Court, when that time is so imperatively needed for other things, we are at a loss to see. The review they already have in their own supreme courts ought to be enough for their comparatively unimportant business. The cases from these courts constitute a little more than 4 per cent. of all the cases in the United States Supreme Court, and it would, therefore, doubtless be quite within bounds to assume that, if this branch were cut off, it would make a reduction of 2 per cent.

The jurisdiction conferred upon the district courts (and thence indirectly to the Supreme Court in error, when the matter in dispute exceeds $5,000) by the fifteenth clause of section 563 of the Revised Statutes of all suits by or against national banks also offers an opportunity for reduction. There is no good reason why an ordinary suit depending entirely on State law (*e. g.*, a suit on promissory note or upon mortgage) should take the time of the Federal courts simply because a bank is a party; and the jurisdiction in such cases could easily be taken away, leaving questions of the interpretation of the charter or the powers of the corporation under the United States laws to reach the Supreme Court on other well-known grounds. The cases by or against national banks constitute a little less than 5 per cent. (4.73), and this ground of relief, it may therefore be assumed, would remove from 1½ to 2 per cent. at least of the cases, another very material reduction.

We think we have shown conclusively that the needed relief of the court can be attained in the way proposed, without the creation of any new court whatsoever, and without in any way damaging either the court itself, the rights of suitors, or the interests of the Government; and surely, if this be so, it is immeasurably the preferable mode. The measures proposed would enable the court in the course of not very many years to dispose of all their arrearages, and, even if it is thought that those arrearages should be cleared up more rapidly, it would be very easy to create a commission for that purpose. Such a body could be arranged upon the plan of one of the pending bills, and all the cases now on the list which do not involve a question distinctively of Federal law be referred to it for its final decision, with such other regulations as might be thought best. But even this temporary new court does not seem necessary or even expedient.

Summary: Number of new cases per annum, 425; number of cases decided per annum, 360.

The relief of the court from the citizenship cases only would reduce the new cases per annum to two hundred and seventy-nine, and thereby enable them to dispose of as many as eighty-one old cases each year; and the list would not become unmanageable again until the annual accession of cases increases by from one-quarter to one-third.

Their relief from citizenship and District of Columbia cases would reduce the new cases per annum to two hundred and fifty-eight, and enable them to dispose of one hundred and two old cases each year; and the list would not become unmanageable again until the annual accession of cases increases by from one-third to one-half.

Their relief from citizenship, District of Columbia, national bank, and Territory cases would reduce the new cases per annum to two hundred and forty-three, and enable them to dispose of one hundred and seventeen old cases each year; and the list would not become unmanageable again until the annual accession of cases increases by nearly one-half.

WILLIAM M. MEIGS.

PHILADELPHIA.

The Labor Question in the Present Congress—What Has Been Done and What Ought to Be Done.

SPEECH

OF

HON. ALBERT S. WILLIS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1884.

The House having under consideration the bill (H. R. 2350) to prohibit the importation and immigration of foreigners and aliens under contract to perform labor in the United States, its Territories, and the District of Columbia—

Mr. WILLIS said:

Mr. SPEAKER: I recognize the fact that the maximum of temperature on this floor is the minimum of patience on the part of the members. I shall therefore be very brief in what I shall say. I congratulate the committee, I congratulate the country, upon the prospective speedy passage of this bill. It touches interests wide as humanity; it vitally concerns every workingman, every wage-laborer in the land.

IMPORTANCE AND NECESSITY OF SUCH LEGISLATION.

The need and importance of this and similar legislation are known to all. By the last census the total number of workmen in the United States was 17,392,099. Over one-third of our whole population, therefore, will be affected by any bill which undertakes, as this does, to regulate the importation of labor. Not only is this large number of our people interested in such laws, but their need of such legislation has grown greater with each year of our history. Rapid increase of population, crowded thoroughfares of business, and wonderful inventions of labor-saving machinery mark our material progress, but the welfare and comfort and contentment of the great majority of our people have not made equal progress. A few men like Gould and Vanderbilt have become billionaires; but nine-tenths of our people still find it a hard task to make both ends meet. The rich have become richer and the poor poorer. Men of moderate salaries find it more and more difficult to live in comfort and independence. Our progress has inured to the benefit of the few and the injury of the many. In a republic the true maxim of legislation is the greatest good for the greatest number. The pending bill comes within that maxim. It proposes to remove one of the greatest dangers which now threaten the workingmen of our country. Its passage will make their condition of life more prosperous, happy, and hopeful. Its urgency therefore requires no argument.

THIS CONGRESS A FRIEND TO WORKINGMEN—THE LABOR COMMITTEE.

This urgent appeal Congress has heard and heeded. Nor is this the only evidence of the growing importance of questions connected with the labor interests of our land. In a most signal manner these interests have been recognized by the present House of Representatives. In the very first days of its sittings, upon the motion of the distinguished gentleman from Missouri [Mr. O'NEILL] this House created a new committee—known as the Committee on Labor—and made it their duty to investigate and prepare legislation upon "all matters relating to labor." For many years we have had committees on "banking and currency," on "commerce," on "railways and canals," on the "militia," on "naval affairs," and upon numerous other subjects demanding attention and legislation. This, however, is the first Congress which has appreciated the magnitude and importance of the questions relating to the industrial classes, and as the result we have now a committee on "labor." If there was any doubt as to the propriety and necessity of such separate committee it has been completely dispelled by the diligent and successful manner in which its duties have been discharged.

BUREAU OF LABOR STATISTICS.

The first measure which the Committee on Labor presented to our consideration was one establishing a bureau of labor statistics. The Committee on Education and Labor, of which I was a member in the last three Congresses, had carefully investigated the nature and necessity of such legislation. As the last Congress failed to enact a law upon the subject, I introduced a bill (H. R. 645) in the beginning of the present session. The honorable chairman of the Committee on Labor [Mr. HOPKINS] and other gentlemen introduced similar bills. The Committee on Labor promptly reported a bill, and the House having with equal promptude given it a day for consideration, it was passed, and is now awaiting the signature of the President. I hope no material amendment was put on by the Senate. The bill as it left us was acceptable to those whom it was specially intended to help, and their judgment is worth much in such a matter.

The establishment of such a bureau is not a new thing in American legislation. As far back as June 23, 1869, the State of Massachusetts passed a law establishing a bureau of statistics of labor.

NATURE AND BENEFITS OF STATISTICS.

The scope of its work was similar to that provided for in the bill which we passed and is best explained in the words of the law:

The duties of such bureau shall be to collect, assort, systematize, and present in annual reports to the Legislature statistical details relating to all departments of labor in the Commonwealth, especially in its relation to the commercial, industrial, social, educational, and sanitary condition of the laboring classes, and to the permanent prosperity of the productive industry of the Commonwealth.

The good results which this bureau accomplished in Massachusetts are well known. Some of the most valuable laws regulating the relations between labor and capital and correcting some of the flagrant abuses and evils of the struggles between them owe their origin to this bureau. So successful and beneficent were its operations in that State that New Jersey, Ohio, Pennsylvania, and several other States—twelve in all—have established similar bureaus. Congress has now provided a bureau which will collect such statistics in all the States and Territories, so that we will soon have authentic and full information from all parts of our Union upon all the important labor questions of the day. Among other facts, this bureau will tell us the average earnings of all persons employed in our mechanical and manufacturing industries; the wages of laborers, skilled and unskilled; the cost of living; the effect upon wages and production of the reduction of the hours of labor; the condition of tenement houses; the causes and effects of strikes; employment of convict labor; the distribution of wealth, as shown in the ownership of real and personal estates, and in the deposits in our savings-banks.

Such information will be invaluable in determining what within the province of Congressional legislation can be done to secure peace and prosperity to the industrial interests of the country. We must know the nature and extent of evils before we can make laws to remedy them. The creation of a permanent bureau to collect such statistics is therefore a great step toward the correct understanding and proper solution of the great industrial problems of the hour.

IMPORTED LABOR A CRYING EVIL.

But, Mr. Speaker, while there are some questions in this connection which may await the collection of facts through this bureau, there is one evil of such pressing importance that this House can not delay its preventive action. I allude to the importation of aliens under contract to perform labor in the United States. That large numbers of degraded and unskilled workmen have been imported here is a fact thoroughly established by the testimony taken before the House and Senate committee as well as by other evidence. The United States consul at Buda-Pesth, Hungary, Mr. Henry Sterne, in an official letter to the State Department in 1882, says:

I have information that agents are managing the business a good deal in the manner of the cooly trade, and that these immigrants are shipped to the United States about like so many cattle.

The gentleman in charge of this bill [Mr. FORAN] has just informed us that the Hungarian consul at New York, Count Esterhazy, has called upon this Congress to pass a law "to put a stop to such immigration" for the reason that they are "owned by capitalists."

Mr. P. J. McGuire, general secretary of the Brotherhood of Carpenters and Joiners, testified before the Senate Committee on Labor, in 1883, as follows:

Within the last few years it has come to pass that a large body of the cheaper class of foreign laborers, people unused to our habits of living in this country, are brought over here under contracts made in their own countries through the influence of United States consuls, with the avowed object of aiding the iron and coal corporations to reduce the wages of their employés. * * * This importation of labor to this country was noticeable in connection with the strike in the coke region around Steubenville, Ohio, where a large number of those Hungarians who had lived in the interior provinces of Hungary and had been subjected for years to the most brutal conditions were brought over here; and you can judge how low they have become when it is a fact which is quite generally known by all whom I met about Steubenville that while they were working in the service of the coke company there they took the dead carcass of a mule, sliced it up, and dealt it out as rations.

The systematic efforts to import alien labor are detailed in the able report of the committee, from which I read:

Mr. John Swinton, of New York city, in a recent issue of his paper, states that in the lower quarters of New York city there are quite a number of firms engaged in trafficking in human flesh. They are, as a rule, engaged in the "banking business," but their ventures in the slave traffic are quite extensive. Going into one of these establishments for the ostensible purpose of securing Italian laborers for an iron company, the agent stated, in answer to an inquiry, that during the time they had been in business 14,000 Italians had been brought to

this country under contract, 6,000 of whom had returned to Italy. It was further stated that they had agents at Naples, that the American companies paid the passage of the men from Italy, and their fare from New York to destination, which amount the imported Italian agrees to pay back with 6 per cent. interest. The men are shipped from New York to destination by the car-load, cars being chartered for that purpose. The men receive from the American companies from $1 to $1.25 per day. Mr. Swinton also states that the Hudson River Iron and Ore Company, in Linlithgo, Columbia County, New York, had in June, 1883, a large number of Hungarian laborers employed at $1 per day. They were paid monthly, fifteen days being invariably retained by the company. The men were huddled together in shanties, and live mainly upon rye bread and potatoes. They had been brought there under contract to fill the places of American workingmen, to glut the market and thus depress wages.

The Pittsburgh Commercial-Gazette, in its issue of December 11, 1883, publishes a "special" from Erie, Pa., to the effect that H. W. Heichhold, son of the United States inspector of customs of that name, had that day (December 10) returned from Lake Superior and reported a distressing condition of affairs at Jack Fish Bay and other points on the northern shores of Lake Superior. He stated that at these points 3,000 Italian laborers were left in a terrible state of destitution. They were brought from Italy by agents with the understanding that they were to have employment on the Canada Pacific Railway. As they perhaps reached there late in the season, when work had partially suspended, their agents deserted them in many instances and left them without money, food, or shelter. Some of them made their way to the United States or southern shores as stowaways. They complained bitterly of the treatment to which they were subjected by the agents, who held out great inducements to get them here and then sold their labor at so low a rate that it was impossible for them to procure more than the actual necessaries of life while they worked, after which they were turned adrift. Thousands of them were on the northern shores, cut off from civilization, in the middle of winter, many of whom no doubt have ere this died of exposure and starvation. Those who reached our shores are in all probability, for the present at least, a charge upon the communities where they found shelter.

In view of these facts it is not surprising that an indignant protest against this system has come to this Congress from all parts of our Union. Nor will this surprise be lessened when the character and habits of these imported white slaves are known.

DEGRADING HABITS OF THIS CLASS OF IMMIGRANTS.

Abominable as are the habits of the mass of Chinese immigrants, they are not more so than the ignorant, helpless, and brutish creatures whom greed and avarice have brought to our shores. Some of the evidence upon this point will not bear public recital. The idea of home, so dear to our own native and adopted workingmen, seems to them unknown and unappreciated. The respect and love which the humblest laborer in our land feels and exhibits toward the wife of his bosom and the children of his own flesh and blood, are trampled under the feet of these semi-barbarians. The coarsest food satisfies their appetite; the cheapest clothing half conceals their nakedness; the rudest hut or hovel suffices for their shelter. That this picture is only half drawn will be seen from the testimony from which I will briefly read:

Mr. Barkley, of Pennsylvania, testified before the Committee on Labor in regard to the Hungarians as follows:

The class imported by the coke manufacturers are the lowest beings that have ever been in the State of Pennsylvania, subsisting upon what an American laborer could not eat—such as mules, hogs, &c., which have been killed or died with cholera and other diseases. Not one has ever been known to become an American citizen, but all return to Hungary within a limited time (about four years) with what money they can save by living in this miserable condition of filth and squalor. Women and children work, too, drawing coke and forking coke into cars, commencing work about 1 or 2 o'clock a. m. and returning to their shanties as late as 7 p. m., working through all kinds of weather from two to five days per week. They seldom sleep in beds, but lie on the floor, with a board or a stick of wood under their heads, as large a number probably as forty in one house intended for a miner with an average family, one female serving about ten men in all relations between male and female, housewife, and laborer in the coke-yards. They are not known to purchase any of the luxuries which tend to elevate and enlighten the people, living in filth and wretchedness, but hoard up their small earnings, which they promptly forward to Hungary; thereby draining our district of the circulating medium. Being low in the scale of intelligence, they are the willing slaves of the coke manufacturers, willing to submit to almost any conditions.

P. H. McLogan, representative of Chicago Trade Assembly, then in session in New York city, August 24, 1883, said:

We think, also, that the Congress of the United States ought to pass a law prohibiting the importation of foreign laborers under contract. We know that, notably, men working the mines in the upper lake region frequently make contracts in Europe, in Sweden, and Denmark, and import a number of laborers from there. It may be said to be, in a modified form, the Chinese cooly system over again. It is the same system in a modified and less objectionable form. Those men are imported from Europe, and they work from one to two years under contracts made in Europe. That system is a source of great dissatisfaction to a great many American workingmen, for while a great many of us believe that American workingmen ought to have "protection" so as to get better wages, still we can not conceive how we can be really protected when the same manufacturer who advocates the "protection" of American labor can, in case of a lockout, go over to Germany, or some other part of Europe, and import as many mechanics or laborers as he pleases to compete with our American mechanics here at home. That was done notably in the case of the glass-blowers in New Jersey. We consider that any "protection" now given to American mechanics is of no avail so long as capital can import this cheap European labor in that way.

Ex-Mayor Powderly, of Scranton, the general master workman of the Knights of Labor, has just returned from a trip to the Connellsville coke region of Pennsylvania, and the scenes of want and degradation which he witnessed there among the imported Hungarian laborers are a disgrace to humanity. Women and children were at work at and around the glowing furnaces performing the hardest and most menial services. In a published letter Mr. Powderly says:

I had often heard of the employment of women at the coke ovens, but never had an opportunity of seeing it before. At 6 o'clock in the morning I went to the coke works and there I saw that the stories I had heard about this matter had not been exaggerated. At one of the ovens I saw a woman, half naked, drawing the hot coke from the chamber. She had no covering on her head and very little on her person. Her appearance was that of one whose spirit had been broken by hardship and hard work. Her attire consisted of a coarse chemise and a pair of cowhide boots. In a freight-car close by stood another woman forking the coke as it came to the car. Forking is the term used to indicate the disposition of the coke when it is thrown into the car. This woman stood in the doorway and was dressed in a coarse, loose-fitting outer garment and an apron. Her person from the waist up was exposed. When she stooped over to handle the coke she caught her hair between her teeth in order to keep it out of her way. Her feet were incased in a pair of heavy shoes, her legs were exposed from the knees down. Her babe, which she brought to the works with her, lay in front of the car with scarcely any covering except the shadow of a wheelbarrow which was turned up in order to protect the child from the rays of the sun. Many more such scenes as this met my view, some of them even worse than the ones I have described. These will, however, suffice to give your readers an idea of what Hungarian labor really means.

Before the Hungarian was imported the task for an ordinary man was to draw five ovens, but the Hungarian takes the contract for six ovens for less money than the American formerly received for five. He compels his wife or grown-up daughter to accompany him to the ovens in the morning and assist in the work until about noon; after that she may go home.

While the owner of the works does not employ the women, he is responsible for the crime of permitting them to work there, and should be held up to public execration and scorn.

These imported men show no disposition to become citizens of this country, but, on the contrary, seek to obtain a certain sum of money, which they consider a competence, and with it return to Italy or Hungary. I have seen eight of these people and one woman living in a small house, without beds or furniture, sleeping on the floor, and have been informed by reliable authority that these nine persons' expenses for one month was only $27. I have seen them in the Frostburg region of Maryland, where they had been brought by agents, who engaged them at Castle Garden, living in a wooden building, sleeping on bunks, this building being fenced in to prevent them being communicated with by the people whose places they had taken. The diet of these men was water and mush, with a small quantity of meat on Sunday. These men are brought into competition with skilled as well as unskilled labor, and it is fast becoming as bad as the competition of the Chinese in the West.

Such is the testimony of Mr. Powderly, who represents half a million workingmen in America.

Mr. William F. Barclay's evidence before the committee is equally strong:

We have a great many of these so-called Hungarians. They are not Hungarians, but Slavonians. They are not brought to our region on a written contract. There is an agency in Pittsburgh and in New York for the employment of these people, and to send them where they are called for. We are against the importation of these people because their influence is degrading. Firms employ these people in preference to Americans or other emigrants. They are easily imposed upon, not 5 per cent. of them being able to read. They perform this soft-coal mining very well, as it requires little skill. They have usually about one woman to every ten men. Their habits are disgusting in the extreme. I saw and counted one day thirty-five women and children employed forking coke and working about the ovens; the children poorly clad, of every age ranging from 5 years upward. They do not work on Sunday. To illustrate how they live: A yard boss who went to get men to work got thirty-seven men out of a house containing four small rooms. They had no beds, but laid on the floor, heads and tails, I suppose.

I never knew one of these men to stay in the country. They spend comparatively nothing, saving their money to return home. Even when sick they go to the poor-house, until at last the authorities refused to longer entertain them while they had money. They will eat anything. They hang their meat out in the sun that it may become soft and tainted. The business men of the region are opposed to them. They get the same wages as the Americans, except when they work by the day; then they are paid 33 per cent. less, which is all they are worth. This importation has reduced the price of mining, and makes it impossible for the men to do other than submit to whatever the operators demand or require of them, regardless of its justice.

These statements present a picture of woe and penury and degradation at which every friend of humanity will shudder. It is hard to believe that such things can be true in this land blessed with free institutions and boundless resources of wealth. Shall we consent to such a condition of affairs? Shall we suffer the ignorant and outcast of the world to be brought here under contracts which make them virtually slaves? Shall the self-respect of our laboring men and the modesty of their wives and daughters be laid a willing sacrifice upon the altar of avarice? These are questions which vitally concern the peace, happiness, and stability both of society and of government.

FREE TRADE IN LABOR.

We have heard much on this floor and elsewhere about "protection" and "free trade." That there are members before me who are warm friends of "protection" I know to be a fact, for "they themselves have said it." They want high protective duties upon all the products, whether food, medicine, or clothing, that come from abroad. If there is any member on either side of this House who advocates "free trade" I do not know it. There are many here, and I agree with them, who think that if the present tariff was modified so as to put the heaviest duties upon silks, diamonds, and other luxuries, and reduce them on food, clothing, and the necessaries of life, the wages of the workingman would buy more and his home would be happier. There are some of us also who think that a change in the tariff would give a larger and more remunerative market to our manufacturers, thus enabling them to keep their founderies and factories open all the time, and giving wages which would not only be high, but continuous and permanent. I do not consider that our belief of these and kindred propositions make us "free-traders."

But, Mr. Speaker, there are "free-traders" in this body and in the country, and these "free-traders" are all "protectionists." I do not say that all protectionists are free-traders, but I do say that all free-traders—in the sense in which I now use the term—are protectionists. Who, then, are these free-traders? They are the men who advocate and countenance by their votes and secure by their agents the importation of cheap and degraded laborers to compete with our home people. They

are not all but many of the capitalists and corporations of the country. They are the men who traffic in human flesh, who buy their ignorant fellow-men for a mess of pottage, whose cry, like the daughter of the horse-leech, is ever for "more." They are the honorable but misguided gentlemen who in this Congress and in previous Congresses have voted in favor of Chinese immigration—who voted that a low, immoral, squalid race should supplant by their labor and dishonor by their example the honest, worthy, and industrious workmen already in our midst. These are the only avowed "free-traders" in American politics. "Protection in the products of labor" but "free-trade in labor itself" seems to be their motto. Against this I enter my solemn protest. Where is the consistency of such a position? If the capitalist must have protection for what he makes; if his goods and property must be kept sacredly guarded against all competition with the markets of the world, why should not his employé ask and receive the same protection? The brain and muscle of the molder or weaver is his only property. Why not protect it as you do the property of its employer? Why let the brain and muscle of China or Hungary be brought into ruinous competition with it? Why shut the gates against all foreign competition in the products of labor, thus increasing the price of the necessaries of life, and at the same time throw them wide open to all the imported labor of the world? This is the very perfection of injustice. You smite the workingman with a two-edged sword. You refuse to let him buy where he can buy the cheapest, and you let in this degraded labor, which lessens his wages with which he can buy. Such a policy is at once grotesquely absurd and cruelly unjust. To correct that injustice this bill is intended. It puts an end to contract or servile imported labor.

TERMS OF THE BILL.

The first section embodies the substance of the bill:

That from and after the passage of this act it shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever to prepay the transportation or in any way assist or encourage the importation or migration of any alien or aliens, any foreigner or foreigners, into the United States, its Territories, or the District of Columbia, under contract or agreement, paid or special, expressed or implied, made previous to the importation or migration of such alien or aliens, foreigner or foreigners, to perform labor or service of any kind in the United States, its Territories, or the District of Columbia.

The second section declares that all contracts with "any foreigner or foreigners, alien or aliens, to perform labor or service in the United States previous to the migration or importation of such persons into the United States shall be utterly void and of no effect."

The third section imposes a penalty of $1,000 for "every violation of any of the provisions of sections 1 and 2 of this act."

The remaining sections are in the same direction.

A HEARTY WELCOME TO BONA FIDE IMMIGRANTS.

It will thus be seen that there is nothing in this bill which forbids or discourages the coming to this country of voluntary immigrants. Nor does it prohibit the bringing over of the family or relatives of foreigners now in our country. At the end of section 5 is a proviso:

That nothing in this act shall be construed as prohibiting any individual from assisting any member of his family or any relative to migrate from any foreign country to the United States.

Across the waters we extend the hand of welcome to all who will identify themselves with our institutions, respect our laws, and advance our common interests. Most cordially has this generous invitation been accepted. In every land the hearts of its oppressed and liberty-loving people have turned to free America as the prisoned plant turns to the sun. The official statistics show that since 1820—that is to say, for the past sixty years—the voluntary immigration to this country has reached the grand total of 10,808,189 people, nearly four times as great as our whole population in 1790. We welcome all who desire or intend to make this their home or who expect to become permanent citizens of our Government. The German, the Irish, the French, and other immigrants have quickly and successfully adapted themselves to our institutions. Descended myself from such ancestors, I should be the last one to complain of their coming or detract from their virtues. Their conduct and history is their best praise. Prompt to defend the honor and to promote the welfare of their adopted land, yielding ready and cheerful obedience to its laws and customs, they have illustrated in their lives and indicated by their conduct the wise policy of immigration. As kindred drops of water they have mingled and been lost in the great stream of American life. All such immigrants are welcome, and they know it. It is right to invite this class of immigrants, and it is also right to shut our ports against these imported laborers, who are willing to live in filthy hovels, half fed, and ignorant as the beasts of the field. Through the first comes to us fresh, healthy blood, which helps to build up and strengthen the body of the Republic; which creates a brave, patriotic, self-reliant, assimilative citizenship. Through the second comes only stagnant, diseased blood, which weakens the sinews of the country, and which, if not removed, will bring decay and death.

THIS LEGISLATON NOT NEW—THE ANTI-CHINESE LAWS.

But it has been said here that this legislation is a "new departure." I see, sir, no ground for such a charge. We all know that years ago what is known as the "cooly" law was passed, which is similar in its principle to this. We all remember the more recent anti-Chinese legislation. As chairman of the subcommittee I had occasion six years ago to examine this question. We were satisfied both as to the policy and rightfulness of such legislation. In behalf of the Committee on Education and Labor I presented to Congress the first anti-Chinese bill. It was vetoed by President Hayes, but the efforts we made forced a new treaty with China. Under that treaty our committee subsequently in the Forty-seventh Congress introduced another bill which was vetoed by President Arthur. Another bill was then offered more in conformity with the views of the Executive, but much less satisfactory to the people of the Pacific Slope. That bill became a law, and this Congress to make it effective has added certain amendments. This whole subject is, therefore, familiar to us. The Chinese, like these imported Hungarians, were degraded, groveling white slaves, without self-respect, wifeless, childless, and unfit for American citizenship. We, therefore, excluded them from the country; and in so doing I contend we violated none of the traditions or principles of American nationality. It is neither possible nor desirable for two races as distinct as the Caucasian and Mongolian to live under the same government without assimilation. The degradation or slavery of one or the other would be the inevitable result. Homogeneity of ideas and of physicial and social habits are essential to national harmony and progress. From an industrial standpoint also the Chinese are equally objectionable. Our laboring people can not and ought not to be subjected to a competition which involves the surrender of the sacred and elevating influences of home and the sacrifice of the ordinary appliances of personal civilization. No self-governing country can afford to diminish or destroy the dignity, the welfare, and independence of its citizens.

The action of the present Congress, therefore, in amending and strengthening the anti-Chinese law afforded a precedent for the passage of the bill against the importation of alien laborers, and at the same time is another evidence of its desire to do full justice to the workingmen of our country.

CONTRACT CONVICT LABOR.

Another bill, in the same direction as the two just mentioned, is the one (H. R. 995) abolishing what is known as the contract convict labor system, so far as the prisoners of the United States are concerned. In most of the States the system of contracting out the labor of the criminals exists. The report of the committee and the evidence recently published by the Senate Committee on Education and Labor show the necessity of such legislation:

The evils of the contract system are many, but your committee deem it necessary to only mention the following:

(1) The contract system is wholly adverse to reform, and therefore should be abrogated. The prisoners are treated as if they were so many dumb beasts, being driven to their daily tasks by men whose aim is to get a certain amount of work out of them each day.

Dr. Wines says:

"It places for the entire working day all the prisoners contracted for, to a great extent, under the control of men with no official responsibility; men who see in the convict only so much machinery for making money; men whose only, or at any rate, whose chief recommendation to the positions they hold in the prison is that they are the highest bidders for the human beings hired by them. It introduces into the prisons agents of the contractors, who, for the most part, have not only no interest in aiding reform of the convicts, but are too ready to oppose it, by offering mischievous indulgences to the convicts as an inducement to further industrial efforts."

Dr. Wines says further, to show that no reform is possible under this system:

"In former times, especially conspicuous in New York was the fact of the establishment in the prisons of a power behind the throne greater than the throne; a power well-nigh omnipotent within its sphere; a power that coerces, bribes, and threatens in pursuit of its selfish ends; a power that makes and unmakes officers, imposes and remits punishment through agents whom it has been able to bend to its will, and even stoops to mean devices to get the poor prisoner who has incurred its wrath into straits and difficulties, that its revenge may be gratified by the sight of his punishment."

(2) The contract system works great injury to honest labor in many branches of industry. Investigations by committees of State Legislatures has shown this fact repeatedly. The special committee of the Sixty-third General Assembly of Ohio on prison labor in their report say:

"The testimony shows conclusively that the contract system carried on in our penal institutions is directly responsible for a large percentage of the reductions which have taken place in the wages of thousands of mechanics during the past four years. Nearly every manufacturer who testified before your committee attributed a large percentage of the reduction in wages to the system which enabled manufacturers who have prison contracts, and who employ large forces of convicts at cheap rates, to go into the market and undersell them. There is little or no room for doubt as to the evil effect of this system upon the interests of free labor. It not only tends to pauperize honest labor, but it is, in a great measure, responsible for the overcrowded condition of many of our penal institutions."

The result of the investigations by the commissioner of the bureau of labor statistics of the State of New York is:

"The contract system of prison labor is directly responsible, to a great extent, for the reduction of wages and loss of employment suffered by mechanics engaged in the same branches of industry which are carried on under the contract system in the prisons."

No argument, however, is needed upon a subject so familiar. This House has by unanimous consent set apart a day for the consideration of this bill, and also for the bill relative to the eight-hour law. I hope when the day is reached both of these measure will be promptly passed.

THE EIGHT-HOUR LAW.

Four years ago this House by a two-thirds vote declared the meaning of this eight-hour law and demanded its enforcement. I well remember the great interest which the workingmen of the whole country manifested in this law. A committee of the most intelligent and influential representatives of the labor unions came to this city in behalf of its execution. I may be pardoned for reading a letter which those

gentlemen voluntarily addressed to me as a member of the committee then in charge of the matter:

WASHINGTON, D. C., *June* 8, 1880.

DEAR SIR: On behalf of three-quarters of a million of organized workingmen of the United States, whose organizations we have the honor to represent, we cordially thank you for your efforts of yesterday in aid of the resolution for the enforcement of the national eight-hour law.

Hoping for better success on the next trial over open enemies and cowardly "dodgers" and filibusters, we are, sir,

Very truly, yours, &c.,

JOHN G. MILLS,
Secretary Eight-Hour Delegation.
R. F. TREVELLICK,
Chairman, Detroit, Mich.
DYER D. LUM.
Northampton, Mass.
C. H. LITCHMAN,
Marblehead, Mass.
A. R. PARSONS,
Chicago, Ill.
S. C. HUNT,
Boston, Mass.

Hon. ALBERT S. WILLIS, M. C.,
House of Representatives, Washington, D. C.

Then, as now, this question was near to the workingmen.

Then, as now, the failure to execute it was inexcusable. What are the facts? On the 25th June, 1868, Congress passed a law which is embodied in section 3738 of the Revised Statutes and is in these words:

Eight hours shall constitute a day's work for all laborers, workmen, and mechanics now employed, or who may be hereafter employed, by or on behalf of the Government of the United States.

If this is the law, and if it means what it says, what reason can Congress give for refusing to declare that meaning to the world? If any doubt as to its meaning could exist it would be removed when we recall the circumstances which preceded its introduction and the debate at the time of its passage.

Petitions had been sent to Congress from all parts of the country, petitions not only from the arsenals, navy-yards, and other places under the charge of the Government, but from the laboring people generally. One large petition, I see from the record of that time, came from my own city, Louisville, in which there never was an arsenal or other Government work where this law would operate.

These petitioners claimed that the experience of mankind showed that in the long run men could accomplish as much work by working eight hours steadily as could be done by attempting to work for ten; that man's physical capacity for manual labor was limited, and that it was not wise to attempt to extend it beyond its reasonable capacity; that such a reduction of the hours of labor was proper in view of the increased work done by machinery, and that as full results would be secured to the Government within that time as within ten or fourteen hours.

Passing to still higher considerations, these laboring men contended that as our Republic was based upon the intelligence of the people, it was the duty of every man who was a voter to fit himself for the proper discharge of his duties as such, and for this purpose he should have a portion of each day to devote to his education and improvement. Contending, therefore, that the health of the laborer and the general interests of society would be promoted by this reform, these petitioners came to Congress asking that the Federal Government should put their theories to a test, hoping and knowing that if it proved successful in the case of the Government the example would be followed in all private establishments. It was in response to such appeals that this eight-hour law was passed. The debate at the time it was passed showed what its meaning and purpose was. Its terms are plain, and the experiment it proposed is worth the cost. The bill I have referred to proposes to pay these men according to this law. Can we afford to refuse this? Will a refusal secure that respect for and obedience to the law upon which more than anything else the harmony and perpetuity of our free institutions depend? Sir, if there were no questions of private right involved, if there were no merit whatever in the original proposition, I should feel it my duty to demand the enforcement of this law as an example to be placed before the country. If we in this place ignore, nullify the solemn statutes of the land, how can we look elsewhere for anything but riot, anarchy, and insubordination?

LANDS FOR THE LANDLESS.

Another subject which has largely occupied the time of the present Congress, and which is of great interest to every wage-laborer, is that of the public lands. It is well known that under an unwise and indefensible policy the public lands which ought to be sacredly set apart for the use and benefit of the people have been within the past twenty-five years given to railroad corporations. Two hundred millions of acres have been thus granted away—an immense empire in itself. The Atlantic and Pacific road in 1866 received 49,244,803 acres. The Northern Pacific and the Texas Pacific, the Iron Mountain, the California and Oregon, and numerous other corporations were given many millions more. Not content with this, other monopolists began a system of buying and unlawful fencing up of public lands, thus aggregating thousands and hundreds of thousands of acres in one great ranche. The Commissioner of the Land Office presents the facts. One single corporation, the Arkansas Cattle Company, has fenced in 921,600 acres. Many foreign companies have fenced up or bought up millions of acres which were intended for the general public. In Texas, Nebraska, and throughout the West and Southwest these have grown in size and enormity.

Congress has dealt a deadly blow at this triple-headed monster of land monopoly. This House has passed laws forfeiting over 70,000,000 of acres which these railroads claimed and restoring them to the people. It has also repealed the pre-emption laws, through the fraudulent abuse of which these immense bodies of land have been aggregated, and has restored these lands to *bona fide* homestead settlers. This House has also by a law put an end to this unlawful fencing of the public domain. These, Mr. Speaker, are measures which vitally affect the welfare of the great body of our people. We want no great land monopolies; we want no landed aristocracy; our population is rapidly and enormously increasing. Except for some legislation of this kind these great land and cattle companies and the railroads will have absorbed all the available lands of the country. This legislation alone will entitle the present House of Representatives to live in the grateful remembrance of the American people.

FEDERAL AID TO EDUCATION.

But, sir, in making this hasty enumeration of acts of legislation in the present Congress favorable to the laboring man and the great masses of our people I come lastly to the most important of all. I refer to the measures looking to the education of our people.

As far back as last February the Committee on Education reported a bill which is now on our Calendar extending aid for ten years to the States for educational purposes. The Senate committee within a few days thereafter reported a similar bill and for a larger amount—seventy-seven millions. The Senate bill is on the Speaker's table, and this House will bear me witness that as chairman of the subcommittee in charge of this legislation I have faithfully endeavored to secure action upon it. I hope before we adjourn that this bill will become a law. If, however, the pressure of the appropriation bills prevent action during the present session, I shall immediately upon the opening of the next session press this bill upon the attention of this House.

I need not here urge the importance of such a law. Intelligence is the prop, the cementing bond, the sheet-anchor, the very life-blood of our free institutions. We need no standing armies in a republic. We need only that the people should know their rights and advantages, and such knowledge will be always a sure rock of defense. No free, intelligent, and self-governing people can ever be overcome either by open foes or internal dissensions.

CONCLUSION.

I have thus, Mr. Speaker, called attention to a few, and only a few, of the acts of legislation which this House has brought forward, and most of which have already been favorably voted upon. Good laws make good citizens. Let Congress recognize the rights of all our citizens; let the toiler by the wayside, the delver in the mine, the workman at the forge, the plow, the loom, and the anvil feel that these laws are made for him as well as for the more powerful members of society; let it be believed that Congress and the Federal Government are governed by that old and approved democratic maxim, "equal rights to all, exclusive privileges for none," and you will have laid in the hearts and interests of all our people the foundations of a republic which will stand and flourish

Till the wave in the bay
Where the Mayflower lay
Shall foam and fall no more.

Chinese Immigration.

SPEECH
OF
HON. JAMES H. BUDD,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 3, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 1798) to amend an act entitled "An act to execute certain treaty stipulations relating to Chinese," approved May 6, 1882—

Mr. BUDD said:

Mr. CHAIRMAN: When fuller information concerning the Chinese and the effect of their competition upon our people is possessed east of the Mississippi River there will be no opposition to further needed anti-Chinese legislation.

The learned gentleman from Massachusetts [Mr. RICE] states that this bill "adds no single barrier to the coming of Chinese into our country." If this be so, why did he so violently oppose the measure? Such opposition certainly proves that, to his mind, the bill is very restrictive. The second point made by him is that as there have been fewer arrivals since the act of 1882 took effect than before that time, the pres-

ent law is perfect and a new one unnecessary. This position has been fully answered by my colleagues Messrs. SUMNER and GLASCOCK. To what they have said I can add but little. That there have been fewer arrivals since the act of 1882 than before is true. From August, 1882, to November, 1883, only 2,652 Chinese landed at San Francisco, whereas 14,086 departed therefrom. Of the latter, 12,181 had return certificates. The loss by departure was but 1,905. There are many reasons for this condition of affairs. I will state a few:

First. The act of 1882 and the agitation for its passage stimulated Chinese immigration during 1881–'82, during these years 56,381 Chinese entering the United States, nearly double the influx of any other two years. Every Chinaman desiring to come, who could secure passage, found his way into the country. Thousands were prevented from coming only through lack of transportation facilities. Ships and steamers violated the navigation laws and were laded far beyond their regulated capacity. Every available vessel was pressed into service. Naturally a calm followed this storm. Stimulations are almost invariably followed by periods of relaxation.

Compare the stimulated increase of 1873, 1874, 1875, and 1876 with the relaxation of 1878, 1879, and 1880. The Chinese immigration in 1873 was 18,154; in 1874 it was 16,651; in 1875 it was 19,039; in 1876 it was 16,679. Then began the relaxation. In 1877 the immigration fell to 10,379; in 1878, to 8,418; in 1879, it was 9,189, and in 1880 it had ebbed to 7,011.

Second. There was a rush to enter before the act of 1882 became a law, as the operation and construction of it could not then be determined. The desire to come was not lessened, the fear of law deterred. This law must be tested before it was safe for the Chinese to again pour into our country. Chinese came over in violation of the intention of the law; able attorneys were employed, and the act was put to the crucial test of judicial construction. The weak points of the act were judicially determined, and the modes shown by which it could be evaded. The judges could not agree as to its proper construction. In the East the law was given one effect, in the West another.

Now that the Chinese know how to evade the operations of the act of 1882 they will do so, unless an act be passed remedying the defect of that law and removing from the domain of judicial determination its disputable points.

But the number given as coming to the United States is not correct. It does not approximate the truth. I am informed by George C. Israel, a leading attorney of Olympia, Wash., that the Chinese have devised many effective modes of crossing the border in direct violation of law; that it is worth from $50 to $100 for each Chinaman brought in. Mr. Israel relates many of these methods, but I have not time to specify them. Suffice it that hundreds come in of whom no record is kept. Mr. Israel is corroborated by the reports of the United States officers of Washington Territory.

SUMNER'S AMENDMENT.

It was to remedy these evils, which my learned colleague Mr. SUMNER foretold months before any official report was made thereof, that he proposed the amendment giving peace officers of the States and Territories the powers of United States marshals and deputy marshals for the purpose of enforcing the provisions of the act. This is one of the most important amendments to the bill, and one without which nearly every other provision might easily be violated. This amendment alone shows the error of Governor Rice's assertion.

But, I might ask, would it be any argument against amending a law shown by judicial construction to be worthless to assert that after its passage and prior to its judicial construction less crime had been committed?

The proper questions to answer are: What can be done under the present law? Does it carry out the intent of its framers? Has it defects? How has it been construed? If the law does not carry out the intent of its framers, or if it has defects, or if it has been rendered useless by judicial distortion, a bill carrying out these intentions, remedying these defects, and preventing these distortions should be passed.

That is the present case. That is the object of the present amendatory bill. I do not claim that the bill is perfect. I consider it not full enough in some particulars and unhappy in the expression of a few others. The bill is the best that could be expected under the circumstances. It is not the work of any one or two men. It is the work of the Pacific coast delegation in Congress. The people of the coast are a unit in their demand for the passage of some bill that will cure the defects of existing law. This bill covers most of them. To remove the question from the domain of politics and give the measure adopted an indorsement that would command speedy action, the Delegates, Representatives, and Senators from the coast met in joint committee. As amendments were proposed they were discussed, and adopted or rejected. When the ground had been fully covered all the amendments adopted were copied, and the bill thus framed placed in the hands of one of the members [Mr. HENLEY] to introduce for all. The individual wish was subordinated to the majority judgment. The bill is a good one and will prove effective.

NO TREATY VIOLATION.

The claim that it violates the treaty because it regulates the manner in which merchants and other privileged persons may enter the country and the evidence of their status is absurd.

As well could it be claimed that registration laws violated the Constitution and prohibited citizens from voting because they prescribed the manner thereof and the proper evidence of the right.

Regulations are not prohibition. And proper regulations and certificates are beneficial to the true merchant, because they save him from expense and annoyance. They are only objected to by such as have no right to enter the United States, and under this act will be prevented from securing the evidence of such right.

But should the act have violated treaties, what then? Well, if just and needed it should pass, for we owe more to our own people than to the other nations of the earth. Treaties must give way to matters of right protecting citizens of our own country.

NUMBER OF CHINESE IN THE UNITED STATES.

The number of Chinese in the United States has been variously estimated. The census of 1880 places it at 105,465. This is incorrect; it is too small. Any one familiar with the Chinese understands the impossibility of obtaining exact statistics concerning them.

I will prove that the number is larger than given in the census.

In 1869, H. C. Bennett, secretary of the San Francisco Chinese Protective Society, with the aid of the Chinese companies, made a careful estimate of the number of Chinese in the United States. This, coming from such sources, approximates accuracy. The figure was 90,000. Yet the census of 1870, only one year later, gave the number of Chinese as being 63,199. The census was incorrect.

In 1876 Mr. Alfred Wheeler appeared on behalf of the Chinese before a joint committee of Congress. From the custom-house records of San Francisco he proved, on behalf of the Chinese, be it remembered, that there were then only 93,963 Chinese in the State of California, and only 113,000 in the United States who had come through the port of San Francisco. He did not include one Chinese person who had come into the United States through Oregon, Washington Territory, or any port other than San Francisco. (See page 1196 of the testimony before the joint committee on Chinese emigration of 1876.)

Assuming the figures of either Bennett or Wheeler as correct—and the presumption is that neither are too high, for they were calculated to favor the Chinese companies, which were even then endeavoring to prove as small a number of Chinese in the country as possible—now, by adding the number of arrivals since 1869 or 1876, as the case may be, we have, after deducting for departures and deaths, a far greater number than given in the census.

Take Bennett's figures: Chinese in United States in 1869, 90,000; arrivals from 1869 to 1882, 205,431; a total of 295,431. Of these less than 100,000 have either died or departed since 1869. This would leave 195,000 yet here.

Take Wheeler's figures: In 1876 there were here 113,000. There have entered the United States since then 93,955, a majority of whom remain. This would give us over 150,000 to-day in the United States. In this estimate are not included those Chinese who entered prior to 1876 through any port other than San Francisco. It will therefore be safe to say that from 175,000 to 200,000 Chinese are now in the United States. In confirmation of this estimate I desire to call attention to the statements of gentlemen who have given the subject careful study.

In 1876 Frank M. Pixley calculated from 150,000 to 175,000 Chinese on the Pacific coast. In 1879 Hon. J. K. Luttrell and Hon. Frank Page stated on the floor of the House that there were in California 150,000 Chinese. Senator Sargent spoke to the same effect.

The joint committee which carefully examined into this matter reported, February 27, 1877, that Chinese in California equaled the number of voters therein (150,000 and over), and Mr. WILLIS, on February 25, 1878, reported from the Committee on Labor and Education, "that the lowest estimate of the Chinese in the Pacific States is 150,000."

I feel certain the number in the United States is not less than 190,000, of which at least three-fourths are on the Pacific Slope.

WHY CHINESE LABORERS SHOULD BE EXCLUDED.

It is asked, why is there an attempt to exclude Chinese and not other laboring classes? No person who has fully studied the subject will ask this question. The situation evidently is not understood. Let facts answer.

POPULATION OF CHINA.

China contains one-third the population of the world. Great Britain, France, and Germany united contain less than one-third the population of China. In 1812, when the United States had a population of less than 8,000,000 of people, a census was taken in China showing 360,279,897 inhabitants. According to the Almanach de Gotha for 1875, China proper had 404,906,514 inhabitants, and the empire contained a population of 425,000,000. The customs returns of 1882 lower this considerably.

The struggle for existence of the working people of China is bitter. Fully one-sixth of the population could be spared to the benefit of the remainder. Over 100,000,000 people, nearly double the population of the United States, could leave China to the benefit of that country.

The introduction of labor-saving machinery into China is opposed by the people, as it would compel an exodus or cause a famine. When it is introduced to any considerable extent millions must die or migrate.

The Chinese cloud that now hovers over the Pacific slope may some day burst on the civilized world.

When Beaconsfield proposed to bring the native soldiers of India into European warfare, the protest that prevented this step was not the result of idle fears.

When arms of precision and machinery of war are possessed alike by all nations and military science generally understood, numbers and valor will decide warfare and determine the dominant powers. This is not idle talk. I call attention to the known fearlessness of the Chinese, to their utter disregard of death, to the tenacity with which they fight, to the present absence of proper military training and equipments, and to their efforts to remedy this defect.

For evidence of their great military possibilities I direct attention to the report of General Upton, of the United States Army, who in 1876, under the direction of this Government, made an inspection of the armies of the world. I also call attention to the performances of the "Invincible army" under Gordon during the Tai-Ping rebellion. It needed only military genius to utilize the raw material of the Chinese Empire.

But it is the unarmed invasion against which we are now providing.

CHINA AND INDIA.

China and India are certain to have powerful influences upon the welfare and policies of nations. What figure will their climate, position, physical resources, and exhaustless supply of cheap labor cut in the commercial world?

When factories are fully established in these countries will free-trade England change her policy? As factory hands the Chinese are spoken of with praise. There is nothing they can not do. The introduction of them into the factory at North Adams, Mass., and the statement of their employer show how common coolies may speedily become expert workmen. It also shows how they may be used as a bludgeon to beat honest laboring men into reductions of wages.

Climate and physical conditions render necessary more food, more clothing, and more shelter here than in China. If, then, among us and under heavier expenses, their competition is so disastrous, how will it be when in their own country under far less expense they begin a competition in the products of exchange? Already India is forcing down the price of cereals by increasing the supply and producing at a price impossible here.

Her rapid strides in the cotton line are thus soon being felt in England.

What is to prevent these and like countries, in few years to come, from using America and Europe as the vent for their cheap productions? They possess cheap labor and cheap raw material, and these will grow more cheap when capital introduces labor-superseding machinery. But I can not follow the thought further at this time.

CHINESE AT HOME.

The Chinese at home live from hand to mouth. They can and do subsist upon less than any other known semi-civilized people. Education, habit, and ages of privation have bred into them economy, energy, and frugality.

Possessing many defects, the natural outgrowth of their idolatrous religion, overcrowded condition, and system of government, they also have some commendable qualities.

Economy, intelligence, energy, and adaptability to all employments are some of the latter. It must be confessed that these very qualities, added to their manner of living and customs, make the Chinese such formidable and undesirable competitors of American labor. Each Chinese laborer here is a machine, run at a daily cost of a few cents, to the displacement of a citizen on whose earnings depend a family.

LABOR AND WAGES IN CHINA.

I shall in a few words speak of labor in China.

Spear, in his pro-Chinese work, page 497, says:

The wages of labor in China in the larger cities is but a few cents a day.

Nearly everything is made without machinery.

At Foochow, a city of 1,000,000 inhabitants, the wages are low. Says Doolittle:

The wages of the common people are very low. Carpenters and masons obtain from 20 to 30 cents per day, boarding themselves. Hired men and women who do coarse work in the fields or in houses as servants generally receive from four to six dollars per month, and board themselves. If their employers board them they get from one to three dollars per month. Clerks and accountants receive from ten to thirty dollars per annum, with their board. School-teachers often obtain only from thirty to sixty dollars, besides small presents from their pupils, per annum. Literary men who are poor, and who fail of acquiring government employment, are frequently glad to teach school at almost any price. Food, clothing, and rents are cheap, and yet the poor of all classes are enabled to support themselves only by great frugality.

This is true of all the cities, and Rev. Dr. Gibson, who is strongly pro-Chinese in sentiment, confirms it in his evidence before the joint committee of 1876. Back from the coast wages are even lower and the condition of the people worse than at Foochow or Pekin. Tea-pickers get from 6 to 8 cents per day.

Nevins, in his pro-Chinese book, says on page 31:

A boat manned by two persons and of such size that ten Chinamen think they can sleep comfortably in it may be chartered for $1 a day.

Boat and two Chinamen only $1 a day!

General Upton, speaking of Che-foo, says:

The town is a desolate one, streets narrow, gutters filthy and reeking with blue mud, the men dirty, ill-dressed, and squalid.

This is a good description of a model Chinese city.

Again he says of Tien-Tsin:

Tien-Tsin is a city of 400,000 inhabitants, one-half of whom reside outside of the walls. The houses are mostly of mud; the streets are unpaved, narrow, filthy, and redolent of bad odors. To one who has seen the worst streets of New York a comparison there with would convey but a slight idea of Tien-Tsin. Squalid men and women, half-famished dogs gnawing offal from the butcher-shops and the kitchen, hogs wallowing in the gutters and rooting up their malarious contents, cats, wheelbarrows, mules, and donkeys—*voilà* Tien-Tsin.

Again, speaking of the country between Tien-Tsin and Pekin—the latter has 1,300,000 inhabitants—he calls attention to the poverty of the Chinese in these words:

In many respects the country which we traversed resembles the prairies of Illinois, even to its corn fields, but here the poverty is apparent, from the fact that the cornstalks are dug up for fuel. The villages are all composed of mud huts, roof and wall alike, which in floods and heavy rains often wash down and disappear. In going through one of the villages a member of our party sought to change a silver dollar. He was told it was too large a coin to circulate in that town, and retired with his ideas of Chinese wealth essentially modified.

The streets in China are from six to ten feet wide, and are dark and dirty. Of the hotels in this country Williamson, in his admirable work, says that hotels in China have no beds, a raised stone or mud dais serves as such, and under these at night a fire is built for warmth. Travelers carry their own blankets. The only furniture are a bench and table.

The food of the people is principally vegetable. Their energies are constantly strained to keep the wolf from the door. Besides vegetables, fish, dogs, cats, hogs, ducks, and such other animals as cost nothing to raise, in fact such only as raise themselves, are used as food. Black cats and dogs are preferred, and are on the *menu* of the restaurants. So says Williams in his Middle Kingdom. It is also asserted that rats are a common diet, but a careful investigation leads to the conclusion that this is not a diet of preference but of necessity. On this subject of labor and wages in China United States Consul-General Denney, in writing to this Government in 1880, treats fully.

CONSUL-GENERAL DENNY'S ACCOUNT.

Of the higher class of laborers, the silk-weavers and artists, he says:

Each is contented if he and his family earn enough to live upon; and if, after providing for a parent's funeral expenses and contributing toward one of his children's weddings, he has economized sufficiently to assure an honorable funeral of his own remains and those of his wife, he feels as though he had accomplished the object of his existence.

That I may not be charged with buncombe I will give the following extracts from the official report made in 1880:

The grand average of an income under the head of skilled labor is as follows:
For a master, per week, $3; $156 per annum.
For a workman, per week, $1.50; $78 per annum.
For youngsters or females, per week, 50 cents; $26 per annum.
The expense of living will be, respectively:

For a master per annum:

For food, &c	$72
For rent, &c	36
For clothing, &c	12
Total	120

For a workman per annum:

For food, &c	$45
For rent, &c	12
For clothing, &c	8
Total	65

The females and youngsters are considered to absorb all they earn.

The master lives generally at his workshop, where he has, perhaps, two rooms, besides a place to cook in. The household furniture may be estimated at from $20 to $30.

The ordinary workman, if married, will share a small house with a friend and occupy one room and have access to the kitchen. He may live with his parents, in which case his earnings go to the common fund Under such circumstances $10 to $15 will cover the value of his household furniture.

If a bachelor, and away from his family, he will either sleep at his employer's for a consideration, or stay with a friend; in either case his whole inventory consists of a box, with his clothes and his bedding.

AGRICULTURAL LABOR.

Here it is necessary to distinguish between the owner or tenant farmer and the laborer who hires himself out by the day, the week, or the month.

On a Chinese farm every member of the family must work; even the children, when only 6 or 7 years of age, have already some regular work assigned them. Two and one-half acres of good arable land, with a house, the material of which consists mostly of mud and reeds or bamboos, sometimes of stone or brick, with a roof of straw or reeds—seldom of tiles—a bullock, buffalo, or cow, a couple of pigs, a few fowls or ducks, and finally a few primitive agricultural implements, constitute the property of a well-to-do farmer.

Say the family consists of man, wife, and two children of 7 to 10 years of age. They live almost entirely on the productions of their own soil; 200 copper cash, or about 20 cents, a day is about the marketable value of the food consumed by such a family. The ordinary daily fare is rice, or, as in the north, bread made out of wheat-flour and millet, also some salted vegetables and a light decoction of the commonest tea. On festive occasions some pork, fowl, or salted eggs, and a cup or two of samshee (wine) form all the "extras" these frugal people indulge in.

The budget of a farmer's family stands on an average about thus:

Value of two and one-half acres of land	$400 00
A good animal of draught	20 00
Manure	10 00
Irrigation	10 00
Seeds	3 00
Help at harvest time	8 00
Taxes, one-tenth on the gross yield of rice or wheat	11 00
Total expenses	62 00

The two and one-half acres, which the two adults, with the assistance of an

animal of draught and their children, can work, will yield, if the land be of average fertility and under ordinary climatic circumstances, in—

Rice	$120 00
Second crop, beans, cotton, or barley	40 00
Or, say, in all about	160 00

Deduct from this the cost of living of the family, $73, and the total of other expenses as above, $62 = $135, and there will be an income for the year of $25.

There are besides some other small sources of income which are under the control of the women, such as the raising of chickens, pigs, the making of yarn and cloth, &c. These must be set off against other expenses for clothing, &c., not enumerated in the foregoing budget.

When cotton is cultivated the yield of 2½ acres is about as follows: Average yield about 1,600 pounds, at 4 cents = $64; actual outlay for cultivation, $20; mandarin tax, $8; assistance, $3; leaving net profit of $33.

This yield can only be produced upon land adapted to the growth of cotton. The cotton is either sold (in this case it is with the seed in) or so much is retained as may conveniently be spun and woven at home.

A woman manages to spin about one-third pound of yarn (woof) a day, which labor is worth 6 cents. For the manufacture of the warp a process is adopted which necessitates the assistance of two or three persons, and for this the neighbors assist each other, just as the loom for weaving is often the property of several families or of a whole village.

Two classes of cloth are made in the country, namely: 1. A heavy quality, thirty-nine inches wide, in pieces of six and one-quarter yards; 2. A lighter quality, forty-six inches wide, in pieces of nine and one-third yards.

A woman weaves one piece per day; sometimes more.

To convert raw cotton into one piece of cloth involves an average of six working days, and the weight of the piece averages about one and one-third pounds, and its worth about 60 cents.

The farm laborer hires himself out by the day, the month, and, less frequently, by the year. The value of his labor varies according to the season of the year. During harvest time he gets, besides the meals, worth about 10 cents, from 10 to 15 cents per day, or 70 cents to $1.05 a week. If his employment be by the month he gets $1.50 to $2 a month, besides board.

For permanent employment or employment by the year the wages are lower, averaging about $12 per annum, with board and lodging. When working for short terms, lodging is no great consideration with him, for he will always find rough accommodations with a friend or relative. Men of this class defray their house rent with about 50 cash a month. About $2 per annum will keep his wardrobe in a state adequate to his scanty wants.

A man who saves $3 to $4 a year does fairly well, but the majority live from hand to mouth, and their whole life is but a hard struggle to fight the hungry wolf from the door.

COOLY LABOR.

Herein are comprised the carriers, boatmen, the wheelbarrowmen, &c.

Taking the rates ruling at all the great commercial centers of this empire, the grand average of a man's earning is about $150 cash or 15 cents a day, which is equal to $4.50 per month. But it varies so considerably, according to supplies and demand in different localities, that the minimum is as low as 5 cents a day, while the maximum is as high as 30 cents, without food or lodging. Much also depends upon the physical strength of the men, the endurance and strength of some being actually marvelous. Take, for instance, the tea carriers in the mountainous parts of Western China. They carry on their backs a load of from three hundred to four hundred pounds' weight across difficult mountain passes, and travel with it for twenty consecutive days. They are considered well paid at 25 cents a day.

An ordinary cooly's monthly account would stand about thus:

Receipts in wages		$4 50
Expenditures for food	$3 00	
Expenditures for lodging	50	
Incidental expenses	50	
		4 00
Net income		50

In speaking of the gold diggers on the Han River (in the province of Hupeh), Baron Von Richthofen, when writing to the Shanghai General Chamber of Commerce in 1870, says:

"The diggers earn from 50 to 150 cash, or 5 to 15 cents, a day per head. From the quantity of gravel washed in a certain time, and the yield of one's day's work, which I saw being concentrated in a pan, I calculated that seven men are able to wash twenty tons of gravel a day, and that the average yield in gold is about 3½ to 4 cents a ton."

Coal is mined in many parts of China entirely by hand, and to say that it can be sold at $1 per ton at the pit's mouth, with profit to the owner of the mine, is a striking illustration of the cheapness of human labor in this country.

Most of the cooly labor in China is controlled by certain houses as companies. Strong and reliable coolies are, if possible, kept indebted to them by advancing to the cooly money while they are out of employment; hence, this labor is nearly always under mortgage to the hong (house), and in this way there exists a good deal of slow or forced labor. But the principal secret of success of those companies which sublet cooly laborers seems to be their holding themselves responsible to the employer for the cooly's actions. They undertake to make good any damage, whether arising from dishonesty or carelessness. They prosper, while the coolies almost starve.

In all the foregoing estimates of the cost of the laborer's living no allowance is made for the expenses which the great prevalence of opium-smoking and other vices entail.

HABITS OF CHINESE.

Of the habits of these people I care to say but little. These may be learned from any of the standard works on China. That the Chinese cheerfully sell or pledge their wives and children is admitted by Nevins and other friendly writers. Female children are despised, and for three days after birth covered with old rags to denote the contempt felt for them, and are often numbered like cattle or convicts and not named like human beings. Still, says Nevins, a family of daughters is often a source of great profit to a parent. Infanticide is universal. Three modes are common, namely, to drown in water, to smother, to bury alive. The last method is supposed to possess certain charms. Lying and stealing are not counted vices.

These are a few of the faults which the most friendly writers on China ascribe to these people. I have avoided naming one vice not agreed upon by pro-Chinese writers, and every statement of fact herein made is authenticated. I desire here to state that these are the characteristics of the laboring classes and coolies. The merchants are of much higher grade and are largely exempt from many of these traits.

THE CHINESE IN AMERICA.

In the United States the Chinese possess all the traits of their kind in China, and many others not mentioned by the authorities. Not only do they retain the vices named above, but crimes not named are common. This is fully proved in the evidence taken before the joint committee of 1876 and its report thereon. Females are brought here under contracts and bonds of prostitution; perjuries in our courts are general; murders common, and rewards for the latter openly published in the Chinese language in Chinatown. As to the contamination of our youths by opium and syphilis, it is widespread. Their competition breeds idleness and crime. Of evidence of the above the testimony named is full.

CHINESE COMPETITION.

Charles Crocker, the railroad magnate of California, testifying before the committee, said that the 75,000 Chinese in California do work not respectable for a white to do, and were they driven from their places the same must be filled by whites. I agree with him as to the effect of Chinese exclusion, but differ as to its desirability. All honest labor is honorable, and there are hundreds of thousands of our own kind in Europe and the East imploring any kind of honest work at fair figures. Mr. Crocker being one of the largest employers of men on the Pacific coast, certainly knows the effect of this exclusion. His conclusions as to the effect are largely drawn from the difficulty, if not impossibility, of securing whites during the construction of the Central Pacific Railroad. He should know that the replacement of these 75,000 Chinese by whites would add largely to the population and wealth of California, and ultimately benefit him and his line of railroad.

The replacement of Chinese would, as I state more fully hereafter, stimulate business and encourage further immigration. But for them the population of California would be to-day at least half as large again. They rent houses and partition them into small rooms, frequently constructing a horizontal platform midway between ceiling and floor for the purpose of increasing sleeping capacity. They sleep on hard mat-covered benches or on the floor, packing like sardines, and having but little covering. Twenty will occupy the space that common decency would prevent a man and family from living in. For food they have rice, with a little hog or greens as a relish. Weak tea without milk or sugar is their drink.

Five Chinese do not consume in value as much as one white. They can live on from 10 to 20 cents a day. This was testified to by pro-Chinese witnesses before the committee. As to clothing, they wear little and that of the very cheapest kind. Cotton composes nearly every article of wear. In their persons, habits, and homes they are filthy. The stench of Chinatown is unbearable to all but themselves. A white would starve where a Chinaman could prosper. What chance, then, to raise a family and take on the responsibilities of citizenship?

The Chinese spend but little money with us, dealing almost exclusively among themselves. They come to strip the land, and even provide for sending their bones to China. They do not contribute to our institutions, and it is impossible to learn their wealth for purposes of taxation. When a merchant dies his estate is seldom administered under our laws. Their women are brought here under contracts of prostitution and comprise about 4 per cent. of the Chinese population. They are sold and pledged. The Chinese work on just such wages as will prevent white competition and yet secure to themselves the largest obtainable wages, always being ready to underbid our own people.

But the facts regarding them are best summarized in the report of the joint committee. The evidence of Rev. Otis Gibson, who has charge of a Chinese mission in San Francisco and who is known as one of their strongest advocates, has many strong points which tell against them. Says he (page 408 of report):

> This conceit is so strong and their prejudice against all other people so bitter that, unless under some restraint of circumstance, they seldom fail to manifest contempt for any and all other people except their own, for any and all customs differing from their own, and for any and all learning or science or invention or art differing from the established order of things in their own Middle Kingdom.

Surely a most desirable class. (?)

Yet these are the persons some of our Eastern friends desire to admit unrestricted into this country and permit to enter into competition with their own citizens. This, though as a fact their own States contain a surplus of women who must work or starve or worse. Chinese most largely enter into competition with women.

Massachusetts is the last State from which opposition to this bill should come. The reports of the commissioners of labor show that cheaper labor opposition would be the ruin of her working classes. Even without servile competition the wages of workingmen in Massachusetts do not generally of themselves support their families. The wage-earners are forced to rely upon the assistance of their wives and children. The report of 1876 contains some very suggestive facts for the consideration of our Eastern Congressmen. Let me state one or two facts appearing therein. The rent of the Massachusetts wage-earner is about 22½ per cent. of his wages, and the average rooms to a family are about five. With the Chinese it is at least five Chinese to a room and not 4 per cent. of wages for the same. The conclusions of the commissioners are that in a majority of cases workingmen in Massachusetts are forced to rely on their children for from one-third to one-quarter of the entire family expenses. This

needs no comment. Introduce Chinese competition, and how would our noble Eastern laborer receive his support? The wages of mechanics and artisans in Massachusetts average as high as in other Eastern States and are higher than in many Middle, Western, and Southern States. (See Young's Labor in Europe and America.)

The condition of affairs in New York city is worse than in Massachusetts. When 7,000 women work for an average of $3 per week; when women receive from 25 to 35 cents per dozen for making shirts; when poverty is so great that butchers sell beef in such small quantities as from one to two cents' worth; when many persons are forced to buy two cents' worth of steak and one onion with which to season a meal, it does seem that labor was now far too cheap. When these things exist, as evidence before the present Senate committee investigating the relations of capital and labor shows, it is time to command a halt in the importation of coolies. The people are long forbearing, but there is a limit to endurance.

We need a proper distribution of the labor of our own country, not an importation of coolies. The laborers in the large Eastern cities should be aided to settle in the far West. The brotherhood-of-man doctrine may be hugged to the breasts of some, but the true policy is to provide for our own.

But gentlemen say that without these Chinese we of the Pacific coast would never have reclaimed our swamp lands, nor would our Pacific Railroad have been built. Now, I admit that these works were largely constructed by the Chinese, but I deny that without such labor the roads could not have been completed. I deny that their labor was of special benefit. I believe their presence now and heretofore a curse.

PACIFIC RAILROADS.

As to railroad construction, the Union Pacific and eastern and western roads were constructed by white labor. The Central Pacific Railroad and other Pacific railways could have been built in like manner.

Had they been so constructed by white labor, the wages paid would have been reinvested in this country; demand for goods, lands, and houses been stimulated; the business, settlement, and population increased, and a large immigration secured that is now retarded by the presence of cooly labor.

The greater part of the wages received by the Chinese for their labor on these roads was sent to China. Consequently a large portion of wealth that should have remained with us and added to our growth and prosperity has been withdrawn from circulation.

Another evil effect was to prevent labor being drawn from the overcrowded marts of the East. Every cent paid to Chinese labor on these roads has been kept from the pocket of an American laborer, and by reason of the lesser wages paid it has for every dollar paid a Chinaman put an extra dollar into the coffers of the railroad corporation, which would otherwise have found its way into a white laborer's possession. The road had to be built, and the Government subsidized it liberally, and for the purpose of aiding the people of the United States. Yet the first benefit was received by the cooly of China. Vice-President Colter and others testified in effect before the joint committee that Chinese laborers were paid about one-half the wages given whites.

Now, while it is true that there were not, at the time, enough white laborers in California to supply the demand, it is equally true that there were not enough Chinese. The Chinese had to be imported; the whites could have been brought from the East or Europe. True, the savings of the railroads by the employment of Chinese would have been, in the first place, less; still, the advanced general good arising from the employment of whites would ultimately have compensated them for any temporary loss. Railroads depend for their earnings upon the general prosperity of the country.

Regarding swamp and overflowed lands the facts are about the same.

Mr. Roberts, the president and manager of the Tide-Land Reclamation Company, testified before the committee of 1876:

Q. Could you reclaim these lands with white labor?
A. Not successfully at this time.

Mark, "at this time." In other words, white laborers would have to be brought into the State, which would have taken time and would have cost more. But they would have built up towns, settled lands, and spent all their earnings with us.

Further on he said:

I at one time owned a quarter million of acres (250,000), and then formed a tide-land company or association. I paid all the way from $2 to $3 an acre, although in some cases I got it for half a dollar an acre. I had to pay a dollar to the State besides. * * * (This dollar is refunded.)

He further testified that the cost to reclaim varied. Forty thousand acres were reclaimed at from $6 to $7 per acre. Some smaller pieces cost $25 per acre. After it is reclaimed the land is worth, he says, on an average, $75 per acre. Had white labor been employed the distribution of wealth would have been more equal; all received by the whites would have gone into general circulation. The workingmen would have become permanent settlers among us.

B. S. Brooks, an attorney for the Chinese before the joint committee, said that a surveyor-general of California had calculated for him the wealth produced by Chinese in building railroads and reclaiming tule lands, and it was $289,700,000.

If the ratio of distribution was larger than in Roberts's cases, there would go to Chinese about one quarter of this, or $72,425,000, nearly all of which is sent abroad either for articles they consume (for they seldom buy American goods or from Americans) or as cash savings.

But for Chinese these wages would have been paid whites, who would have come from the East or elsewhere; these wages would have been larger, and all retained or spent in our State. One of the strongest objections to the Chinese in my opinion is the possibility through them of the capitalist gaining exorbitant and undue returns for his investments.

One of the most difficult problems of the age is the relation of capital to labor and the equitable distribution of products. Certainly the profits of capital are large enough. It can care for itself. It can wait and seek openings, whereas labor must find employment or starve. The rapid accumulation and concentration of capital within the past twenty years in the hands of a few and the growing want of the many should influence us on all occasions to protect the labor of our people as best we can. Protectionists claim this is done by high protective duties against the influx of the products of cheap labor. Free-traders, that it is done by permitting unrestricted importation of the products of cheap labor countries. A third class believe there is a proper mean between these extremes. All agree that our labor needs aid in some mode. The ends are alike, the means differ. Here, then, is a case on which all can unite, and protect our laborer not only from the competition of Chinese labor, but also from the contamination of its association.

The Tariff.

SPEECH

OF

HON. MILO WHITE,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884,

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. WHITE, of Minnesota, said:

Mr. CHAIRMAN: I wish to say a word on this question, and for the reason that I am a Republican and yet favor a reduction of the revenue.

I was away from the city during much of the discussion on this bill, but so far since my return it has been a surprise to me that all the speeches on the question seem to shun the true question itself.

These long and able speeches on free trade and on protection are all well enough, but the question is really shall we continue to take from the people fifty or sixty millions of dollars annually more than the needs of the Government require, and no one will dispute the fact that we are doing so now. Fifty million dollars per year will pay all the debts of the Government, and last year we had a surplus of $130,000,000, and we are told by experts that we will have $110,000,000 of surplus this year, and we are so near the end of the fiscal year that we can approximate very closely to the amount.

Now, Mr. Chairman, I do not believe any party will dare go before the people with the proper issue, the real issue, and favor taking from them $60,000,000 more than is needed. There was once found to be a surplus of money in the Treasury, and, as the gentleman from Georgia [Mr. HAMMOND] said, it was loaned to the States subject to call, but when the nation in its greatest need sought to call for its own the members of Congress from the States which had the money voted not to call it in, and so it never was paid and never will be, and now no one on this floor, so far as I know, favors dividing the surplus among the States.

Does any member here object to all the protection incident to all the tariff needed? If so that member is a free-trader indeed. I for one am willing to allow the tariff to remain adjusted as it was under the act of March, 1883, with a few changes, but with a reduction, a horizontal reduction if you please, from this fact and for this reason, namely, the act of 1883 was the outcome of a vast amount of work by the Tariff Commission and by Congress, and ought to have been about as near right as the wisdom of that Congress could make it. And if the act of 1883 was as near right as it was claimed to be when passed, then the fact that it did not reduce the revenues as much as was anticipated is the question now before us, and I want the income reduced, and I am not one of those who say a reduction of the tariff will increase the revenue and in the next breath say the act of 1883 did reduce and will reduce the income more after further time.

Now, Mr. Chairman, one will say retire your bonds, but in another argument will say stop paying the public debt, because you will wipe out the national banks, "the best system the world ever saw." Mr. Chairman, we all know that the money taken from the people must be

paid out, or in a short time a stringency will come, and to keep the financial machinery running smoothly a call for bonds is made and the surplus paid out. If this was not done and all the money kept in the Treasury, you might go on and take all the money from the people and stop all business; but we have paid so much of the debt which we owed at the close of the war, and interest is so low and the bonds subject to call being reduced so fast, that we will be forced to go into the market and pay such price for bonds as Wall street sees fit to ask or we must do something else with the money, and I say leave it with its owners, the people.

Mr. Chairman, we have heard of the great benefit of the protective policy of our Government. One gentleman, my friend from Michigan [Mr. CUTCHEON], said a protectionist was enabled to live better and die better, and if I understood him correctly fare better in the great hereafter, intimating that no free-trader would get a good quarter-section in the temperate zone of heaven; but, Mr. Chairman, I believe we ought to deal justly with our fellow-men and obey our Creater, trusting Him to govern the great hereafter rather than setting up a protective policy for heaven, for we may find a better state of things there than we ever even dreamed of here. It has been urged here over and over again that our protective policy was the greatest aid to the agriculturist, the farmer. Now let us see how it works: We in our State raise large quantities of wheat, and I suppose our protectionist friends will say you are protected. We put a duty of 20 cents per bushel on wheat.

Now, bless your innocent souls, every farmer among us knows that we get just what dealers can pay for wheat, basing the price on Liverpool, deducting freight, elevator charge, interest, insurance, commissions, a fair margin, &c. You from the East come to Chicago and buy what you want in the open market, and pay no more than the relative Liverpool value. The same is true of pork, beef, and corn; and if you do use 90 per cent. of all our produce, you do not of our great staple, wheat. So we who do the hardest of the work get the least pay, wear the poorest clothes, and pay the highest price for all we buy. Give us cheaper goods, and we will give you cheaper provisions; make your goods a little cheaper and you can sell in other lands. You can not do so now. We furnish you the best breadstuffs in the world, and cheaper than the English manufacturer gets them. We are doing our share to enable you to send your goods to Mexico and to South America.

Last year we took forty-nine million dollars' worth of coffee from Brazil and paid $38,000,000 of it in gold. Do as England is doing in wheat, getting it elsewhere than where gold must be paid for it. Brazil taxes our pork 4 cents per pound, hams 5 cents; and we should buy coffee of Mexico, where we can sell our productions. Cultivate trade with our friends and they will cultivate more coffee, and let Brazil keep her coffee so long as she discriminates against us. What, Mr. Chairman, is the tendency of the times; is it not toward the increase of millionaires and tramps? We can remember when we had very few of either, and if we go on as we have been going we will soon have nothing else. And do you think the people will be happy then? Will we not rather have such work as at Pittsburgh a few years ago?

Is a tariff of 10 per cent. on diamonds and 60 to 100 per cent. on woolen goods conducive to comfort for the poor, yea, for the great middle classes in my State, where the mercury reaches thirty degrees below zero every winter? I wish to protest against such legislation, and would gladly join in amending the pending bill; but I give notice here that I will vote for a horizontal reduction if nothing better can be had, even if it does reduce the tariff on diamonds to 8 per cent. and leave the manufactures of wool at 56 per cent.

We are forced to compete with all the world and in the open markets of the world in our productions, and pay 62 per cent. on our woolen goods in duty, 55 per cent. on glass and earthern ware; and still we found no fault so long as the money was needed, but when it is not needed we object.

Mr. Chairman, our farms have changed hands on an average twice already since we made them in my State; yes, sir, twice on mortgages in thirty years, going into the hands of these Eastern men, who still cry out for more protection. Money loaned at 40 per cent. out in our country in 1855 and so on down to 12, until the whole property changed hands. Mr. Chairman, the gentleman from Connecticut [Mr. EATON] said that there were now sixty articles manufactured in his State which need no protection. And I met a gentleman this week who is manufacturing down in Virginia and sending his productions to England, and is prosperous and a free-trader.

Now, I apprehend that if we had facilities of transportation on the water as we have by our railroads on the land we would very soon be putting our productions into South America and into different countries where we send none now, and I commend to the attention of our manufacturing friends in New England the carrying trade on the high seas, in which calling many thousands of our people can find employment profitably, if we foster that interest as we should. We can not reach Rio Janeiro so quickly or so cheaply direct as we can by way of England.

Mr. Chairman, if we can not amend this bill, then I for one will vote for it as it is, if we can get to a vote on the main question; and I know that to be the sentiment of the people of my State.

The Public Domain.

REMARKS
OF
HON. A. X. PARKER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Friday, July 4, 1884,
On the public domain.

Mr. PARKER said:

Mr. SPEAKER: Although much has been said in relation to the public domain of the United States, I wish to present some further facts and considerations connected therewith.

The total national domain, including States, Territories, reservations, and Alaska, is 2,291,376.338 acres. The public domain remaining undisposed of is shown by the following statement made by the Commissioner of the General Land Office:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., July 2, 1884.

SIR: In reply to your verbal request of the 30th ultimo I have to state that the area of the public lands is estimated as follows:

	Acres.
Area surveyed to June 30, 1883	886,367,361.00
Area unsurveyed to July 1, 1883, estimated	928,426,577.00
Total	1,814,793,938.00
It is estimated that there have been disposed of to and including June 30, 1883	631,743,227.96
Surveyed and unsold to July 1, 1883	254,624,133.04
Unsurveyed and unsold to July 1, 1883	928,426,577.00
Area remaining undisposed of July 1, 1883	1,183,050,710.04
Of this approximated area remaining it is estimated to be divided as follows:	
Alaska	369,529,600.00
Indian reservations	135,998,101.00
Military reservations	3,155,152.76
Public land strip	3,672,640.00
Miscellaneous	670,695,216.28
Total	1,183,050,710.04

The total area given is taken from the report of this office for 1883, page 57, and the area surveyed and unsurveyed from the same source.

The estimated area remaining is given on pages 527 and 528, Public Domain, 1883, and the area disposed of is found by deducting the area remaining from the area of the public lands surveyed and the estimated area unsurveyed, but all areas excepting the area actually surveyed are only approximately correct.

Very respectfully,

N. C. MCFARLAND, *Comissioner.*

Hon. A. X. PARKER,
House of Representatives.

ALASKA.

Alaska is unsurveyed and much of it unexplored. It is but just receiving a quasi-territorial government. It is unquestionably of great value in its fisheries, timber, and minerals.

INDIAN RESERVATIONS.

Total number June 30, 1883, was one hundred and thirty-seven, containing 135,998,101 acres, with an estimated population of 259,632, or about five hundred and twenty-nine acres to each Indian.

THE PUBLIC LAND STRIP.

is a tract lying west of Indian Territory and south of Kansas, and is outside of any State or Territory, and is unorganized, and unnamed except as the "public land strip."

There were June 30, 1883, one hundred and seventy-seven military reservations.

SCHOOL GRANTS.

There have been land grants for school purposes amounting to nearly 79,000,000 acres.

BOUNTY GRANTS.

The military and naval bounty-land grants aggregate over 61,000,000 acres.

Public attention is being sharply called to the disposition and ownership of vast areas of lands that within the remembrance of men yet in active life have passed from the public domain. Not only has there been a marvelous increase in the number of farms and homes, but great tracts have been acquired by individual citizen holders, by nonresident holders and foreign corporations, and by railroad corporations.

The public domain is being reduced with unnatural rapidity, and in part by fraudulent methods. Commissioner McFarland, of the General Land Office, in a communication to the Secretary of the Interior, dated May 15, 1884, says:

The number of original entries filed during the calendar year 1882 was 163,190. The number filed in 1883 was 251,571. The current increase shows that the number filed the present year will exceed 300,000. There are some 600,000 claims of record now before this office, chiefly under the pre-emption, homestead, timber-culture, timber-land, and desert land laws, involving not less than 75,000,000 acres, and of those claims, entries aggregating many millions of acres are believed to be fraudulent, and each day adds to this accumulation. I have given my best endeavors to the protection of public lands so far as the present state of the law and the limited means at my disposal would permit.

The title to over 27,000,000 acres of the public lands was initiated in the year 1883.

CITIZEN OWNERS.

The following list shows some of the large holdings of American citizens:

	Acres.
Hon. C. F. Brainerd, of Brainerd, in Arizona	140,000
Hon. George Hearst, San Francisco	48,000
A. P. Moore, Santa Rosa, Cal	138,000
The Murphy estate, Santa Clara	150,000
F. C. Sherwin, in New Mexico	600,000
Dorsey	500,000
Whitmore & Co., of Wisconsin, in Alabama	35,000
J. W. Illiffe, Colorado	15,000
Grandin Brothers, of Tidioute, Pa., in Dakota	40,000
Oliver Dalrymple, of Saint Paul, Minn	500,000
H. Disston, of Philadelphia	2,000,000
Hon. William Larabee, in Iowa	18,000
Walter Brown, of Kansas, in Kansas	43,000
Morrill & Co., in Kansas	102,000
J. B. Watkins, Louisiana	1,225,000
Daniel Murphy, Nevada	200,000
Mr. David Seltzer, of Ohio	25,000
Thompson & Warner, Minnesota	50,000
J. B. Walker, Minneapolis	50,000
Hon. J. S. Pillsbury, Minneapolis	30,000
J. M. Richmond & Co., of Buffalo, in Missouri	150,000
Michael Brand, sr., Missouri	100,000
Hiram H. Sibley	500,000
William Clark	30,000
The David Raleigh estate, in New Jersey	30,000
Chenango and Alleghany Railroad Company	50,000
R. D. George, South Carolina	25,000
Colonel Meyer, Wisconsin	35,000
	6,829,000

AMERICAN LANDS HELD BY FOREIGN OWNERS.

The following table has been several times presented, and is doubtless substantially correct. No kind of "foreign interference" can be more offensive to Americans:

	Acres.
An English syndicate, No. 3, in Texas	3,000,000
The Holland Land Company, New Mexico	4,500,000
Sir Edward Reid and a syndicate, in Florida	2,000,000
English syndicate, in Mississippi	1,800,000
Marquis of Tweedale	1,750,000
Phillips, Marshall & Co., London	1,300,000
German syndicate	1,100,000
Anglo-American syndicate, Mr. Rogers, president, London	750,000
Byran H. Evans, of London, in Mississippi	700,000
Duke of Sutherland	425,000
British Land Company, in Kansas	320,000
William Whalley, M. P., Peterborough, England	310,000
Missouri Land Company, Edinburgh, Scotland	300,000
Robert Tennant, of London	230,000
Dundee Land Company, Scotland	247,000
Lord Dunmore	120,000
Benjamin Newgas, Liverpool	100,000
Lord Houghton, in Florida	60,000
Lord Dunraven, in Colorado	60,000
English Land Company, in Florida	50,000
English Land Company, in Arkansas	50,000
Albert Peel, M. P., Leicestershire, England	10,000
Sir J. L. Kay, Yorkshire, England	5,000
Alexander Grant, of London, in Kansas	35,000
English syndicate (represented by Close Brothers), Wisconsin	110,000
M. Ellerhauser, of Halifax, Nova Scotia, in West Virginia	600,000
A Scotch syndicate, in Florida	500,000
A. Boysen, Danish consul, in Florida	50,000
Missouri Land Company, of Edinburgh, Scotland	165,000
Total	20,747,000

THE LESSON OF GREAT BRITAIN.

A well-informed English writer states that—

The total area of England and Wales, not including London, is 37,243,859 acres. One man owns more than 186,397 acres, another more than 132,996 acres, and another more than 102,785 acres. Sixty-six persons own an aggregate of 1,917,076 acres; one hundred persons own 3,917,641 acres; two hundred and eighty persons own 5,425,754 acres, or nearly a sixth of England and Wales; and seven hundred and ten persons own one-fourth of all England and Wales. A very moderate-sized church would hold all of these princely landlords.

The totel area of Scotland is 18,940,694 acres. One man owns 1,358,425 acres; a second owns 431,000 acres; a third, 424,000 acres; a fourth, 373,000; and a fifth, 306,000 acres. Twelve persons own nearly one-fourth of Scotland, and twenty persons have more than 120,000 acres each. Seventy persons have about 9,400,000 acres, or about one-half of Scotland, and 1,700 persons own no less than nine-tenths of the whole of Scotland. Nowhere else in the whole kingdom have the small peasant proprietors suffered as badly as here. Whole districts have been almost depopulated to make room for game parks, and where hundreds of thousands of sheep used to feed only deer are kept.

The area of Ireland is 20,159,678 acres. One person owns 170,119; three persons own more than 100,000 acres each; fourteen persons own more than 50,000 acres each; ninety persons own more than 20,000 acres each; and one hundred and thirty-five own more than 10,000 acres each. Seven hundred and forty-four persons own 9,512,728 acres, or nearly half the entire island.

In the whole United Kingdom eight persons own more than 220,000 acres each, and no less than forty-one persons own more than 100,000 acres each. I give the number of acres held by a few of the largest owners:

	Acres.
Duke of Sutherland	1,358,425
Duke of Buccleugh and Queensbury	459,269
Sir James Matheson	405,070
Earl of Breadalbane	372,729
Earl of Seafield	305,891
Duke of Richmond	285,407
Earl of Fife	257,652
Alexander Matheson	220,433
Duke of Athol	194,640
Duke of Devonshire	108,121
Duke of Northumberland	185,515
Duke of Argyll	175,114

European capitalists as well as our own are employing in America that land policy that has proved so disastrous to the middle and poorer classes of England, Scotland, Wales, and Ireland.

Our country is becoming the pasture-land, the cattle-field, and sheep-walk of foreign landlords; we are furnishing outlying lands for foreigners of wealth whose interests are antagonistic to our own. This is monopoly in its most hurtful form and outside influence in its most impertinent assumption. No true American can consider it without a feeling of aggravation and hostility.

RAILROAD LAND GRANTS.

There were granted to States lands to aid in the construction of railroads, from September 20, 1850, to July 25, 1866, inclusive, 53,490,263 acres. The grants to corporations to aid in the construction of railroads, from July 1, 1862, to May 4, 1870, inclusive, aggregate 137,208,688 acres, making a total of railroad land grants of 190,698,695 acres.

Statement showing the Administration and Congress making the principal grants, respectively.

Administration and Congress.	Year.	Acres granted.
President Fillmore (first session Thirty-first Congress)	1850	3,751,711.73
President Fillmore (first session Thirty-second Congress)	1852	1,764,711.00
President Fillmore (second session Thirty-second Congress)	1853	2,682,171.00
Total under President Fillmore		8,198,593.73
President Pierce (first session Thirty-fourth Congress)	1856	14,559,729.79
President Pierce (third session Thirty-fourth Congress)		5,118,450.00
Total under President Pierce		19,678,179.79
President Lincoln (second session Thirty-seventh Congress)	1862	23,504,001.61
President Lincoln (third session Thirty-seventh Congress)	1863	3,915,200.00
President Lincoln (first session Thirty-eighth Congress)	1864	46,848,600.00
President Lincoln (second session Thirty-eighth Congress)	1865	128,000.00
Total under President Lincoln		74,395,801.61
President Johnson (first session Thirty-ninth Congress)	1866	34,001,297.77
President Johnson (third session Fortieth Congress)	1869	
Total under President Johnson		34,001,297.77
President Grant (second session Fortieth Congress)	1870	1,000,000.00
President Grant (third session Forty-first Congress)	1871	17,903,218.00
President Grant (second session Forty-second Congress)	1872	327,903.69
Total under President Grant		19,231,121.69
Grand total		155,504,994.59

Doubtless great prosperity has been carried to remote localities by the construction of railroads that could not have been built without Government aid. It is neither fair nor just to condemn those who honestly sought to develop and have developed the waste places of the country by giving them means of communication. But aid has sometimes grown from compensation into gift and has formed the basis of combination and speculation, yet in the main I believe that the grants have been honestly made. The time has come for a change of policy and for settlement with the recipients of the nation's bounty.

Our population is increasing with sufficient rapidity, and the settlement of the country does not need to be stimulated. The unborn have the right to be protected in their inheritance. It is now neither policy nor justice to solicit the poor of all nations to occupy our lands. The fit immigrant who comes to stay and to become Americanized is welcome; but we have the right to exercise some care and circumspection. Not only have immense amounts of land been acquired as stated, but men and corporations have, by force and without right, taken possession of and fenced against their rivals, prospective settlers, mail-carriers, travelers, and the Government, tracts of great proportions and value.

Deputy Surveyor Fairfield, of Nebraska, reports, November 26, 1883, as follows as to public lands in Northwestern Nebraska:

The whole country embraced in my contract is occupied and run by capitalists engaged in cattle-raising, who have hundreds of miles of wire fence constructed to inclose all desirable land, including water courses, to form barriers for their cattle and prevent settlers from occupying the land. They also represent that they have desert and timber claims upon the land they have inclosed. Upon their fences they have posted at intervals notices as follows: "The son of a bitch who opens the fence had better look out for his scalp."

The fences are built often so as to inclose several sections in one stock-ranch, and the ranches are joined together from the mountains clear around to the mountains again.

The statement of the acting Commissioner of the General Land Office, in March, 1884, submitted to Congress with certain communications, shows that—

The information serves to show the general fact of the existence upon a large scale, and to an unknown extent, of unauthorized fencing of public lands; the manner in which it is done, and the purpose and effect of the inclosures. The reports of special agents also show that fraudulent entries of public land within the inclosures are extensively made by the procurement and in the interest of stockmen, largely for the purpose of controlling the sources of water supply.

* * * * * * *

Among the cases specially reported are those of the Arkansas Valley Com-

pany, in Colorado, whose inclosures embrace upward of 1,000,000 acres; the Prairie Cattle Company (Scotch), in Colorado, upward of 1,000,000 acres; H. H. Metcalf, River Bend, Colo., 200,000 acres; John W. Prowers, Colorado, 200,000 acres; McDaniel & Davis, Colorado, 75,000 acres; Routchler & Lamb, Colorado, 40,000 acres; J. W. Frank, Colorado, 40,000 acres; Garnett & Langford, Colorado, 30,000 acres; E. C. Tane, Colorado, 50,000 acres; Leivesy Brothers, Colorado, 150,000 acres; Vrooman & McFife, Colorado, 50,000 acres; Beatty Brothers, Colorado, 40,000 acres; Chick, Brown & Co., Colorado, 30,000 acres; Reynolds Cattle Company, Colorado, 50,000 acres; several other cases in Colorado embracing from 10,000 acres to 30,000 acres; Brighton Ranch, Nebraska, 125,000 acres; Coe & Carter, Nebraska, 50 miles of fence; J. W. Wilson, Nebraska, 40 miles of fence; J. W. Bosler, 20 miles; William Humphrey, Nevada, 30 miles; Nelson & Son, Nevada, 22 miles; Kennebeck Ranch, Nebraska, 20,000 to 50,000 acres.

In Kansas, entire counties are reported as fenced. In Wyoming one hundred and twenty-five large cattle companies are reported having fencing on the public lands. Among the companies and persons reported as having "immense" or "very large" areas inclosed, but specific quantities not mentioned, are the Dubuque, Cimarron, and Renello Cattle Companies, of New Mexico; the Carlisle Cattle Company (English), in Colorado; the Marquis de Morales, in Dakota; the Wyoming Cattle Company (Scotch), in Wyoming; the Rankin Live-Stock Company, in Nebraska. Several companies and persons in Montana and elsewhere are mentioned as having inclosures, with no data.

The Department of the Interior is doing all in its power to protect settlers and guard the public lands, but the vastness of the territory operated upon, the distant locations, the limited means at hand, and the desperate activity of the lawless stockmen who are upon the ground in possession, sometimes claiming under color of law, and controlling men and capital, render it almost impossible to immediately enforce the rights of the Government. As to all of these encroachments upon public interests and citizens' rights we have our duty to perform. There must be no more granting of lands to aid in the building of railroads. We must recover all lands that have been offered in such aid in all cases where the companies have failed to earn the lands and the right to recover fairly and honorably exists in the Government.

Let us guard the rights of the American child. Let us, with due prudence, recognize the privilege of the coming immigrant to acquire citizenship, with its duties and benefits. Let us compel the lawless fencers to abandon what they have seized and loosen their clutch upon the lands of the people. Let us build up an American policy. Let us secure our lands for citizens of the United States. Let us encourage the making of farms; encourage the building of homes; discourage the sale of large areas to citizens or to domestic corporations; prohibit absolutely the acquiring of the public domain by foreign corporations; prohibit the acquisition of public lands by non-resident foreigners, except upon the consent of our Government first obtained; terminate the claims and possession of all foreign non-resident occupants so far and as soon as it can be done justly and without violating vested rights. Thus shall we preserve what is left of our once magnificent and still valuable public domain.

The Tariff.

The old contest between Clay and Calhoun is revived, and we who followed Calhoun to destruction should now turn and follow Clay to resurrection.

SPEECH

OF

HON. JAMES R. CHALMERS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 25, 1884,

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. CHALMERS said:

Mr. CHAIRMAN: Having been robbed of my certificate of election by the hasty action of the governor of Mississippi, founded on a false declaration of the election of another by the secretary of state, and having been delayed by the tardy action of the Committee on Elections from admission to my seat here until after the discussion on the tariff question was closed, I take this opportunity to express my views on that subject.

I never seriously studied the tariff question until within the last two years, but during that time I have diligently read all that I could on that subject. When I became a voter in 1852 the tariff and all other economic questions were lost sight of in the South in the fierce contest then arising over the introduction of slaves into the new Territories, which continued until it culminated and ended in war. Slave labor was best adapted to agriculture, and its interest demanded free foreign trade. Our men of wealth, instead of investing in manufactures and encouraging free labor, invested their money in slaves and drove free labor away. They regarded a protective tariff as a bounty to free labor and to the North, at the expense of slave labor and the South, and we opposed it. Mr. Calhoun was then the great apostle of the South, and he taught us that a strict construction of the Constitution was necessary to the preservation of slavery, and that the same strict construction precluded the General Government from making internal improvements and from protecting home manufactures. Mr. Clay, the great leader of the old Whig party, taught us opposite doctrines; but he had favored the gradual emancipation of slaves and opposed the annexation of Texas, and the South turned a deaf ear to his teachings. Believing Mr. Calhoun in one respect, I had followed him in all. But when the war into which his doctrines led us was over, and I began to study the question of internal improvements and saw how much the South had lost by following the later teachings of Mr. Calhoun, I learned to appreciate more highly the genius of Mr. Clay. And I acknowledge my change of opinion with less reluctance when I know that Mr. Calhoun changed his own opinions both as to internal improvements and the tariff.

THE PROPHECIES OF HENRY CLAY FULFILLED.

And now, since I have studied the tariff question, I have learned still further to understand and admire the far-reaching intellect and the broad patriotism of the great Kentucky statesman. When he proclaimed the doctrine of protecting home industries in 1824, Mr. Webster opposed him and said it would destroy New England, which was largely engaged in commerce, and hence supposed to be dependent on free trade. Mr. Clay replied that the gentleman did not understand his own people, and that none in the Union would more quickly adapt themselves to the American system than the shrewd people of New England. And his prophecy was so soon fulfilled that in 1828, when the subject came up again for discussion, Mr. Webster was found by his side fighting for protection. And then, with still more prophetic wisdom, he said to the Representatives of Virginia that no city in the Union was better adapted to manufacturing than Richmond, Va., and that the time would come when it would advance more rapidly than any city in the Union in industrial pursuits. That was said more than a half century ago, and the prophecy is now being fulfilled.

Generations that taught free trade in the interest of slavery have passed away, and Virginia, which was once a great breeding farm of slaves for the South, has changed her course, and, like a tempest-tossed vessel after a severe storm, has righted up and is now heading for the port of safety and prosperity which Mr. Clay pointed out.

IS PROTECTION CONSTITUTIONAL?

Trained as I had been in the Calhoun school of politics, the first question to which I directed my attention was, is protection constitutional; and a careful examination of the acts and teachings of the early fathers has convinced me that it is constitutional.

WASHINGTON.

Washington declared in his first message to Congress that "the safety and interest of the people require that they should promote such manufactures as tend to render them independent of others for essentials, particularly for military supplies."

And in his second message he said:

Congress has repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts in every way that shall appear eligible.

He presided over the convention which framed the Constitution, and must certainly have understood what it meant.

THOMAS JEFFERSON.

Mr. Jefferson, in a report to Congress December 16, 1793, said:

Where a nation imposes high duties on our productions, or prohibits them altogether, it may be proper for us to do the same by theirs; first burdening or excluding those productions which they bring here in competition with our own of the same kind; selecting next such manufactures as we take from them in greatest quantity, and which at the same time we could the soonest furnish to ourselves or obtain from other countries; imposing on them duties, lighter at first but heavier and heavier afterward as other channels of supply open. Such duties having the effect of indirect encouragement to domestic manufactures of the same kind may induce the manufacturer to come himself into these States, where cheaper subsistence, equal laws, and a vent of his wares, free of duty, may insure him the highest profits from his skill and industry.

In his message as President, November 8, 1808, he said:

The situation into which we have been thus forced has impelled us to apply a portion of our industry and capital to internal manufactures and improvements. The extent of this conversion is daily increasing, and little doubt remains that the establishments formed and forming will, under the auspices of cheaper materials and subsistence, the freedom of labor from [internal] taxation with us, and of protecting duties and prohibitions, become permanent.

In a letter to Jean Baptiste Say, March 2, 1815, he said:

The prohibition duties we lay on all articles of foreign manufacture which prudence requires us to establish at home, with the patriotic determination of every good citizen to use no foreign article which can be made within ourselves, without regard to difference of price, secures us against a relapse into foreign dependency.

Again, in a letter to Benjamin Austin, January 20, 1816, he says:

To be independent for the comforts of life we must fabricate them ourselves. We must now place the manufacturer by the side of the agriculturist. The former question is suppressed, or rather assumes a new form. Shall we make our own comforts, or go without them, at the will of a foreign nation? He, therefore, who is now against domestic manufacture must be for reducing us either to dependence on that foreign nation or to be clothed in skins, and to live like wild beasts in dens and caverns. I am not one of those. Experience has taught me that manufactures are now as necessary to our independence as to our comfort, and if those who now quote me as of a different opinion will keep pace with me in purchasing nothing foreign where an equivalent of domestic fabric can be obtained, without regard to difference of price, it will not be our fault if we do not soon have a supply at home equal to our demand, and wrest that weapon of distress from the hand which has wielded it.

JAMES MADISON.

But the most convincing testimony is that which is furnished by Mr. Madison, who has been called the father of the Constitution. He not only shows that protection is constitutional, but shows that it comes under the power to regulate commerce.

It is an invariable rule of construction that the words of an instrument must be construed according to their established signification at the time. During the ten years from 1764 to 1774, when our fathers were discussing the power of the British Parliament, a well-defined distinction was drawn between the power of England to make trade regulations and commercial restrictions over the colonies, which produced incidental revenue, and the power of direct taxation. The first was admitted but the latter denied by the colonies. To protect her manufactures and commerce England passed laws that were called commercial restrictions, and the right to do this was not denied. Again, during the four years intervening between the treaty of peace and the formation of the Union the separate States made their own laws for taxing or admitting free the manufactures of other countries; and these were called commercial regulations, as will be seen from the discussions at that time, which are so elaborately set out by Rufus Choate in his speech in the United States Senate, March 14, 1842.

One of the great objects of forming a more perfect union was to give to it the power to make commercial regulations as to the introduction of foreign manufactures and the protection of home industries.

New York and Pennsylvania, while separate States, had made such regulations to encourage their own manufactures, but their efforts were unavailing while neighboring States permitted free trade. Hence the great necessity for the Union. In the Massachusetts convention which adopted the Constitution, Mr. Dawes said:

Our manufactures is another great subject which has received no encouragement by national duties on foreign manufactures, and they never can by any authority in the old confederation. If we wish to encourage our own manufactures, to preserve our own commerce, to raise the value of our own lands we must give Congress the power in question.

Now, Mr. Madison says the power to protect manufactures was given and intended to be given in the power to regulate commerce. He says:

That the encouragement of manufactures was an object of the power to regulate trade is proved by the use of the power for that object, at the first session of the First Congress under the Constitution, when among the members present were so many who had been members of the Federal convention which framed the Constitution, and of the State conventions which ratified it.

Within the first week after the meeting of the First Congress Mr. Madison brought forward the first tariff bill with this preamble:

Whereas it is necessary for the support of the Government, for the discharge of the debt of the United States, and the encouragement and protection of manufactures, that duties be levied on goods, wares, and merchandise imported. (See United States Statutes at Large, volume 1, page 24.)

And three days afterward a petition was presented from the tradesmen and mechanics of Baltimore, in which the petitioners said—

They confidently hoped that the encouragement and protection of American manufactures will claim the earliest attention of the supreme legislature of the nation.

The next day came a similar petition from the shipwrights of Charleston, S. C. About the same time came a similar petition from New York city, and a few days after another from Boston, in which they said:

Your petitioners formerly experienced the patronage of this State Legislature in their acts of laying duties and prohibitions on certain articles of manufacture which encourages your petitioners to request that heavy duties may be laid upon such articles as are manufactured by our own citizens; humbly conceiving that the impost is considered by Congress not solely as an object of revenue, but in its operation intended to exclude such importations and ultimately establish these several branches of manufacture among ourselves.

These facts, which I take from Mason's admirable short history of the tariff, show what the people who had just ratified the Constitution understood it to mean.

Mr. Madison, when President, in his special message, February 20, 1815, said:

But there is no subject that can enter with greater force and merit into the deliberations of Congress than a consideration of the means to preserve and promote the manufactures which have sprung into existence and attained an unparalleled maturity throughout the United States during the period of the European wars. This source of national independence and wealth I anxiously recommend, therefore, to the prompt and constant guardianship of Congress.

Again, in 1828, he said:

A further evidence in support of the constitutional power to protect and foster manufactures by regulations of trade—an evidence that ought of itself to settle the question—is the uniform and political sanction given in that power for nearly forty years, with a concurrence or acquiescence of every State government throughout the same period, and, it may be added, through all the vicissitudes of party which marked that period.

I turn now to the declaration of Andrew Jackson to Mr. Polk's Kane letter, and passing over Mr. Buchanan, the father of the Randall idea of Democracy in Pennsylvania, I give also the declaration of General Hancock, the last Democratic candidate for President.

ANDREW JACKSON.

In April, 1824, Dr. L. H. Coleman, a prominent member of the Virginia Legislature, addressed the following letter to General Jackson:

WARRENTON, VA., *April* 21, 1824.

DEAR SIR: Being one of the six members of the Virginia assembly in caucus last winter who voted for you as a fit and proper person to be supported by the people of the State for the Presidency of the United States, and having since heard that you are in favor of the "protective-duty policy," I take the liberty of desiring you to inform me whether you intend voting for the tariff bill now before Congress. I wish to have information on the subject as soon as your convenience will permit, that I may answer the Fredericksburg committee, who invite my co-operation in getting up a ticket for the hero of New Orleans. In this county you have many friends, and some think your support will be better in Petersburg than in any of the contiguous counties. We are anti-tariff here; and candor requires me to say that should you be the advocate of a measure to which our interest is evidently opposed, the zeal with which you have been hitherto supported will be relaxed.

I am, &c.,

L. H. COLEMAN.

To which the old hero boldly replied as follows:

WASHINGTON CITY, *April* 26, 1824.

SIR: I have had the honor this day to receive your letter of the 21st instant, and with candor shall reply to it. * * * You ask me my opinion on the tariff. I answer that I am in favor of a judicious examination and revision of it; and so far as the tariff before us embraces the design of fostering, protecting, and preserving within ourselves the means of national defense and independence, particularly in a state of war, I would advocate and support it. The experience of the late war ought to teach us a lesson, and one never to be forgotten.

* * * * * * *

Heaven smiled upon and gave us liberty and independence. That same Providence has blessed us with the means of national independence and national defense. If we omit or refuse to use the gifts which He has extended to us we deserve not the continuation of His blessings. He has filled our mountains and our plains with minerals, with lead, iron, and copper, and given us a climate and soil for the growing of hemp and wool.

These being the grand materials of our national defense, they ought to have extended to them adequate and fair protection, that our own manufactories and laborers may be placed on a fair competition with those of Europe, and that we may have within our own country a supply of those leading and important articles so essential to war.

Beyond this I look at the tariff with an eye to the proper distribution of labor and revenue, and with a view to discharge our national debt. I am one of those who do not believe that a national debt is a national blessing, but rather a curse to a republic, inasmuch as it is calculated to raise around the administration a moneyed aristocracy dangerous to the liberties of the country.

This tariff, I mean a judicious one, possesses more fanciful than real dangers. I will ask what is the real situation of the agriculturist? Where has the American farmer a market for his surplus products? Except for cotton he has neither a foreign nor a home market. Does not this clearly prove, when there is no market either at home or abroad, that there is too much labor employed in agriculture and that the channels of labor should be multiplied? Common sense points out at once the remedy. Draw from agriculture the superabundant labor, employ it in mechanism and manufactures, thereby creating a home market for your breadstuffs and distributing labor to a most profitable account, and benefits to the country will result.

Take from agriculture in the United States 600,000 men, women, and children, and you at once give a home market for more breadstuffs than all Europe now furnishes us. In short, sir, we have been too long subject to the policy of the British merchants. It is time we should become a little more Americanized, and instead of feeding the paupers and laborers of Europe, feed our own, or else in a short time, by continuing our present policy, we shall all be paupers ourselves.

It is therefore my opinion that a careful tariff is much wanted to pay our national debt and afford us the means of that defense within ourselves on which the safety and liberty of our country depend, and last, though not least, give a proper distribution to our labor, which must prove beneficial to the happiness, independence, and wealth of the community. * * *

I have presented you my opinions freely, because I am without concealment, and should indeed despise myself if I could believe myself capable of acquiring the confidence of any by means so ignoble.

I am, sir, very respectfully, your obedient servant,

ANDREW JACKSON.

In his second annual message he said:

The object of the tariff is objected to by some as unconstitutional, and it is considered by almost all as defective in many of its parts. The power to impose duties on imports originally belonged to the several States. The right to adjust those duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole authority over imports to the General Government without limitation or restriction, saving the very inconsiderable reservation relating to their inspection laws. This authority having thus entirely passed from the States, the right to exercise it for the purpose of protection does not exist in them, and consequently if it be not possessed by the General Government it must be extinct.

Our political system would thus present the anomaly of a people stripped of the right to foster their own industry and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely can not be the case; this indispensable power thus surrendered by the States must be within the scope of the authority on this subject expressly delegated to Congress. In this conclusion I am confirmed as well by the opinions of Presidents Washington, Jefferson, Madison, and Monroe, who have each repeatedly recommended the exercise of this right under the Constitution, as by the uniform practice of Congress, the continued acquiescence of the States, and the general understanding of the people.

Again, he said in his message in 1830:

While the chief object of duties should be revenue they may be so adjusted as to encourage manufactures. In this adjustment, however, it is the duty of the Government to be guided by the general good. Objects of national importance alone ought to be protected. Of these the productions of our soil, our mines, and our workshops, essential to national defense, occupy the first rank. Whatever other species of domestic industry, having the importance to which I have referred, may be expected after temporary protection to compete with foreign labor on equal terms, merit the same attention in a subordinate degree.

And he was elected on a platform of which the following resolution was a part:

Resolved, That an adequate protection to American industries is indispensable to the prosperity of the country, and that an abandonment of that policy at this period would be attended with serious consequences to the nation.

JAMES K. POLK.

Mr. Polk carried Pennsylvania over Henry Clay, the great author of the American system, and what enabled him to do it was his Kane letter, in which he said he was in favor of "discriminating duties such as would produce the revenue needed and at the same time afford reasonable incidental protection to our home industry."

GENERAL HANCOCK,

the last Democratic candidate for President, wrote as follows:

MY DEAR GOVERNOR: I have received your favor of the 11th instant. In my letter of acceptance I expressed my full sympathy with our American industries. I thought I spoke plainly enough to satisfy our Jersey friends regarding my tariff views. I am too sound an American to advocate any departure from the general features of a policy that has been largely instrumental in building

up our industries and keeping Americans from the competition of the underpaid labor of Europe.

If we intend to remain honest and pay the public debt, as good people of all parties do, and if we mean to administer the functions of government, then we must raise revenue in some way or other.

With a reunited and harmonious country we shall certainly in time pay off the public debt; but the necessity of raising money for the administration of law will continue as long as human nature lasts. All parties agree that the best way for us to raise revenue is largely by the tariff; so far as we are concerned, therefore, all talk about "free trade" is folly. But the tariff question will probably be treated with justice to all of our interests and people by some such bill as Eaton's.

I believe that a commission of intelligent experts, representing both the Government and American industries, will suggest tariff measures that will relieve us of any crudities and inconsistencies existing in our present laws, and confirm to us a system which will be judicious, just, harmonious, and incidentally protective as well as stable in its effects.

I am, very truly, yours,

WINFIELD S. HANCOCK.

Hon. THEO. F. RANDOLPH, *Morristown, N. J.*

But the Lamar Democracy of Mississippi will not dare say that the protection of American industries is unconstitutional, since he admitted its constitutionality in his speech in the Senate on the tariff, February 1, 1883, and since Senator GEORGE asked for discriminations in favor of agricultural implements and manufacturing machinery; and both Senators voted for protection to jute. In fact, they swept away all constitutional objections by their construction of "the general-welfare clause" in the debate on the Blair educational bill.

It was on the power "to promote the common defense and general welfare" that Mr. Clay based his whole American system. To this Mr. Calhoun objected, and Senators LAMAR and GEORGE as well as I have changed from Calhoun to Clay on this question. They stop on the advocacy of educational welfare, and I extend it to industrial welfare also.

CALHOUN VS. JACKSON.

From these extracts it will be seen that the fathers of the country and some of the fathers of the Democratic party have believed that it was not only a constitutional right but a patriotic duty to encourage and protect home industries of every kind; and even Calhoun at one time favored protection. But the Democratic party has never been united on this question. While the Whig and the Republican parties have been home protectors a majority of Southern Democrats, following the later teachings of Calhoun, have believed that any intentional protection was robbery, while others both North and South, following Jackson, have advocated protection through a judicious discrimination in duties, but with the distinct intention of encouraging home industries.

There are, in fact, three classes of Democrats on this question at this time: incidental-protection, revenue-only, and free-trade Democrats, and each was represented in the recent canvass for Speaker; and as each candidate stated his own views distinctly in the Forty-seventh Congress, I state them in their own language:

Mr. RANDALL said:

I favor what Mr. Jefferson declared to be "discriminating duties," what General Jackson described as "a judicious tariff," and what Silas Wright designated as "incidental protection." To accomplish these ends wisely and well requires the greatest circumspection and the exercise of the most careful judgment.

Mr. CARLISLE said, in reply to Mr. KASSON:

Mr. KASSON. Let me ask the gentleman from Kentucky, then, whether he admits the policy of protection is a legitimate one in the adjustment of the tariff?

Mr. CARLISLE. If the gentleman means to ask whether I recognize a principle that would impose a duty above the revenue point merely for the purpose of giving what is called protection, my answer is in the negative.

If we were called upon now for the first time to declare a principle or inaugurate a policy upon this subject, I should not hesitate to announce my adherence to that creed which demands the largest liberty in trade, that doctrine which opens the channels of commerce in all parts of the world and invites the producer and consumer to meet on equal terms in a free market for the exchange of their commodities, for I sincerely believe that all commercial restrictions are in the end injurious to the interests of the people.

Mr. COX said:

The only difference between direct and incidental protection is that one is highway robbery while the other is burglary.

CARLISLE VS. RANDALL.

In this contest Mr. CARLISLE won, and in order to understand the full force and meaning of his election it is necessary to consider on what ground he was elected. He said in his speech on taking the chair that he was elected on an idea, and that idea therefore must have been in antagonism to the idea represented by his chief opponent [Mr. RANDALL]. The friends of each understood Mr. CARLISLE to represent the ideas of John C. Calhoun and Mr. RANDALL the ideas of Andrew Jackson. Mr. RANDALL stood on the recent platform of Ohio, which was as follows:

We favor a tariff for revenue limited to the necessities of the Government economically administered, and so adjusted in its application as to prevent unequal burdens, to encourage productive industries at home, afford a just compensation to labor, but not to create or foster monopolies.

Mr. CARLISLE stood on the doctrines thus announced by Mr. Calhoun:

All duties not laid strictly for revenue are purely protective, whether called incidental or not; and hence the distinction taken by the Senator from Arkansas, immediately on my left [Mr. Sevier], between incidental and accidental protection is not less true and philosophical than striking. The latter is the only protection compatible with the principles on which duties for revenue are laid.

These candidates for Speaker both speak of incidental protection, but when stripped of verbiage the difference between them is this:

The Carlisle idea is a tariff fixed with no intent but to produce revenue and followed by protection as a mere accident. The Randall idea is a tariff for revenue so adjusted as to protect home industries but so fixed as to appear to be incidental. That this is the line of demarkation between the incidental-protectionist and revenue-only Democrats was apparent in the Forty-seventh Congress when the democracy of every man was questioned who quoted Jackson's Coleman letter and talked about judicious discrimination inside the revenue standard, and the distinction is well taken. For if protection be robbery the Kentucky idea avoids criminality by disclaiming any felonious intent; but the Pennsylvania idea, while it denies the highway robbery, pleads guilty to what Mr. COX calls incidental burglary.

And that this is the line of distinction was more plainly manifested in the defiant declarations of those who worked for and produced the defeat of Mr. RANDALL. He was admitted to be superior in experience and equal in all other respects to any of his competitors, but for his adherence to the Jacksonian principle of discriminating duties to encourage home industries he was stricken down, and in his fall all men who believed with him on this point were notified that they had no standing in the Democratic party as thus organized. And on the morning after the Speaker's election the Washington Post said:

The Pennsylvania idea is now relegated to the Republican party where it belongs.

And a distinguished Kentucky editor had previously said:

The Democrat who is not a free-trader should go elsewhere. He should join the Republicans. The Democratic party will make a free-trade fight in 1884. * * * We spit upon compromises, and propose to neither ask nor give quarter.

And Mr. Calhoun years ago said:

No two things, Senators, are more different than duties for revenue and protection. They are as opposite as light and darkness. The one is friendly and the other hostile to the importation of the article on which they may be imposed.

Thus the difference between revenue and incidental protection Democrats is strongly marked. And that there is but slight difference between the Republicans and the incidental-protection Democrats was shown by the colloquy in the Senate between Senators EDMUNDS and VEST in the Forty-seventh Congress, when they found themselves standing on precisely the same platform, as follows:

Mr. EDMUNDS. Did you not tell us it was "for revenue only" in your platform?

Mr. VEST. Yes, "for revenue only;" that is, that no duty should be imposed alone for protection; that it should be first for revenue, and if protection followed it followed simply as an incident, not as a principle.

Mr. EDMUNDS. That is a tariff for revenue not only.

Mr. VEST. A tariff for revenue, and so adjusted as to be equitable in all its operations; no interest to be sacrificed for another, no section to be protected in the interest of another, but such discrimination to be placed inside of this limit as to build up American interests and American productions. That is the doctrine of the Democratic party.

Mr. EDMUNDS. That is the Republican platform exactly.

The difference is, the Republicans boldly proclaim a desire to protect American citizens and American industries, while these discriminating Democrats profess a willingness to acquiesce in seeing it incidentally done. One comes in boldly through the front door, and the other attempts to slip in incidentally through a back window.

THE ISSUE OF 1884.

The issue is now squarely made, and should be squarely met. The Republicans have laid down their platform, as follows:

It is the first duty of a good government to protect the rights and promote the interests of its own people. The largest diversity of industry is most productive of general prosperity, and of the comfort and independence of the people. We therefore demand that the imposition of duties on foreign imports shall be made not "for revenue only," but that in raising the requisite revenues for the Government such duties shall be so levied as to afford security for our diversified industries and protection to the rights and wages of the laborer, to the end that active and intelligent labor, as well as capital, may have its just award, and the laboring man his full share in the national prosperity. Against the so-called "economical system" of the Democratic party, which would degrade our labor to the foreign standard, we enter our earnest protest. The Democratic party has failed completely to relieve the people of the burden of unnecessary taxation by a wise reduction of the surplus.

The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus, not by the vicious and indiscriminate process of "horizontal reduction," but by such methods as will relieve the tax-payer without injuring the laborer or the great productive interests of the country. We recognize the importance of sheep husbandry in the United States, the serious depression which it is now experiencing, and the danger threatening its future prosperity; and we therefore respect the demands of the representatives of this important agricultural interest for readjustment of the duty on foreign wool, in order that such industry shall have full and adequate protection.

If the Democracy in their next convention should adopt the last Ohio platform, which is but the Republican platform of 1860, or adopt general platitudes about tariff reform, the people will not be deceived by it. The Democracy of Mississippi made a platform on railroad supervision and repudiated it in the next Legislature; and when charged with this repudiation leading Democratic papers said this clause was put in the platform as "a Delphic oracle." The Democrats may leave out the words "revenue only" and adopt Delphic oracles about "a reduction of war taxes" and "tariff reform," but no trick of language and no jugglery of words will deceive the people. They will look beyond the platform to the acts and declarations of the men who stand upon it.

The issue is already joined, and is well understood on both sides. It is not a question of particular rates of duty on particular articles, for that is a question about which protectionists may differ. It is not an issue as to whether the revenue should be reduced, for on this both parties agree; but upon what principle shall reductions be made; whether in making any reduction that may be necessary we shall consider the protection of home industries or look to "revenue only."

The issue, in short, is protection or no protection to American citizens against foreigners and American productions against foreign productions, which is a vital principle involving the industrial interests of the whole country.

THREATENED DESTRUCTION.

Those who believe that any intentional protection is robbery should stand on one side, and all, without regard to previous party affiliations, who believe in intentional protection of any kind are warned by the defiant attitude of the revenue Democrats and the impending danger to the country to stand on the other side.

The Speaker, on taking the chair, attempted to allay the apprehension of danger aroused in the public mind by his canvass and election by saying:

Sudden and radical changes in the laws and regulations affecting the commercial and industrial interests of the people ought never to be made unless imperatively demanded by some great public emergency, and in my opinion, under existing circumstances, such changes would not be favorably received by any considerable number of those who have given serious attention to the subject.

But the very promise that these changes are not to be suddenly made carries with it the admonition that "radical changes in the laws and regulations affecting the commercial and industrial interests of the people" are to be made. And the gentleman from New York [Mr. DORSHEIMER] declared the bloody purposes of his party when he said:

Let us take off one-fifth now. If that does not reduce the revenue we can take off more. Some time we will cut to the quick and draw the blood. If 20 per cent. will not reduce the revenue perhaps 50 per cent. will.

If this first cut does not bring the blood he will cut again, for the blood of our manufacturers he is determined to have.

Upon the issue thus presented I have no hesitation in saying that I am against that party which threatens the destruction of our industrial interest, whether it is to come soon or late; whether it be by the sudden plunge of the knife, reaching the heart and producing instant death, or by the gentle opening of the veins, producing slow but certain dissolution. If this were a new question there might be more room for doubt. But in view of the colossal industries that have grown up in our Union under twenty years of protection, and in view of the new and growing industries just now springing into existence under the fostering influence of the protective system, it would be suicidal to change that policy now.

WHAT IS PROTECTION?

The free-trader and revenue-only Democrats say protection is taxing one man to enable another to carry on an otherwise losing business. This definition is plausible, but not true. Protection is but granting the petition of the American laborer for leave to toil and of the American capitalist for leave to invest his money safely in building up the general welfare of a great and powerful nation.

The petitioners said to the Government, "The foreigner is making us pay too much for everything he sells to us. We may not be able to manufacture as cheaply as he can, and he will certainly endeavor to undersell and destroy us if we begin competition with him; but if you will give us adequate protection we will manufacture and sell the same goods for less than he now does."

The gentleman from Texas [Mr. WELLBORN] says the American manufacturer has failed to keep his promise. He says:

Protection was originally put upon us under a promise that we should be ultimately compensated by a home market in which we could buy our supplies cheaper than they could be procured abroad.

This is not a just statement of the case. It was not a promise to sell lower than the foreigner could, but lower than he was selling and lower than he would sell unless compelled by our competition. Now let us see how far the American manufacturer has kept his promise. There is not an article manufactured in the United States that is not cheaper to-day than it was when the protective system began. Take, for example, Bessemer steel rails. The price was $150 per ton when protection was asked. The Government fixed a protective tariff and the American began manufacturing. The Englishman, to destroy him, at once lowered his price, but through protection the American survived, and what has been the result? The price has been reduced from $150 to $40 per ton. Three million and more tons of American steel rails have been produced at an average cost of $59 per ton, and instead of paying for these rails $450,000,000 to the Englishman, to be taken from this country, we have paid $179,000,000 into the pockets of our own people, and while doing this have given employment to 20,000 American laborers at seven and a half million dollars wages annually.

It is thus the old Whigs, the Republicans, and the home protectors of all parties would grant the petition of the American laborer for work; but when he "begs a brother of the earth to give him leave to toil," the free-traders and revenue Democrats, like the "lordly fellow-worm," which Burns so touchingly describes, would—

The poor petition spurn,
Unmindful though a weeping wife
And helpless offspring mourn.

But the gentleman from Texas, Mr. WELLBORN, and the revenue-only advocates contradict themselves as to the capacity of American manufacturers when endeavoring to show that protection is an illusion, deception, and wrong. Mr. WELLBORN says:

That the prices of home products can never be thus permanently reduced below the prices of foreign products is evidenced by the most familiar of commercial phenomena.

And when endeavoring to show that protection is unnecessary he says exactly the opposite, as follows:

Nature has provided for American manufacturing resources unsurpassed by those of any other country. We have a healthful and temperate climate; food supplies can be produced nowhere else at lower cost; inexhaustible mountains of coal and iron abound here in close proximity. Nor does an ocean lie between us and the raw materials of cotton and wool. The Southern States now produce more than one-half of the entire cotton crop of the world, while Texas and other parts of the Union can grow wool in competition with the most favored countries of earth.

Add to these natural advantages the inestimable boon of free and stable government, and we have a combination of auspicious conditions in the face of which it is idle to insist that all needful manufacturing enterprises can not be profitably conducted.

Now I say protection is necessary and right whether we can or can not ultimately surpass the world in manufacturing. If through the fostering influence of protection we can ultimately manufacture cheaper than foreign nations, then protection is manifestly right. On the other hand, if we never can manufacture as cheaply as foreign nations, but under protected competition can force a cheaper market at home than we would have if left to the mercy of the foreigner alone, still protection is right. The question always is, not at what price the producer can sell, but at what price he will and must sell.

A FOREIGN MARKET DEMANDED.

If unrestrained by competition the seller will always ask the highest possible price. Now, the revenue Democrats say we must make a foreign market for our agricultural products by a removal of protective duties, but they all, like Mr. WELLBORN, differ widely among themselves as to whether we can or can not compete with the world in manufacturing if protection be taken away. Some of them say we can manufacture as cheaply as any other nation, and others that we can not, and one or the other must be wrong.

If we can manufacture as cheaply as any other nation, then a removal of protection will not give us a foreign market, because our home manufacturers will, if they can, supply us with all the goods we need. If this be true, and it be further true that the foreigners can not trade with us unless we buy from them, the removal of protection will destroy all hopes of a foreign market by building up a home market. If, on the other hand, we can not manufacture as cheaply as any other nation, then a removal of the protective duties will destroy our home manufactures, and while this would give a small increase to the foreign market for agricultural products, it will destroy the home market furnished by our manufacturers and either drive them into agriculture or out of the country. And then when our home competition is taken away we will be at the mercy of the foreigner and compelled to pay whatever price his avarice may demand. Thus, through fear of monopolists at home, we will build up monopolies abroad. The issue will then be squarely presented to the people, and we must select between a home market, always safe, and a foreign market, always uncertain and burdened with the cost of transportation. We must determine whether we will have our workshops at home or across the water. We must determine whether we will patronize our own capitalists who help us to pay taxes and build up our country, or enrich with our trade foreigners who bear none of the burdens of our Government. And finally, whether we will give work to American citizens or to the laborers of the Old World.

Now, the revenue Democrats may take either horn of this dilemma they choose. They must admit that a tariff for revenue only will give us a foreign market at the expense of destroying our home industries, or they must maintain that it will so strengthen our manufactures that they can compete successfully with the world, and thus all chances for a foreign market for our agriculture will be lost. They must stand on one position or the other, for both can not be true, and either is destructive to the arguments they make. The revenue theory, to say the least of it, is experimental, uncertain, and dangerous. The doctrine of protection, on the other hand, is tried, simple, and safe. It would protect as long as protection is necessary, and as each article becomes safe beyond peradventure it would place it on the free-list, demonstrating that the true road to ultimate free trade lies through protection. The Count De Morny, when president of the French Legislative Assembly, said, "Free trade may, it appears to me, be considered as the object toward which society is tending, but protection ought to be the means of arriving at it." The distinguished gentleman from Connecticut [Mr. EATON] well said:

There is not a single article bought in the South, from the wagon that draws the farmer's cotton to the markets to the pin his wife uses, that is not 100 per cent. cheaper than it was fifteen years ago. [Applause on the Republican side.] No matter how wrong the principle of protection may be, the fact remains the same. It has cheapened everything under God's heavens that men, women, and children use in this land—everything. And there is a reason for it. We are growing out of it. Let us grow out of it. There are sixty articles manufactured in the State of Connecticut alone that might just as well go on the free-list as to be where they are to-day. I want the people to know it.

And again he said:

England commenced her system of protection more than six hundred and fifty years ago, under one of the early Norman monarchs. She determined she would refuse to purchase the cloths that were made in Flanders, Ghent, and Bruges. What did she do? She imported the weavers of those countries and made them to belong to England. And from that time until 1844, for more than six hundred and fifty years, the system of protection was pursued by England; not methodically for the first two or three hundred years, but methodically for over four hundred years. This is the history of free-trade England.

Now England became the manufacturer of the world by necessity, by protection. And, sir, we have advanced further and nearer free trade in forty years

than she did in six hundred years. We are growing out of protection to-day. My friend from Massachusetts knows it; I know it. In very many of our productions we could stand to-day with a tariff collected directly for revenue; not that we wish to do that, or that it is best for the country; but we could.

That is truth and that is the language of a pure and unsullied patriot.

PARTY BITTERNESS.

A patriot whose devotion to a strict construction of the Constitution has made him a life-long Democrat, and rendered him a subject of suspicion at home during our unhappy civil war; and yet when he differed with the majority of his party in this debate he was made to feel the bitter sting of party venom from men who should have known him better and honored him more. But mark the contrast in the treatment of another, once a Republican but now a Democratic leader from New York, and one who came with Greeley in 1872, when the tariff question was relegated to Congressional districts. If there is one charge more than another which the confederate has always resented and indignantly denied, it is the charge that the slaveholders were the aggressors in our civil war. We have always maintained that we fought in self-defense.

Now in this debate the gentleman from Connecticut [Mr. EATON] alluded to the difference between our Constitution and that of the Confederate States, and intimated that some gentlemen present may have mistaken Washington city for Montgomery, Ala. The gentleman from New York [Mr. DORSHEIMER] charged that the slave-power, as he called the confederates, were aggressive, and met their just fate in the destruction which he prophesied would overtake the American manufacturers. Now mark the difference in the reception of the two speeches. This speech containing this most offensive of all offensive charges was applauded highly by Southern Democrats, while they turned with the fierceness of tigers on the old patriot from Connecticut who had grown gray in the service of Democracy and had epdured contumely for sympathizing with them in their most trying struggle. A most disgraceful specimen of party bitterness.

IS PROTECTION UNNECESSARY?

But it is said that we need no protection now, if we ever did; that there are some articles, like coarse cotton goods and steel cutlery, which we can make and sell to England in her own markets; and that to retain the duties on such articles is unnecessary. The answer is that we do not pull down our forts when the enemy has been repulsed, for we know not when another and more vigorous attack may be made. In the Mississippi Valley we do not tear down our levees when the floods recede, but we take that time to repair breaks and build them higher for fear another and a greater flood may come. But if these duties are unnecessary for protection they must be immaterial as barriers to importation. Unless we can buy cheaper goods from the foreigner than we can from our home manufacturers the demand for free trade is a farce; and, on the other hand, if the foreigner can undersell our home producers the charge that protection is unnecessary is false. Hence if our protective duties are unnecessary they are immaterial, and if not immaterial they are not unnecessary. The revenue Democrats say the duties on agricultural products, except rice and sugar, are immaterial, but I say let them stand; and if the time should come, as it undoubtedly may, when Mexican cotton, which grows perennially and thereby escapes the greatest labor which the planter must give in cultivating and bringing his crop to a stand, shall come into hurtful competition with our productions, I shall say give protection to cotton, as we once did, and as we now do to sugar and rice and to our manufacturing industries.

We might, possibly without injury, place more articles than we have on the free-list, for that is the theory of protection and the true method of reaching free trade, but if this should be attempted now, or if in reducing duties we should disregard all ideas of protection and look to revenue only, the fierce struggle will begin for the mastery of the trade of the world, and we may see prices cut as we see them cut in our ruinous railroad wars. The cheap wares and pauper labor of foreign countries and the accumulated industrial power and experience of centuries will combine against industries of comparative infancy, and a flood of cheap goods will come as the flood of railroad iron which destroyed our works came under the Walker tariff of 1846, and as the floods of the Mississippi River come when our levees break, and our industrial interests will be swept away. Precisely this result followed the first and only time we ever had free trade. The Revolutionary war excluded foreign manufactures and built up our own. When peace was made and there was no power in our confederation to tax or exclude foreign imports the country was deluged with cheap foreign goods and our manufactures destroyed. And this more than anything else brought about the formation of our present Government.

But Senator VANCE, in reply to Senator MORRILL, said it might be a blessing if the people once in their lives could have a flood of cheap goods. Let him learn a lesson from the region where I have seen the floods come. The floods of the Mississippi River always leave a small deposit of fertilizers on the land when they recede. But this small deposit of fertilizers is a poor consolation to the planter when he stands contemplating the destruction of property he has spent a lifetime to accumulate, and the temporary supply of cheap goods would be a mockery of compensation for the destruction of industrial interests, accumulated under twenty years of protection. Such a costly luxury could only be equaled by Charles Lamb's description of burning a house to roast a pig. The temporary supply would soon be exhausted. And when our factories had been destroyed, our men, women, and children in the North, who know nothing but factory work, would be compelled to learn new lessons, and those in the South just beginning to enjoy a new employment which takes them from the cotton-field must go back to toil under a broiling sun, while the foreigner will have the market to himself and dictate the price of all they buy and all they sell.

OUR MERCHANT MARINE.

But there is another and the strongest possible evidence of the folly of removing the barriers of protection too soon, because they seem to be unnecessary. It was in the removal of the discriminating duties in favor of articles imported in American vessels, when we supposed ourselves the equals of any nation on the ocean. The eloquent gentleman from Ohio, Mr. HURD, in impassioned tones and burning words well calculated to overthrow our reason and seduce our judgment, pointed to the decay of American shipping as the effect of a protective tariff. I meet him squarely on this issue, and assert that the destruction of American shipping is the direct result of free trade on the ocean, and but a foretaste of the destruction which free trade will bring, if now established, on our shore. He tells us:

Every ripple of the waters upon the sea-shore is an invitation to enjoy the wealth of foreign nations; and every stormy wave that beats upon the crags speaks in thundering denunciation of the policy that would lock America out of the markets of the world.

But, sir, if he would rightly understand what the wild waves are saying he would find that the sighing winds, the rippling waters, and the weary waves, lashing themselves in sad cadences upon our shores, are indeed singing a requiem over our lost American shipping. But the voice of the winds and the music of the waves tell in mournful numbers how for fifty-five years our shipping flourished when protected by discriminating duties on articles imported in American vessels and how it fell when a Democratic President was seduced into a treaty with England which established free trade on the ocean:

Under the act of January 7, 1794, there was a discrimination of 10 per cent. in tariff duties on goods imported in American vessels—that is, the tariff rates on goods imported in foreign vessels were 10 per cent. higher than if imported in American vessels. This protective clause remained in force fifty-five years, and under its operation our foreign carrying trade and our ship-building interests greatly prospered.

An act was passed in 1815 authorizing the President to waive this discrimination in favor of countries which admitted American ships into their ports on equal terms, but the law was never carried into effect until 1849, when Mr. Bancroft by direction of President Polk, concluded a commercial treaty with England, by which the ports of both countries were made free to the vessels of each. By this time England had begun to build iron ships, and the differential duty being abolished it was not long before she monopolized the greater portion of the ocean-carrying trade. We permitted England to get the start of us in building iron ships and abolished the differential duty just at the time when she was best prepared to take advantage of "free trade."

It is true that the decay of our merchant marine did not begin to show itself immediately. The strong man and the giant oak do not fall at once when attacked by disease, and so our vigorous shipping struggled on from 1849 to 1856 before the destructive effects of this free-trade treaty began to develop themselves. But from then until now it has languished. But it is ridiculous to say that the loss of our shipping arose from a want of foreign trade occasioned by a protective tariff. Statistics show that our foreign trade has not only not diminished but has most wonderfully increased. A protective tariff would operate as much against the importation of foreign goods brought in foreign vessels as it would against importations in American vessels; and this explodes the fallacy that protection on imports has cut off our shipping, and the increase of our foreign trade in foreign vessels demonstrates that this free-trade treaty and not protection was the blighting sirocco that drove the flag of our merchant marine from the ocean. This charge was as fallacious as the other charge made by the eloquent gentleman from Ohio that animosity aroused by our protective system had driven England to encourage wheat culture in India. The Southern planters remember well the extraordinary efforts of England to encourage cotton culture in India long before our period of high protection began. India is a part of the British possessions. England's queen is the Empress of India; and the gentleman might have learned a lesson in patriotism from these efforts of England to encourage and foster the production of every thing possible within her own dominions.

IS IT ROBBERY?

The free-trader thinks he has exhausted the argument when he says the tariff takes money out of one man's pocket and puts it into another's. But they forget to tell that the man out of whose pocket the money is taken is a foreigner and the man into whose pocket it goes is an American. They tell us protection is a public bounty and robbery, because it taxes one man for the benefit of another. And yet the Democratic Legislature of Mississippi, abandoning the free-trade idea of trusting to nature and individual enterprise, passed laws to exempt all new manufacturing companies in the State from taxation, some for ten and some for twenty years, and other States have done the same. This placing the manufacturer on the free-list of State taxation is a public

bounty extended to one man by increased or undue taxation of another. It is protection by discrimination in taxation. And thus the Democracy of Mississippi, who bitterly denounce as robbery the encouragement by law of the industrial interests of the nation, have given encouragement by law to the industrial interests of their State. Clay and Webster loved "the Union one and indivisible," while Mr. Calhoun idolized his State; and when we pass from the idolatry of Calhoun to the catholic worship of Clay and Webster we feel as much pride and pleasure in submitting to discriminations in taxation to protect the industrial interests of the nation as we do in protecting the industrial interests of our respective States. If it is robbery in one case it is robbery in the other, and Washington, Jefferson, and Madison were the fathers and founders of this robbery.

It is equally robbery to tax one man without children to educate the children of another or to tax the rich man to educate the children of the poor, but the blessings of general education, like the blessings of home industries, more than compensate for this apparent injustice. And the building of court-houses, custom-houses, railroads, canals, and all manner of public works may as well be called robbery because each enhances the value of private property adjacent thereto, and one man is thus benefited by taxes taken from another. Until therefore we can establish an utopia of exact justice in taxation it is idle to call such taxation robbery.

FALLACIES.

Abstractly and theoretically protection may seem wrong, just as theoretically it seems right that each man should buy where he can buy the cheapest and sell where he can get the best price. But this fallacy was exploded by Mr. Clay when he said this might be true if we all had money to buy with, but when we must barter our productions it is not always true that protection is wrong. It is not a question of how much we can buy for a penny but where we can get the penny to buy with. If a yard of cloth costs $1 in England and $1.42 here by reason of the duty added, the laborer must buy it with his labor. And if a day's labor in England is worth $1, it is worth 50 per cent. more, or $1.50 here. Thus while the Englishman gives a day's labor for a yard of cloth the American with a day's labor can give 42 cents more for the same cloth and still have 8 cents left. So there is not much robbery in that. Further, our statistics show that the rate of wages has increased 28 per cent. on an average since protection began in 1860, and that the articles which the laborer must buy have decreased in price an average of 28 per cent. in the same time. So there is not much robbery in that. If the farmer must buy with his produce, the nearer home he can find a market the better for him. Again, our statistics show that our cotton, wheat, and tobacco will buy more of everything we need to-day than they would in 1860, before protection began. In proof of which I present the following table, prepared by Mr. CHACE, of Rhode Island:

TABLES PUBLISHED IN 1882.

Let us see what the farmer's articles would buy when they went to market:

Table No. 1.

	1846.	1847.	1848.	1849.	1850.	Average.
Wheat.....bush...	$1 08.5	$1 36.5	$1 17.5	$1 24	$1 27.5	$1 22.8
Corn.....bush...	68	85.3	63.5	62.7	62.5	64.4
Oats.....bush...	39.5	49	41.4	38.7	43	42.3
Butter.....lb...	13	16	16	15	15.1	15
Kentucky tobacco.....lb...	4.7	4.8	5.3	6.1	8.2	5.82
Wool.....lb...	32.3	35.2	34.3	36.1	40	35.58
Cheese.....lb...	6.4	6.9	6.7	5	6.2	6.3
Coal.....ton...	5 72.5	5 70.5	5 39	5 59	5 73	5 63
Liverpool salt.....sack...	1 34	1 35.5	1 39	1 29	1 36.5	1 34.8
Bleached sheeting.....yd...	14.95	14.2	14.25	15	14.75	14.43
Prints.....yd...	10.91	10.17	9.17	10	10	10.05
No. 1 pig-iron.....ton...	27 87	30 25	26 50	22 75	20 87	25 65
Refined bar-iron.....ton...	91 66	86 04	79 33	67 50	59 54	76 82
Railroad iron.....ton...	.....	69 08	62 25	53 87	47 87	58 27

	1876.	1877.	1878.	1879.	1880.	Average.
Wheat.....bush...	$1 18.5	$1 60.7	$1 24.2	$1 22.3	$1 25.3	$1 30.2
Corn.....bush...	51.2	58.3	51.3	49	54.7	52.9
Oats.....bush...	36.1	42.4	32.8	38.5	43.8	38.72
Butter.....lb...	20.4	24	23.3	32.7	23	24.68
Kentucky tobacco.....lb...	9.8	9.8	7.1	8	7.7	8.48
Wool.....lb...	39.9	48.8	41.6	52	41.4	44.74
Cheese.....lb...	9.4	11.6	9.9	11.2	7.6	9.94
Coal.....ton...	4 19	3 38.7	3 54.9	2 89.8	4 08.9	3 62.3
Liverpool salt.....sack...	80.1	73.2	65	73.8	69	72.22
Bleached sheeting.....yd...	12.25	11.72	10.87	11.43	12.66	11.78
Prints.....yd...	7.18	6.67	6.1	6.31	7.5	7.95
No. 1 pig-iron.....ton...	22 25	18 87	17 62	21 50	28 50	21 75
Refined bar-iron.....ton...	52 08	45 55	44 24	51 85	60 38	50 82
Railroad iron.....ton...	41 25	35 25	33 75	41 25	49 25	40 15

Agricultural articles are 6 per cent. higher; manufactures and fuel are 30 per cent. lower; making 50 per cent. in favor of the farmer. Labor is 25 per cent. higher; what the laborer buys is 25 per cent. lower; making 66 per cent. in favor of the laborer.

Table No. 2.

	Salt.	Coal.	Bleached sheeting.	Prints.	Pig-iron.	Bar-iron.	Railroad iron.
One bushel of wheat would buy—	*Sacks.*	*Lbs.*	*Yards.*	*Yards.*	*Lbs.*	*Lbs.*	*Lbs.*
Under free trade	.91	422	8.51	12.21	107.3	35.8	47.23
Under protection	1.80	719	11.04	16.27	134.00	57.35	72.6
One bushel of corn would buy—							
Under free trade	.47	25.65	4.46	6.4	56.24	18.78	24.76
Under protection	.73	32.85	4.49	6.65	54.49	23.32	29.55
One bushel of oats would buy—							
Under free trade	.31	16.85	2.93	4.20	36.94	12.33	16.26
Under protection	.536	24.04	3.27	4.89	39.87	17.07	21.63
Ten pounds of butter would buy—							
Under free trade	1.112	59.75	10.39	14.92	131	43.74	57.69
Under protection	3.417	153.2	20.95	31.04	254	108.82	137.87
Ten pounds of cheese would buy—							
Under free trade	.474	25.09	4.36	6.28	55.02	18.37	24.23
Under protection	1.376	61.93	8.43	12.52	102.36	43.82	50.53
One pound of wool would buy—							
Under free trade	.264	14.17	2.46	3.54	31.06	10.37	13.68
Under protection	.661	29.65	4.05	6.00	49.16	21.64	21.08
Ten pounds of Kentucky tobacco would buy—							
Under free trade	.431	23.18	4.03	5.79	50.82	16.97	22.34
Under protection	1.117	52.69	7.19	10.66	88.33	37.38	47.37

Corn has been depressed in price on account of the tremendous increase of production. While the price of corn is comparatively lower than that of any agricultural product, still the farmer can produce it relatively cheaper, as all know who know anything about it, and he can land it cheaper at tide-water market.

But let me proceed with the table: Under free trade the farmer could buy with one bushel of wheat .91 of a sack of Liverpool salt; under protection it would buy 1.8 sacks. Under free trade the bushel of wheat would buy 8.51 yards of bleached sheeting; under protection 11.04 yards. Under free trade it would buy 422 pounds of coal; and under protection 719 pounds. Under free trade it would buy 12.21 yards of prints; under protection 16.27 yards. Under free trade it would buy 107.3 pounds of pig-iron; under protection 134 pounds. Under free trade 35.8 pounds of bar-iron; and under protection 57.35. Under free trade it would buy 47.23 pounds of railroad iron; under protection 72.6 pounds.

Take Kentucky tobacco, which will appeal to my friend over the way. Kentucky tobacco makes the best showing of any of the enumerated articles. Ten pounds of it under his tariff for revenue would buy .43 of a sack of salt, but under protection it would buy three times as much, and so on, as will appear by the table printed above.

IS IT MONOPOLY?

But it is said that protection creates monopolists and fosters our manufacturing monopolies already established. Webster defines monopoly to be "the sole power of vending any species of goods, obtained either by engrossing the articles in the market by purchase or by a license from the Government confirming this privilege." In Mississippi we have, what I have often denounced, an infamous lien law, which compels the laborer to trade with but one man, and creates therefore monopolies by law. But there is no law of the United States which gives any one citizen a monopoly over another. The protection offered to American industry is extended to every citizen of the United States. Like the rain and sunshine, it is equally bestowed upon all; but if, like the parable of the sower, the seed has fallen on varying soil and some upon stony places, which bring forth no fruit, it is the fault of the places and not of the sower or the law under which he acted. And I was greatly astounded when the gentleman from Texas [Mr. CULBERTSON] said that what he grouped as the manufacturing States had received more benefits from the Government under the tariff and been more prosperous than the agricultural States.

What is there in the law which prevented what he calls the agricultural States or any State from becoming manufacturing and receiving the same benefit as any other? And what has prevented the agricultural States of the South from entering upon this broad road to prosperity and sharing these benefits? I will tell the gentleman that it was the teachings of the free-trade leaders of the South. We followed their teachings. We denounced protection as unconstitutional and unjust, and refused to receive any of the benefits it offered. We saw the North grow rich under its fostering influences, while we clung to agriculture alone and have become the farm-laborers of the world. Cain slew his brother Abel because the fruit of the earth did not receive the same favor in the sight of heaven as the firstlings of the flocks, and then wandered, under the curse of God, an outcast on the face of the earth. So we of the South cursed the North for growing rich in manufacturing while we grew poor on agriculture. And still our free-trade and revenue-only leaders would have us continue in the old course of dog-in-the-manger, and, while we lick the sores of our poverty, wrap ourselves in proud defiance in the rags which free trade and secession have bequeathed to us.

This suicidal policy should be pursued no longer, and I am glad to know that it is already giving way to newer and better ideas of political economy. This cry of monopoly and this threat of the gentleman from

New York [Mr. DORSHEIMER] that the interest vested in manufactures will be destroyed by violence, as the interests of the South vested in slaves had been, is a cry of communism which finds its patron saint in him who slew his brother in jealous rage at his prosperity. There is no monopoly and there can be no monopoly when 50,000,000 of people are left free to compete with each other under the same law, and the result proves it. They talk of the rich growing richer and the poor poorer, when twenty years ago the millionaires could be counted on your fingers and now they are numberless. The poor of one generation are the rich of the next. Gould and Sage were poor boys twenty years ago, and every American should feel proud of a Government in which the poor and humble of one day are the rich and powerful of the next, instead of joining in this communistic cry against prosperity.

France, under the wisdom of the first Napoleon, adopted the protective system, and this cry of monopoly, which was raised there also, was so well answered by the distinguished Frenchman, M. Thiers, that I quote his words:

It is urged that all the protection accorded to our industry constitutes monopolies, and that to enrich a few monopolists we burden the whole country. I desire to say that this little monopoly which you accord to French industry destroys the monopoly of foreign industries. * * * We created a competition with England and a kilogram of cotton worth 14 francs fell to 3 francs. Every time you protect a national product you cause the price of the domestic product to fall and you prevent monopoly.

But when we point to the same thing here, and show that there is not a single article which we manufacture, from a railroad to a hairpin, that is not cheaper now than when protection began we are told that protection did not do it, that it was produced by a difference in machinery; and they point to the fact that the same articles are also cheaper in free-trade England. That strengthens instead of weakening our argument, because it was the competition produced by the protected industries of France, Germany, and the United States that lowered the price of the English article.

But it is said that protection is robbery, because the foreigner can manufacture and sell cheaper than our manufacturers, and that every dollar we pay above the foreign price is so much taken from the pockets of the consumers to put into the pockets of the manufacturers.

IS THE PRICE INCREASED BY EXACTLY THE DUTY?

Now, is this true? The home-protector says it is not, and this is the great issue of fact joined between the parties. In articles like coffee, which we can not produce, manifestly the price is enhanced by exactly the duty. But where we can produce any article our competition reduces prices. Protection stimulates this production, and a reduction of prices has invariably followed from competition, and hence it is claimed that a protective duty, instead of adding to, takes from the foreign price. Thus the foreign price of Bessemer steel rails was $150 per ton when a duty of $28 per ton was laid on them. But instead of going to $178, the foreign price with the duty added, they dropped on the first show of competition to $100 per ton, and have fallen to $40 per ton, and we still import them. Whether the Englishman is selling at a loss to destroy our competition, and therefore paying our duty himself, or whether he can still make a profit and pay our duty may be a question of doubt.

But the question is not at what price he could but at what price he would sell if relieved of our competition. There can be no earthly doubt but the English price would spring up if our mills were closed. This was demonstrated in iron rails under the Walker tariff of 1846. During 1849 and 1850 British manufacturers rushed in 200,000 tons of iron rails at $40 per ton until our mills were ruined and compelled to close. Then from 1850 to 1854 they sold us 800,000 tons at $75 per ton. With adequate protection our mills could have furnished the whole at $50 per ton, and $50,000,000 would have been kept at home; for want of it $64,000,000 went into the pockets of British capitalists. Senator COKE says:

The range of duties is so high, so extremely protective, that very few foreign goods are imported; so the Government receives very little revenue; but these same excessive duties are added to the price of the domestic article, and the whole of it goes into the pocket of the manufacturer, because the people are compelled to buy.

And he figures the result thus:

Revenue received by the Government	$193,800,897 67
Bounty received by manufacturers	1,250,000,000 00

If this is true of manufactures it must be equally true of agricultural products, and the result is shown in the following answer to a letter addressed by me to the distinguished Chief of our Bureau of Statistics:

Product, imports, consumption, &c., of cereals.

Cereals.	Product of crop, year 1882.	Exports of domestic products, 1883.	Domestic products remaining for consumption.	Imports entered for consumption, year ended June 30, 1883.			Duty which would have been collected on home products consumed, if imported.
				Quantities.	Rate of duty.	Duty collected.	
Wheat.....bushels...	504,185,470	147,811,316	356,374,154	*46,518 †945	20 cents per bushel..... 20 per cent.....	9,304 1,064	71,274,831
Corn.....bushels...	1,617,025,100	41,655,653	1,575,369,447	25,817	10 cents per bushel.....	2,582	157,536,945

Total.....						1,943,681	314,612,311

*Wheat, bushels. †Flour, barrels.

TREASURY DEPARTMENT, BUREAU OF STATISTICS, *January* 4, 1884.

JOSEPH NIMMO, JR., *Chief of Bureau.*

Thus we have revenue received by the Government, $1,943,681; bounty received by the bloated granger, $314,612,311.

But I am a granger myself, and this is a snake story no granger will believe. And if this argument is false as to agriculture it must be equally false as to manufactures. But that this is not true is shown by facts:

For according to the report of Mr. Wells himself in 1869, as special commissioner of the revenue, the imposition of American duties on the wools of the Cape or South Africa produced the following effects:

"Thus," as he says, "in the years 1859, 1860, and 1861, when these wools in an unwashed state were admitted free of duty, their cost at the port of export was from 18 to 19.4 cents per pound. In 1863 a duty of from 3 cents per pound to 5 per cent. ad valorem having been imposed, the price fell to 16.2 cents; in 1864, the duty having been still further increased to 6 cents per pound, the price fell in 1865 to 14.8 cents. In the first half of 1867 the price was 15.1 cents; but in the spring of this year the duty was increased to 10 cents per pound and 11 per cent. ad valorem, and for the last six months of the year the price was 13.4. In 1868 the price still further declined to 10.9."

And he quotes the report of the Boston Board of Trade, January, 1868, to the effect that "the wools have fallen abroad to an extent which nearly balances the added duty," as well as Mr. Schwartze, of London, one of the largest wool brokers in the world, to the effect that the imposition of the duties on wools by the United States Government had caused this decline in prices. (See Report Special Commissioner of Revenue, page 102.) In the above presentation of facts in regard to the duty on wools Mr. Wells surrenders the whole free foreign trade case; for he demonstrates that the duty is paid by the foreign producer and not by the American consumer.

Again this fallacy was clearly exposed by Mr. RUSSELL, of Massachusetts, in his late speech in the House. He says:

A letter by Messrs. Arnold, Constable & Co., importers, and in favor of free trade, written to Mr. HEWITT, and printed as part of the hearings before the Committee on Ways and Means, as an argument for a reduction of duties, shows as conclusively as anything I can offer the effect of American competition with foreign goods in reducing their cost to the consumer.

The letter is as follows:

[Arnold, Constable & Co., New York. Paris, 21 rue d'Hauteville. Lyon, 8 Quai St. Clair. Manchester, 41 Lower Mosley street.]

NEW YORK, *February* 20, 1884

DEAR SIR: Mr. Dalton stated before your committee that a change in cottons would prevent the manufacturers in this country from making the finer kinds of cottons, such as sateens. I send you some samples to controvert what Mr. Dalton says:

Sample A is American, 36 inches wide; cost by the case 11¼ cents per yard; the pattern is French.

Sample B is French, 32 inches wide, 4 inches narrower than the American; cost to land 18¼ cents. You will see we can no longer import the plain French cloth.

Sateens were gotten up by one of the best French manufacturers, especially for us, in the spring of 1882, when we had the market almost entirely to ourselves. In the spring of 1883 the Americans copied the cloth, and printed them very extensively, and are going on with them again this season.

In the spring of 1883 the Americans greatly undersold the French article, and our importations were sold without any profit, and in some instances at a considerable loss. We have been driven from the market; therefore the Americans need not fear the reduction which the committee proposes.

For the spring of 1884 we have imported sateens in very small quantity, but have produced some cottons of an entirely different weave, which we suppose will be copied next spring.

C sample, American sateen, 32 inches wide, the case price of which is 27 cents, at which price it is supposed to pay the manufacturer a profit, as he would not sell so early in the season without.

D sample, French sateen, 32 inches wide, cost to land 31½ cents.

Sincerely yours,

ARNOLD, CONSTABLE & CO.

Hon. A. S. HEWITT.

P. S.—The American has more weight than the French, but the finish is not quite as good.

Arnold, Constable & Co. say, "You will see we can no longer import t e plain

French cloth." Well, I don't see how they can. The American article is selling for 11¼ cents, and it costs 18½ to lay down a like article from France.

Mr. MORRISON. How much of that is duty?

Mr. RUSSELL. The duty and cost of importation may amount to fully as much as the difference between the price of the two. I do not offer this as an argument against the reduction of 20 per cent. on this particular article of manufacture to sustain its manufacture here, but offer it as an argument to show that the American manufacturers, the monopolists, and the robbers of the people's money, of which we hear so much on this floor, do not take advantage and add the duty to the domestic article as they have opportunity, but are offering to the consumer goods at 11¼ cents that it costs 18½ cents to import.

In the spring of 1882, when these French goods or sateens [samples of which were exhibited by Mr. RUSSELL] were introduced into this market, they were retailed at 75 cents per yard, yielding a profit to the foreign manufacturer and the importer of about 140 per cent. The manufacture of these goods in this country, which was begun about a year after, has brought down the price of the French goods to the consumer to 45 cents per yard, or 40 per cent. from the highest price.

If the article upon which the tariff is imposed is not manufactured here and entirely imported, then the duty is added to the cost of the article, and more than that, high commissions are added; but when the article is in part manufactured here the whole duty is not added to the cost of the domestic article. This shows conclusively that the competition here has forced the price of these articles much below the price of importation, and the fact that the duty is not wholly added to the cost of the domestic article can be illustrated or proved by almost every article manufactured in this country.

Take the article bleaching-powders, now on the free-list and not manufactured in this country, though very extensively used in several industries, there having been imported in 1883 94,395,405 pounds. The price of this article in this country in 1881-'82 was about 1 cent per pound. By a combination of the foreign manufacturers the price was carried up and is now maintained at about 2 cents per pound, or an advance of 100 per cent.

Mr. MORSE. Why not make it here?

Mr. RUSSELL. Because we have not the ingredients. It only shows that where we have not the materials, and are dependent wholly on the foreign market, we are at the mercy of foreign combinations.

But Senator COKE said:

Take the article of blankets as an example. They are universally used throughout the country. The duty on them is from 85 to 104 per cent. It is estimated that $20,000,000 worth of blankets are bought annually in this country; yet for the year 1881 official reports show that only $1,239.08 worth of blankets were imported from abroad, and the revenue of the Government on that importation amounted to only $1,089.05. The 100 per cent. duty was added to the cost of blankets made in the United States, and was pocketed by the manufacturers, the people having it to pay.

As this blanket story has been repeated on every stump let us examine into the facts.

A recent importation of blankets shows:

Cost, one pair five-pound blankets, in England	$4 45
Duty on same	4 25
Custom-house fees	65
Total	9 35

If it were true that we pay our home manufacturers the English price with the duty added we would pay $9.35 for such blankets. But in truth we buy the same quality of American blankets for $5.20, only 75 cents more than the English prices, and only 10 cents more than the simple custom-house fees added to the English price.

"This pricked the bubble theory with the needle fact," as Mr. Clay said when he gave the old farmer's answer to the stump orator who said, "These tariff monopolists make you pay 6½ cents per yard more than you ought for the shirt on your back." The farmer replied, "I suppose it must be so, but I can't quite see how, for I only paid 5½ cents a yard for it." The answer was as complete as the old father's answer to his college-educated son, who to exploit his mathematics demonstrated that two birds were three. Pointing at the two birds on the breakfast table, he said, "This is one, and that is two; and one and two make three." The father replied, "I will give your mother bird number one, I will take bird number two, and you can breakfast on bird number three." It is thus the college professors and revenue Democrats demonstrate the beauties of a revenue tariff; but if the people trust to such theories their prosperity will vanish, and their pockets will soon be as empty as the hungry stomach of the mathematical collegian.

WHAT IS FREE TRADE?

Robert J. Walker said: "Free trade is the petition of labor to employ itself everywhere in those pursuits best adapted by nature to every nation, and therefore yielding the largest products and highest wages." This petition is based on the idea that all nations form one universal brotherhood and that foreign laborers are entitled to as much consideration as our own. The home protector says all nations never were and never will be one universal brotherhood; that each nation is and should be distinct, and each should foster, encourage, and protect its own citizens and its own interests.

Hon. Ellis H. Roberts, in his recent work on Government revenue, says:

That state is nearest to the ideal standard which employs all of its energies, which builds up every one of its own resources, which adds everything possible for it to add to the sum of human wealth and power and progress.

And again:

That nation which does its own work most thoroughly, which trains its own citizens to the most complete usefulness and ripest developments, serves the whole world most effectually and adds the most to the achievements and the happiness of mankind.

The revenue-only Democrat replies that we are an agricultural people and our interest demands a foreign market; that foreign nations can not buy from us unless we buy from them, and that we can not afford to buy from them nor they to sell to us while we lay heavy duties on their productions. That all these are fallacies can be shown in a few words. That we are not and should not be called solely or even most largely an agricultural nation is shown by our productions: In 1880 our manufactures were worth $5,367,579,191; in 1880 our agricultural products were worth only $3,600,000,000.

Thus we see that seven millions of our people engaged in agriculture make less in value than three millions engaged in manufactures; and yet the revenue Democrat would wipe out our manufactures with their splendid results and drive us all into agriculture upon the dog-in-the-manger cry of monopoly, because some of our people enjoy the protection offered to all but which all can not accept.

And that the second proposition is not true is shown by the fact that we have heavy duties on all the productions of England, and yet she buys from us twice as much as we buy from her. On the other hand we import free the tea of China and the coffee of Brazil, and yet they buy four times less from us than we do from them. Senator MILLER, of New York, says:

In 1883 our dealings with the undermentioned countries were as follows:

	Imports.	Exports.
Cuba	$65,544,534	$15,103,703
Brazil	44,488,459	9,252,094
British East Indies	19,467,800	2,185,804
China	20,141,331	4,080,322
Japan	15,098,890	3,376,434
Spanish Possessions, other than Cuba and Porto Rico	10,617,563	324,474

These are only a portion of the countries from which we bought more than we sold to. From such countries we bought $358,000,000, and we sold but $141,381,000. On the other hand, our transactions with the countries from which we bought less than the amount sold to them were as follows: Imports, $365,173,000; and exports, $682,457,000.

But our Democratic friends differ again among themselves. Mr. MORRISON, the leader of the House, says:

What we want is a market; somebody to buy abroad what we can not sell at home.

Mr. MILLS says:

We send to Europe the surplus products of our farms because we can produce them cheaper here than they can be produced there. They send us in return the products of their manufactories because they can be produced there cheaper than here.

Mr. HEWITT, of New York, said in his speech of March 27:

Now, how can the farmer be benefited? What does he want? He wants to sell his productions at a higher price. And how is he going to sell his products at a higher price as the grain trade stands to-day? The markets of Europe are overcrowded with food products. To-day the farmer is met at Liverpool and London by the food products of India, and that competition, so far from being less, is going to increase. Therefore the farmer has reached the limit of the demand for his products in foreign lands. Where, then, is he to find his market for them? He must find his market at home, and how is he going to get it at home? Why, only by one method—manufactures must be fostered and grow and not be diminished.

But Mr. HEWITT is one of those Democrats who demands free raw material when he buys and wants protection on what he makes of it when he sells. There is and has been since 1794 a law giving a rebate of all but 10 per cent. of duty paid on imports when they are manufactured for export, and this shows the hollowness of the cry that our manufacturers are prevented from competing with the world in manufactured goods by reason of the high duty they must pay on imported raw material.

Again, Mr. MORRISON says:

Whatever else the tariff has or has not done, it has taxed us out of all other markets than our own; and such was the purpose of its authors.

This means, of course, that we can not export our manufactures because it costs us by reason of the tariff too much to make them. Mark how a few facts will set him down. Senator MILLER says:

We produced of manufactured goods in 1860, $1,885,861,676; in 1870, $3,385,860,354 (in gold); in 1880, $5,369,579,191. These figures indicate that we have made great progress in the direction of supplying our wants and in getting control of our home markets. Last year we imported merchandise of all kinds to the value of $723,180,914, of which less than one-half, or about $300,000,000, was manufactured goods. The remainder was raw material, such as sugar, tea, coffee, wool, raw silk, raw rubber, hemp, timber, &c. It will be seen that the value of the imports of manufactures is less than 6 per cent. of the value of the home production.

In other words, our manufacturers supply 94 per cent. of the goods consumed at home. In addition to this, we exported last year manufactured goods to the value of $112,000,000 which is a little more than 2 per cent. of the total home production. In 1860 we exported products of manufacture only to the value of $45,658,873. Last year the exportation was the largest in the history of the country. I submit that these figures show ability on the part of our manufacturers not only to occupy the home market but to reach out into the markets of the world.

Thus we see that free trade or a demand for a foreign market is founded on the false theory of universal brotherhood and sustained by the fallacious assumption that we are purely or mainly an agricultural nation, and the false charge that protection has destroyed our capacity to manufacture for export, and is therefore utterly unworthy of popular support. As communism strikes at accumulated wealth in every form, so the communistic cry of free trade strikes at the national wealth-producing power of protection.

REVENUE ONLY.

What is a tariff for revenue only? It is a tariff fixed with no intent but to produce revenue. The fundamental idea of it is that there must

be no discriminations. Every importation must bear an equal proportion of the duty. To place any article on the free-list is to discriminate, and is just as much in violation of the revenue-only principle as giving direct protection to the other articles left to pay duty, because every dime taken from the Treasury by placing any article on the free-list adds that much to the revenue to be raised on other articles and gives that much more protection to the articles taxed. The same is true if you strike off the internal revenue and leave that much more to be collected by the tariff. Mr. RANDALL understood this when he placed tea and coffee on the free-list and proposed to take the tax from whisky and tobacco. That is the true protection theory, for the protectionists would admit everything free which can not be produced in this country, and while we tax the other articles so discriminate in duties as to give most protection to the industries which need most. The revenue-only doctrine is just the reverse of this. Mr. Polk defined it thus:

The precise point in the ascending scale of duties at which it is ascertained from experience that the revenue is greatest is the maximum of duty which can be laid for the *bona fide* purpose of collecting money for the support of government. To raise the duties higher than that point and thereby diminish the amount collected is to levy them for protection merely, and not for revenue.

Mr. Walker said:

It is generally conceded that reciprocal free trade among nations would best advance the interest of all. Let our commerce be as free as our political institutions. Let us with revenue duties only open our ports to all the world. Let no duty be imposed on any article above the lowest rate which will yield the largest amount of revenue.

Mr. Calhoun said:

Revenue seeks not to exclude or diminish the amount imported; on the contrary, if that should be the result, it neither designed nor desired it. While it takes it patronizes, and patronizes that it may take more. It is the reverse in every respect with protection.

The same ideas have been repeated by the leaders of the majority of the Forty-eighth Congress, and they are utterly at variance with the Ohio Democratic platform of 1883. They are the teachings of the followers of Mr. Calhoun and that school of politicians who led us into secession. Under the leadership of a great Kentuckian, Breckinridge, the South followed to destruction, and if she now follows the great Kentuckian, CARLISLE, to revenue only she will meet with the same sad fate. Let the Union men of the old Whig party and the Douglas Democrats of the South take warning by the errors of the past.

I make no recantation of my belief then or of my action then, but I admit the failure and propose to learn wisdom from the past. The strict-construction theories which led to secession then lead to free trade now, and the last will prove as destructive as the first. The old issue between Clay and Calhoun is revived, and we who followed Calhoun to destruction should now turn and follow Clay to resurrection.

Any effort to reconcile these doctrines of revenue only with encouraging home industries or discriminations in favor of free raw material or any other import free would be a fraud, and the people would so understand it. If the revenue-only idea is to prevail let it be honestly enforced, and let every import bear its equal share of the tariff burden Tea, coffee, and quinine must come back to the duty-list and the cry for free salt be abandoned, or the cry of a tariff for revenue only becomes a transparent fraud.

Forty years ago, in the debate on the tariff law of 1833, Mr. Clay uttered prophetic words, which seem to come back to us from the grave to-day to condemn the Morrison bill and the efforts of the Democratic caucus to disturb the business interest of the country by a new tariff law before the last one has fairly gone into operation.

Mr. Clay said:

But in my opinion, sir, the sudden repeal of the tariff policy would bring ruin and destruction on the whole people of this country. There is no evil, in my opinion, equal to the consequences which would result from such a catastrophe. * * * And what is the just complaint, on the other hand, of those who support the tariff? It is that the policy of the Government is vacillating and uncertain, and that there is no stability in our legislation. Before one set of books are fairly opened it becomes necessary to close them and to open a new set. Before a law can be tested by experiment another is passed. Before the present law has gone into operation, before it is yet nine months old, passed as it was under circumstances of extraordinary deliberation, the fruit of nine months' labor, before we know anything of its experimental effects, and even before it commences its operations, we are required to repeal it.

But the prophet is ever without honor in his own land. In Kentucky, as once in Egypt, a race have grown up "who knew not Joseph," and the very sons of the immortal Clay have forgotten the teachings of their father.

CLAY CLAIMED AGAINST PROTECTION.

But the revenue followers of Calhoun are now attempting to invoke the name of Clay against protection. They tell us the protectionists of to-day demand a longer period and a rate of duty higher than Mr. Clay deemed necessary in his day. We answer that Madison and Clay both favored protection, but the changing times made necessary a rate of duty far higher to secure protection under Clay in 1828 than was necessary to secure protection under Madison in 1789. But both demanded protection for home industries, and it was the principle and not the per cent. for which they contended. If 8½ per cent. was sufficient under Madison's bill in 1789, and 40 per cent. necessary under Clay's bill in 1828, and 45 per cent. necessary under MORRILL's bill, each argued that the protection necessary must be given.

In the days of hand looms every community participated in manufacturing. But the power loom, which swept away the wonderful handwork of Hindostan and the East, destroyed the household industries here and elsewhere. And the discoveries in science, the improvements in machinery, the cheapening of transportation, and other factors are constantly changing the per cent. necessary to give protection to any one industry. Overlooking this fact, the Senator from Mississippi, Mr. LAMAR, based almost his whole argument against protection upon the fact that we had prosperous manufactures, and especially that pig-iron was exported from America to England in our colonial days until prohibited by an act of Parliament. The answer to this is so very simple and apparent that we are amazed that such an argument was ever made. Iron was then manufactured with charcoal, and the virgin forests of America gave us the same great advantage over England in the manufacture of iron that we had in ship-building while wooden vessels were used. But the use of coal in the manufacture of iron, like the use of iron in ship-building, revolutionized both these industries and gave England greatly the advantage over us.

So the difficulties of communication between the Old and New World in early days, the paucity of tonnage, and the time lost in sailing vessels were such barriers to trade that a small percentage of duty then would give as much protection as heavier duties now, when with mammoth vessels "steam communication has annihilated distance and brought nations face to face." Mr. Clay was for protection then, whatever the percentage of duty or length of necessary time to accomplish it might be, and it is unjust to his memory to insinuate he would not be equally for protection now. His predictions of the great benefits that would accrue from the adoption of the American system have proved prophetic. Yet his prophetic vision did not conceive one-half of what has been accomplished.

FOLLOW NATURE.

The gentleman from Texas, Mr. WELLBORN, said:

Whenever natural forces are left to their own action competition always allots to capital fair earnings and to labor just rewards.

And on the other hand M. Thiers, the great Frenchman, said of this let-alone policy:

It is a system of indifference, inaction, impotence, and folly.

One of the chief theories of free trade is that we should not attempt to force labor and capital into artificial channels, but we should follow nature and not attempt to change its laws. This is only true when it is manifest that we can not change nature to our ultimate advantage. We can not profitably grow oranges in Vermont or sugar in Alaska, and it would be folly to attempt it. But we can dig canals to unite waters and can irrigate where nature fails to supply water, and it should be done. Irrigation with the Nile made fertile soil of desert sands in Egypt, and artificial dikes converted Holland from a salt marsh to a land teeming with wealth. Robert J. Walker thus expressed the revenue Democrat's theory on this subject:

In the absence of tariffs the division of labor would be according to the laws of nature in each nation, and the surplus of each should thus be exchanged among the whole, each employing its labor only in the most productive pursuits, and therefore the aggregate profits would be largest.

And in illustration, he said:

We see the benefits of reciprocal free trade among the States.

If this were true it would not follow that we should not encourage manufactures because there is no law of nature to forbid our becoming the foremost manufacturing nation of the world. But the doctrine is not true and the illustration most unfortunate. The history of the South shows precisely the reverse and illustrates what a poverty-stricken agricultural nation we would have become had this theory been carried out. Nature indicated cotton as the most productive cultivation for the South. Following this theory we made cotton our king, and he flourished while slavery lasted. But when we undertook with free labor to cultivate cotton alone and exchange it with other sections for what they could produce cheaper than ourselves, we grew poorer and poorer every day until the veriest fool can now see the folly of this free-trade theory. When slavery died the interest of the South in free trade died with it.

THE GRANGER DOCTRINE.

This doctrine of the free-trader that each nation and each man should attempt to produce only that which he can produce cheapest and buy everything else from some one else is ruinous in practice. The grangers teach us, and experience sustains them, that we should diversify our pursuits and that home productions, though it may seem to cost more to produce than to buy them, are always cheapest in the end. The picture which Mr. Clay drew in his great speech on the American system of Colonel Shelby, the prosperous Kentucky farmer who made everything at home, is a true picture of what a prosperous nation should be. After many years of suffering under the free-trade theory and practice Mississippi, under the teaching of her grangers, is beginning to learn this lesson at last. The all-cotton theory is giving way to the grange theory of diversified pursuits. Twenty bushels of corn per acre is a good crop on the uplands of Mississippi, while the corn lands of the Western States can produce from fifty to seventy-five bushels per acre and we can produce cotton, which they can not.

The free-trade theory taught us that it was best for us to produce cotton, which by nature was adapted to our soil, and buy corn, which is by nature better adapted to other soils, and which can be produced more cheaply in other sections. While we followed this delusive the-

ory our corn cost us from a dollar to a dollar and a quarter per bushel, and we raised no hogs. In the last few years the planters in some portions of our State have begun to follow the example of home production pointed out by Mr. Clay, and in those sections corn sells at from 35 to 50 cents per bushel and they raise their own meat.

Under this free-trade theory we have for years labored all summer to kill the native grass in our cotton-fields and in the winter bought hay from the West. We have bought horses, mules, and cattle from the same region under the delusive theory that nature would not permit pasturage in the South because our sun was too hot for blue-grass. But a few successful examples of stock-raising on Bermuda grass which flourishes under the hottest sun, and one or two great successes in manufacturing have opened the eyes of our people to the fact that it is the sharpness of competition and not the cost of production that regulates prices. If the Mississippian would have cheap corn he must raise some himself, and not trust to the mercy of those who can raise it cheaper; and if the American would have cheap goods he must manufacture some for himself, and not trust to the mercy of those who can perhaps manufacture them cheaper. When the tariff was taken from quinine and the revenue tax reduced on tobacco and removed from proprietary medicines, the consumer saw but little difference in the price. The patent-medicine man charges as much as ever for his bottle, and the tobacco chewer pays but little less for his plug; and Hawaiian free sugar sells for 2½ cents more per pound in San Francisco than sugar in New York.

In the days of slavery the Carolinas and Georgia made rice at $2.25 per hundred pounds. When war cut off the Southern supply the foreigner put up the price to $15 per hundred. When the war was over and slavery abolished the Southerner could not make rice as cheap with free as with slave labor. The foreigner, without regard to the cost of his own production, dropped his price to $4.50 per hundred, reducing it just low enough to undersell the American producer. Hence we must either give up the rice market to the foreigner or encourage home production to control his price. To do this we must either protect the home producer by a sufficient duty on rice or we must reduce the wages of laborers to the subsistence formerly given to slaves. The home protector says make the duty protective, and the revenue Democrat says this is robbery. If the rice-planter can not make money let him quit and go into something else, and let his land adapted to rice lie idle or be cultivated in cotton and corn in competition with his neighbors. What is true of the rice lands is equally true of the sugar lands and still more true of manufactures, which in many branches can be pressed to perfection as well here as in any other country.

EFFECTS ON LABOR.

But the granger is told by the political theorist first, that the manufacturing laborer is not really protected because he is taxed an average of 42 per cent. more on all he buys than he should be; and second, they are told that the manufacturing laborer is protected while the agricultural laborer is not. Now, let us examine these positions in order. If we grant what is not true, that the duty is added to the price of the foreign article, let us see how the case stands on the admission of the Democrats themselves. Mr. HEWITT, of New York, admits that the American laborer receives 50 per cent. more wages than the English, and hence if he pays 42 per cent. more for goods he is still better off than the Englishman. We will say an article is worth $1 in England and that the tariff makes it cost $1.42 here. The laborer must buy with his labor. The Englishman labors one day and gets a dollar and he buys the article. The American labors one day and gets one dollar and a half and he buys the same article for $1.42 and he has 8 cents left. So the position is unsound. Second, they say if the manufacturing laborer is protected, the agricultural laborer is not.

Now, the most sound if not the only sound position taken by Senator LAMAR in his speech on the tariff was that it was the competition between agricultural and mechanical laborers that kept up the price of labor in this country. And if the value of agricultural labor enhances the value of mechanical labor the converse is also true. And that agricultural laborers are thus benefited is shown by the statistics of our country to be true by a comparison between different States of our Union. In the manufacturing States the farmers get the best returns for their products and best prices for their labor. Mr. Dodge, the statistician in the Department of Agriculture, who made a report on this subject, says:

Here is the result—and a striking exhibit it is, teaching the effect of varied industry, and its necessary increase of population and wealth, on the value of agricultural lands. It gives the number of States in each class, number of acres, value, and value per acre, with the average percentage of agricultural workers, as follows:

Classes.	Number.*	Acres.	Value.	Average.†	Workers.‡
First class	15	77,250,742	$2,985,641,197	$40 91	16.59
Second class	13	112,321,257	3,430,915,767	22 21	40.12
Third class	13	237,873,040	3,218,108,970	13 03	58.85
Fourth class	6	108,636,796	562,430,842	5 28	77.46

*Number of States and Territories.
†Average value per acre.
‡Percentage of workers in agriculture.

See how the value of land comes down as the proportion of agriculturists to the whole number of workers goes up. Only one man in five on the roll of employed persons in New York and Pennsylvania is an agriculturist. The value of land in New York is $44.41 per acre; in Pennsylvania the eastern counties are alive with factories, the southwestern black with coal, the northwestern flowing with oil, and this exceptional variety in industry makes the average value of land $49.30 per acre. But New Jersey, lying between New York and Philadelphia, with daily access to markets of four millions of city population, has an average value of $65.16 per acre, the highest of any State in the United States. And New York and Philadelphia are the great manufacturing centers of the country, supporting their populations by manufactures more than by commerce.

Dividing again the States and Territories into four sections, the first comprising the manufacturing and mining areas, and including all having a smaller proportion than 30 per cent. of the occupied population, the working class, engaged in agricultural employments; the second section comprising all States having more than 30 and under 50 per cent.; the third including all States having 50 and not exceeding 70 per cent., and the fourth including all States having more than 70 per cent. engaged in agriculture, we have the following perfectly natural, not to say inevitable, results, namely:

Classes.	Engaged in agriculture.	Value of products of agriculture.	Value per capita.	Workers in agriculture.
	Number.	*Dollars.*	*Dolls.*	*Per cent.*
First class	1,060,681	484,770,797	457	16.59
Second class	1,566,875	616,850,959	394	40.12
Third class	3,017,981	786,681,420	261	58.85
Fourth class	2,024,966	325,099,388	161	77.46

Here again we see the product per man go down as the percentage of agricultural workers goes up. We see that in the manufacturing States 1,060,681 agriculturists get $484,770,797 per annum for their labor, while in the agricultural States 2,024,966 receive only $325,099,388. New Jersey has but 14.92 per cent. in agriculture, and each man earns $501 while Mississippi has 81.81 per cent., the largest proportion of any State, and each person earns but $187, the lowest average in the United States.

New Jersey with the poorest has the largest returns. Mississippi makes more cotton per acre than any State in the Union. Nature has given her a soil rich in agricultural wealth, but for want of diversified pursuits she stands among the lowest in the Union in the rewards for labor. And this shows no people can prosper on agriculture alone.

The eloquent gentleman from Ohio [Mr. HURD] said:

Every dollar of increase of price which the protective tariff occasions is a day of slavery, and every hour of unnecessary labor that it requires is stolen from the invaluable time of individual responsibilities and duties.

If it be true that those who fix the price of what the laborer buys enslaves the laborer, and if it be also true, as he said, that England fixes the price of our agricultural products, then England enslaves us. But, sir, this is not true. Competitive supply and demand fix the price of labor and production. England once fixed the price of our cotton as she pleased until our home manufacturers came into competition with her and increased the demand for cotton. If the theory of the free-trade and revenue Democrat had prevailed, the cotton planters of the South, like those in India, would still be the slaves of the British manufacturing lords. But Senator MORGAN, the leading Democrat of Alabama, opposes protection upon the ground that it will increase the wages of laborers in the cotton-fields, and thus the toilers in the fields of the South, whether white or black, are enabled to see which party is their friend.

FREE SHIPS.

One of the great demands of the free-trader is for free ships, but it has been long claimed, and often proved, by John Roach, the greatest living American ship-builder, that under our navigation laws we could not compete with foreign shipping if the ship were free. And Senator VEST showed the reason for this in a recent speech in the Senate:

Mr. BAYARD. The question is very interesting. At the city of Philadelphia there was a line of steamships called the American line. It was composed of ships built and registered in the United States, and also of ships built and registered in Great Britain. Part of the ships were English ships owned and built, part of the ships were American ships owned and built; and when I say "owned" I mean they were held by the same class of stockholders in the steamboat company.

The other day when the Secretary of the Navy happened to be in Philadelphia he was congratulating them on the fact of having the only American line, and immediately one of the stockholders present rose and said that it might be a cause of congratulation but the stock was for sale and the American ships would be transferred to British register in the course of three months if some American did not buy them. The same stockholders own the vessels running from the same dock in Liverpool to the dock in Philadelphia, and they were controlled by the same interest. The pay of the captain on the British ship and the pay of the sailor on the British ship was just the same under the rule of that company as the payment of the crew on the American ship, and I have wanted to know what was the magic of a new set of papers for these two sets of vessels that was to change the cost of running them. They were owned by the same people, they traversed the same distance, they carried the same commodities, and the sailors and the officers received the same wages. Every inducement to economy was the same on one ship as it was on the other.

Now the question was, what was to be gained by the change of register? I have sought to discover that. There is no magic in a name any more than changing the name on the stern. The same hull, the same ship, the same men are there; the same dues, the same port charges are paid. What, then, was to be gained? What is there that makes the difference between the operating of an American ship and running her and operating and running a British ship? It is a question of interest to me.

Mr. VEST. The Senator from Delaware has stated the very point on which I was quoting from Mr. Griscom, with whom I formed a very pleasant acquaintance, and with whom I have had various discussions on this subject. He is superintendent of the company that runs one steamship line from Philadelphia to Liverpool, in which there are ten vessels, and one from New York to Antwerp, which is called the Red Star line, and for which he receives, as stated in this letter, ocean mail postage from the Belgian Government. The very question the Senator from Delaware has asked, I asked Mr. Griscom.

He says the difference in the expense of running is $15,000 per annum on each steamer against the American flag.

"On these four boats say $60,000 per annum, or 6 per cent. on $1,000,000 capital. If we had increased under the American flag, and had the five additional boats as now running, the wages alone against us, as compared with competitors under a foreign flag, would have amounted to $134,000 per annum on the nine steamers now running.

"A similar comparison with the Red Star boats, in which service we will have ten steamers running this month, would have been in round numbers $150,000 per annum against us if we had organized under the American flag; and inasmuch as the Belgian Government gives us $100,000 per annum for carrying the mails, you will see that we have about $250,000 per annum to tempt us to expatriate ourselves with this enterprise. In other words, if Congress should pass a bill to-morrow admitting foreign-built ships to American registry, the Red Star line could not afford to abandon the flag that now protects it.

"At this moment the Pennsylvania Railroad Company is negotiating with the Red Star line to take over and operate the Philadelphia and Liverpool service, now conducted by the American line, and if they do so several million of dollars more of American capital will be compelled to seek a foreign flag, unless Congress applies a proper remedy."

This clearly settles the question as to the difference in wages paid to foreigners and Americans, for this difference of $15,000 per annum in the running expenses of one vessel over another is due to the difference in the wages of the seamen alone. And the emphatic answer of Mr. Griscom, "If Congress should pass a bill to-morrow admitting foreign-built ships to American registry, the Red Star line could not afford to abandon the flag that now protects it," is a complete refutation of the cry for free ships. Our navigation laws compel American vessels to employ their seamen in American ports, and hence to pay American wages. A repeal of the laws which Democrats demand simply reduces the wages of our own people. Our navigation laws need amendments in some respect, and they will be made. But give us proper mail-pay for our ocean mail services, and give us protection by discriminating duties in favor of importations in American vessels, and we will not need free ships nor any laws reducing the pay of American seamen. After their great war of 1650 England's shipping was in the condition which ours is to-day. Holland was the mistress of the seas. Gentlemen talk of following the example of England, and if so let us follow her example then. She did not establish free trade in ships then, but protected her shipping by the following law:

No goods or commodities whatever of the growth, production, or manufacture of Asia, Africa, or America, including our own plantations, shall be imported into England or Ireland or any of the plantations, except in English-built ships, owned by English subjects, navigated by English commanders, and with three-fourths of the sailors Englishmen.

It was thus she built up her merchant marine, and she continued this kind of protection for two hundred years. When she bought wooden vessels from us she protected them as soon as they became English. And when she discovered that she could surpass the world in building iron vessels, she then seduced our Democratic President, Mr. Polk, into making that fatal free-trade treaty which forbids discriminating duties on articles imported in American vessels.

REDUCTION OF REVENUE.

The most popular cry of the day is for a reduction of revenue. It is said we must relieve the people from onerous taxation and take from Congress the temptations to extravagance and corruption offered by an overflowing Treasury. The revenue can not in my judgment be called excessive while we have debts to pay, and this cry comes largely from those who would perpetuate our national debt as a basis for national banks. The once proud Navy of the United States has not now a single vessel that could stand a moment before the navy of some of the most insignificant powers of the world, and yet those who cry out too much revenue are refusing to properly build up our Navy, and even refusing to furnish guns for the steel cruisers now constructing and constructed. The revenues can not be called excessive while our Navy remains thus a disgrace to the nation, while our seacoast is defenseless, our flag open to insult in any water, and our maritime cities at the mercy of a power as insignificant as Chili.

But, if our revenue must be reduced, on what principle shall it be done? Shall we discriminate for the protection of home industries or shall we look to revenue only? This is the great practical question of the hour. The Democratic majority can not get off by simply calling for a reduction of revenue; it must tell in detail how it proposes to reduce the revenue, and it is in a dilemma on this subject. In the Forty-fourth Congress the Republican tariff was denounced for producing a constantly dwindling revenue, and a Morrison bill was then introduced to increase the revenue. Now, the Republican tariff, slightly reduced in 1883, is denounced as a war tariff which collects too much revenue and a Morrison bill is again introduced, and this time it is claimed that it will reduce the revenue. That wonderful bill is like the sleight-of-hand showman's wonderful bottle from which you can pour any kind of liquor that the customer calls for.

Such palpable inconsistencies and contradictions may serve a purpose when the stump orator is attempting to excite popular prejudice against the monopolist on one hand and then on the other endeavoring to create alarm in the popular mind over the evils of an overflowing Treasury. But the sober, second thought of the people will demand that these revenue-only Democrats shall determine which of these conflicting paths they propose to pursue before they will intrust them with the reins of government. The day for this Democratic seesawing about the tariff, one wing promising to encourage home industries but not to foster monopolies, and the other wing promising to increase and reduce the revenue by the same enactments of law, has gone by. And if they adopt "a tariff for revenue only" let it be done by something more bold and manly than the moribund Morrison. This was a cowardly bill because it was acknowledged by its framers that it did not accomplish what they desired. It in effect said to its old enemy, protection, 'I hate you and would like to cut off your head if I dared to, but I fear the people may hang me if I kill you, so I will simply maim you by cutting off 20 per cent. of your legs."

DEMOCRATIC VACILLATION.

But these are not their only vacillations. Walker's definition of free trade is precisely what the revenue Democrat now tells us is the doctrine of a tariff for revenue only. When Walker first proclaimed this definition, the watchwords of the Southern Democrats were "free trade and sailors' rights." But now when they are called free-traders they deny it and blaspheme about it as bitterly as Peter did when he denied his Lord. They tell us they are not for free trade, because they are for the collection of revenue by a tariff and this will prevent absolute free trade. And while the revenue wing of the party thus flinch and dodge when called free-traders, the other wing attempt to hide their heads under the sand of monopoly when they are called protectionists. They tell us in their Ohio platform—

We favor a tariff for revenue limited to the necessities of the Government economically administered, and so adjusted in its application as to prevent unequal burdens, encourage productive industries at home, and afford just compensation to labor, but not to create or foster monopolies.

Compare that with the following resolution, which was a part of the platform on which Andrew Jackson was elected, and it will be found similar in principle:

Resolved, That an adequate protection to American industries is indispensable to the prosperity of the country, and that an abandonment of that policy at this period would be attended with serious consequences to the nation.

Compare it with the Democratic platform on which Seymour and Blair were nominated, and it seems to have been good Democratic doctrine then:

1868.

The Democratic convention of 1868 demanded—

6. * * * A tariff for revenue upon foreign imports and such equal taxation under the internal-revenue laws as will afford incidental protection to domestic manufactures, and as will, without impairing the revenue, impose the least burden upon and best promote and encourage the great industrial interests of the country.

Compare it then with the Republican platforms and they seem to be identical:

REPUBLICAN PLATFORMS.

1860.

That, while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imposts as to encourage the development of the industrial interests of the whole country, and we commend that policy of national exchanges which secures to the workingmen liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the nation commercial prosperity and independence.

1872.

Revenue, except so much as may be derived from a tax upon tobacco and liquors, should be raised by duties upon importations, the details of which should be so adjusted as to aid in securing remunerative wages to labor, and promote the industries, prosperity, and growth of the whole country.

1876.

The revenue necessary for current expenditures and the obligations of the public debt must be largely derived from duties upon importations, which, so far as possible, should be adjusted to promote the interests of American labor and advance the prosperity of the whole country.

1880.

We reaffirm the belief avowed in 1876 that the duties levied for the purpose of revenue should so discriminate as to favor American labor.

This Ohio platform honestly construed is a protection platform, and protection not accidentally but intentionally given by discrimination in duties. And to protest that it means merely such accidental protection as may be given or may arise from a tariff for revenue only is a fraud and an effort to convert it into a Delphic oracle. If it does not mean intentional protection, it is the merest humbuggery. The saving clause "not to create or foster monopolies" partakes of demagogy in this: So long as new establishments are springing up in manufactures already begun and flourishing in this country, the protection necessary to foster the beginners must necessarily protect those already prosperous, and to pretend to favor a law that will foster one and not the other is ridiculous. The people do not favor class legislation and do not believe in the jugglery whereby the same law can be made to foster one man and not protect another engaged in the same business. But if it means protection, as I believe it does, let it be boldly proclaimed. If they strike out the word "only," before or after the word "revenue," they may as well come out squarely and say: "On the tariff question resolved that we sneak." This dodging will deceive no one, while it implies a doubt or a dalliance in Democratic faith which has already provoked the wrath and damnation of Kentucky statesmen.

The Greenback convention treated the tariff as a subordinate question, but their candidates for President and Vice-President are both for protection. Their candidate for President laid down his platform before his nomination, and the acceptance of him indorses his platform, which is as follows, and is as near right as it can well be made. In a

letter to C. M. Hubbard, General Butler thus lays down what I believe to be the true rule of tariff legislation:

Therefore I favor the raising of a sufficient amount of revenue from the economical administration of the Government and from duties upon imports, and in laying those duties to tax articles of luxury up to the collection point, to make free all raw materials not raised or produced in this country which enter into its arts or manufacture, all the necessaries of life, and as much as possible and to cheapen them in every way possible, and within those limits to so judiciously place our duties as to best encourage and aid American labor and American industries.

REPUBLICAN POLICY.

The Republican party, on the other hand, presents a different and unchanging policy of protection. They are for building up the industrial interests of the country, and to this end would place protective duties on all articles which we can produce, and maintain that protection as long as it is necessary. At the same time they would admit free every thing that we can not produce except luxuries. Under the Walker tariff in 1848 less that one-eighth of the goods imported were duty free, and under the Morrill tariff in 1882 nearly one-half were free. The exact figures were $210,579,007 worth of goods admitted free, while $514,060,567 paid duty. And as each article we produce ceases to need protection it should be placed on the free-list, and we can thus steadily advance to legitimate and safe trade and to a proper reduction of revenue. The Morrison bill, while it would have destroyed our industries, would have increased importation and increased the revenue. Protection keeps out foreign goods, and tends to reduce revenue, while it trusts to internal competition to reduce prices.

SUGAR DUTY AND INTERNAL TAXATION.

If further reduction of revenue be needed before our industries should be hazarded, we should abolish the internal-revenue system, which has always been odious to a free people. And I here present as part of my remarks a letter of Hon. W. D. KELLEY on the subject. While I do not believe the time has come for any large reduction of our revenue, it will soon come, and then I shall favor an abolition or transfer to the States of the internal-revenue fund before we tamper with the duties that protect American industries:

I regard agriculture as the primary industry, upon the diversification and prosperity of which all other industries depend; and since I became a student of national economy I have watched with interest every experiment which promised a wider diversification of the productions of our fields, or to promote the conversion of those products in the closest proximity to the farms on which they were produced. This is the true policy of the nation.

But the British Cobden Club and its American disciples, known as "free-traders," "revenue reformers," and friends of a "tariff for revenue only," propose to put sugar on the free-list while retaining a tax of 90 cents a peck on corn when distilled into alcohol for use in the arts and sciences. If the efforts of these interested Englishmen and fanatical Americans to prevent the diversification of our agricultural productions shall be successfully baffled, we shall in a few years produce all the sugar and molasses the people of the country will require, and pay to our farmers and home manufacturers of sugar more than $100,000,000 which we now pay to foreigners for those essential commodities.

The slave labor of Cuba, almost the entire exports of which island we purchase, produces 500,000 tons of cane sugar per annum. The free though ill-paid labor of Western Europe produces 3,000,000 tons, or six times as much sugar from beets. The people of Europe are not more intelligent nor enterprising than those of the United States, nor more capable of extracting from their agricultural productions the best results they will yield. But I do not now propose to discuss the question of beet-root sugar.

Farmers in every section of our country can produce sugar-yielding crops to which European farmers are strangers; and it may safely be predicted that, if not prevented by unwise tariff legislation, they will do this and supply the home market with sugar and molasses. In asserting that we can produce all the sugar the American people will consume I am not indulging in the expression of theoretic possibilities but dealing with ascertained facts. The profitable production in commercial quantities of superior sugar and sirup from sorghum and Indian corn has passed beyond the domain of experiment. It is an often demonstrated fact.

If, however, our farmers and the country at large are to enjoy the benefits of this happy consummation, the duties which now protect the American sugar-grower must not be repealed nor reduced.

To perfect these industries, to create local markets for corn and sorghum in convenient localities for farmers who may devote their land to these crops, much capital must be invested in the establishment of mills and refineries. Under existing duties our sugar trade may be revolutionized and our agricultural productions widely diversified to the great advantage of the farmers and planters of every section of the country.

The beet-sugar industry, now so profitable to Europe, is a creation of the protective system. To promote its development Bonaparte offered enormous premiums to farmers who should produce the most beets to the acre, and like premiums to the chemist who should extract the most sugar from a given weight of beets. France, Germany, and Austria now derive immense revenues from beet sugar; and England imports it largely from each of these countries; yet in the face of an agricultural development, which if not interfered with will shortly equal that of beet sugar in Europe, the friends of a tariff for revenue only talk of putting sugar on the free-list; and by the mere announcement of this purpose are frightening capitalists into withholding the means of promoting this great interest.

I learn from agricultural papers published in Iowa and other Northwestern States that sorghum is one of the most profitable crops that can be grown; that its seeds have been found to be nutritious food for horned cattle and horses; that its leaves equal those of corn in value for fodder, and that the residuum, known as bagasse, after the extraction of the sirup from the stock, is of much value in the manufacture of paper.

But the sugar-cane of Louisiana and other Southern States and sorghum are not our only sources of sugar supply. The manufacture of sugar and sirup from corn is found to be profitable. How largely, indeed, our corn crop may be applied to the production of sugar is shown by the following extract from your paper of December 22, which I beg you to permit me to insert:

"The following interesting statistics of the manufacture of corn sugar show the amount of capital invested, wages paid, material consumed, and the number of laborers employed in, and the products of the industry for the year 1882:

Total number of glucose establishments	21
Capital invested	$6,500,000
Number of laborers employed	3,000
Number of bushels of corn consumed annually	19,500,000
Value of other material used	$1,000,000
Total wages paid	$1,300,000
Total production of sugar in pounds	67,200,000
Total production of molasses in gallons	32,900,000

"There can be but one effect, so far as the farmer is concerned, and that is to reduce the price of corn. To destroy an industry which consumes 19,500,000 bushels of corn would certainly affect the market, and not only reduce the price of corn but also the wages of the farm laborers. Allowing 40 bushels of corn to the acre, it requires 487,500 acres of land to produce the amount of corn required for the 21 glucose works. Allowing 1 laborer for each 20 acres of corn, it requires 24,375 laborers to cultivate the same. Allowing 400 bushels of shelled corn to each freight car, it would require 48,750 cars to transport the corn necessary for this one industry from the place of production to that of consumption. Besides, there are mechanics, coal miners, machinists, and manufacturers too numerous to mention, whose products are required in this one industry. It is wonderful to what an extent any successful manufacturing establishment ramifies, reaches out, and intermarries with other trades and occupations. As it is with this one, so it is with all others. No one industry of the country can be injured by unwise legislation without affecting numerous others, and the farmer in the end is the one who suffers."

Notwithstanding its giant proportions, no one will deny that the corn and sorghum interests are infant industries; yet the repeal or material reduction of the existing duties on sugar and molasses would not only check their growth but operate disastrously on the capital invested and the labor employed in both these young industries.

Why, and by whom, is this combined assault upon the sugar-growers of the country proposed? The combination against that interest, and, as I shall show, against other departments of agricultural industry, is a remarkable one, and is formidable by reason of its incongruous elements. It embraces the large distillers and owners of bonded warehouses for whisky, with whom are united extreme temperance men, who believe that human appetites can be restrained by taxation. With these are free-traders, who are ready to take advantage of any combination which will enable them to destroy our industries in detail, and the more than 4,000 political agents of the Government, who, in the service of the Internal Revenue Bureau, are to be found in every Congressional district in every State and Territory of the country, and whose maintenance costs the people more than $5,000,000 a year. Why are these incongruous parties drawn into combination? What has the distiller and storehouse keeper to do with the sugar interest? Why should temperance men propose to destroy the capital invested in the sugar industry, and to subordinate the freedmen of the Gulf States to the interests of the owners of the slaves of Cuba? Let us see if we can account for this unnatural combination.

We have an enormous surplus revenue. It is probably this year $125,000,000. It is derived from internal taxes. Such taxes have been imposed three times in the history of our country, always as war taxes. The first time they were permitted to continue for nine years, and the second time for four years. They have now endured for over twenty years, and should be abolished. This action would relieve us of the surplus revenue, which is now provocative of extravagance and corruption.

But say free-traders, "No, we will reduce the duties on foreign imports and retain these internal taxes." "Yes," responds the heedless temperance man, "give us free sugar and tax barley, hops, corn, rye, and tobacco." That is, they propose to tax the manufactured results of these agricultural products. The existing tax on spirits weighs on the corn-grower just 90 cents a peck. "Yes, retain these taxes," says the rich distiller and owner of bonded warehouses. "These taxes give us a monopoly and extraordinary profits." There is not within my knowledge a wealthy distiller or owner of bonded warehouses in the country that does not unite with the unwise temperance fanatics in demanding the retention of the tax on spirits.

The mistake of the moralists in this matter is demonstrated by the experience of Great Britain. No government taxes intoxicants as does that of the British islands, and nowhere in all Christendom does the vice of intemperance prevail so almost universally as in England and Scotland. The truth is, inordinate taxation of intoxicants operates as a premium on adulteration, the effects of which are the creation of unnatural appetites for what are sold as legitimate distillations.

Let me briefly consider the effect of these taxes upon our corn-growers. One bushel of corn, I am told, will, in ordinary years, carry another from average points of railroad shipment in Kansas to Chicago. Thus the Kansas farmer parts with two bushels of corn in order to get the market price at Chicago for one. When this operation has been effected the corn-grower has no further interest in the corn thus sold. But if corn be converted into alcohol, one bushel will carry at least five, not only to Chicago but to Liverpool or Havre; and if the alcohol be further advanced into alcoholic drugs, chloroform, collodion, ether, or into alcoholic perfumery, one bushel will carry from ten to twenty to the markets of the world. Here is a means by which farmers may evade much of the cost of transportation of which they complain so loudly. But this is not the only advantage they would derive from the conversion of their crop upon or in the immediate vicinity of their farms. The extraction of the alcohol does not consume the corn. After the farmer has sold his alcohol he will still retain an interest in his corn as food for swine and cattle, and, through this use of it, as a fertilizer for the fields from which his crops are taken.

I believe in regulating and endeavoring, by wise provisions of law, to restrain the use of intoxicating beverages. This the United States Government can not do. It does not attempt to do it. It does but impose taxes which fall heavily upon the farmer, and help to add to the wealth of the distiller. States can regulate, can license, or can prohibit the trade in alcoholic liquors; and to States, and through them to municipal governments, I would remit this whole subject. But by imposing taxes as we now do we not only restrict the market for the farmer's crops, but add to the cost of many of the things he consumes.

Alcohol enters into almost all the arts. Let your readers ask any druggist what percentage of the fluids on his shelves or in his stock are alcoholic; and if he speaks the truth he will tell them that more than nine-tenths contain alcohol. Is that farmer's home well furnished in which there may not be found a camphor or an arnica bottle? The good wives who keep these remedies at hand are probably not aware that their cost is enhanced three, four, or five hundred per cent. by the tax the Government imposes on a considerable percentage of the corn their husbands grow.

In conclusion permit me to say that the American people should, in a few years, supply themselves with sugar and molasses; that they should not only supply themselves with but enter the markets of the world in furnishing alcoholic drugs and perfumery; and that we will do this if the Cobden Club and its American disciples will permit us to repeal the internal taxes and raise our revenue by adequate duties on the productions of highly-diversified agriculture and manufactures.

OUR GREAT PROSPERITY.

It is a pleasing task to turn from these Democratic vacillations to the contemplation of the wonderful development of our country under twenty years of the fostering influence of the system of protection which Jefferson and Madison inaugurated, which Jackson favored, which Clay and the Whig party more fully developed, and which the Republican party under the necessities of war adopted and carried out. Senator COKE, who made a powerful, if not the most powerful, argument against protection in the Forty-seventh Congress, quoted a letter from Robert J. Walker and a lecture of Professor Sumner to show that the low-tariff period, from 1846 to 1861, was our golden age of prosperity. But when he turned from this to show that we needed no further protection, he introduced a witness who says that our prosperity under the so-called robber tariff not only surpasses all our previous history but stands unrivaled in the history of the world. He says:

I call to the stand an impartial witness in the London Times. Let that speak of the present status of this Republic among the nations of the earth:

"AMERICA'S MAGNIFICENT PROGRESS.

"The details we publish this morning of the principal facts elicited by last year's census of the United States confirm the impression the original summary of results produce. A nation has never exhibited a more magnificent picture of material progress for ten years. Since 1870 more than eleven and a half millions have been added to the population, at a rate of 30 per cent. increase. Except China and Great Britain and Russia, no government can count more subjects. In the number of citizens moved by similar impulses, and recognizing common ends, the British Empire itself yields to the great Republic. Fifty millions of human beings in a land like America more than match the 86,000,000 of European and Asiatic Russia. The 425,000,000 of China are not to be compared with them as a force among mankind. The growth of a population may generally be understood to imply the growth of wealth and resources. As each census in a European state denotes a numerical advance, it may for the most part be inferred that fresh means of support have been made available. When, however, every successive census in the United States reveals an expansion by bounds and leaps, faith in the instinct of human nature not to multiply beyond the power of existence is scarcely needed to reassure anxiety. The granary which is to feed the new millions which have come, the millions which are to follow, piles its stores for the whole world to certify them. Each added American citizen has not to search for the livelihood nature hides somewhere or other for all its children. He is born or imported with his inheritance labeled and allotted. He has but to go West, or North, or South; there it is awaiting his advent.

"European populations, even the home population of Great Britain, it must be acknowledged, have rather in their decennial polls a look of boys growing out of their clothes. An elbow or an ankle is sure to be seen betraying a want of proportion between past resources and present demands. On the other side of the Atlantic there is a magazine of clothes warranted to fit all ages and sizes. Good soil is crying out everywhere for its owners to come and possess it. They have not to conquer and annex. Though the domain be lying desolate, or be a hunting-ground for Indians, it confesses itself their own, for them to enter it and enjoy it as soon as they please, the sooner the better. How fresh thousands and hundreds of thousands of acres are continually being brought under tillage, Europe requires no census ordered from Washington to tell. The West and the Northwest are a home farm for the older hemisphere; the laborers on this side of the Atlantic hear the echo of each mile of territory broken up by the plow on that. The census shows that the growth is universal and not partial. The census itself hardly does justice to the energy with which the South is keeping pace with the rest. The rate in one class of industry approximates to that in another. As the farmers of Minnesota have multiplied from 439,706 in 1870 to 780,707 in 1880, the commercial and mining population of Pennsylvania has risen from 3,521,951 to 4,282,738."

The palm of superiority over all the nations of the earth in all the elements of power and greatness is gracefully yielded to the United States. To show clearly that manufacturing development has kept pace with our marvelous and unprecedented agricultural growth, so graphically delineated, I read from the last report of the Chief of the Bureau of Statistics on our foreign commerce:

"The value of the products of agriculture exported from the United States during the years 1830, 1840, 1850, 1860, 1870, and 1881, respectively, showed a fluctuation of only about 3 per cent. of the total value of exports of domestic merchandise. This indicates that the growth of the exportation of commodities other than products of agriculture—chiefly products of manufacture—kept pace with the astonishing growth of the exportation of the products of agriculture."

Can it be possible that such splendid achievements could have been accomplished under a destructive robber tariff? And in the face of such unparalleled success how ridiculous do the charges of the Democratic platform of 1876 appear when it says:

We denounce the present tariff levied upon nearly 4,000 articles as a masterpiece of injustice, inequality, and false pretenses. It yields a dwindling, not a yearly rising, revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad, and depleted the returns of American agriculture, an industry followed by half our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.

The largest revenue ever raised under the tariff of 1846 was $64,224,190.27, and the smallest raised under the Morrill tariff was $130,170,689.26. It is true that the revenues dwindled under the financial pressure of the resumption period, but the revenue increased as soon as the effort to destroy greenbacks was stopped, and they have continued to increase ever since. But now when it yields a rising and not a yearly dwindling revenue it is denounced for producing too much. In 1882 the revenue was $220,410,730.25 from the same tariff.

RESULTS AFTER TWENTY YEARS OF PROTECTION.

In addition to this glowing statement of our prosperity from an English source, we submit the following figures, which speak louder than words:

Table showing the growth of the nation under protection since 1860 *in population, wealth, industries, and commerce.*

Subjects.	1860.	1880.	Increase, per cent.
Population of the United States	31,443,321	50,155,783	60
Value of farms	$3,271,575,426	$10,197,161,905	212
Wheat produced, bushels	173,104,924	498,549,868	188
Wheat exported, bushels	4,155,153	153,869,935	3,603
Corn produced, bushels	838,792,742	1,717,434,543	105
Corn exported, bushels	3,314,305	98,169,877	2,862
Wool produced, pounds	60,264,913	232,500,000	286
Cotton produced, bales	4,826,086	6,643,269	65
Oats produced, bushels	172,643,185	407,858,999	136
Barley produced, bushels	15,825,898	44,113,495	179
Butter exported, pounds	7,651,224	39,236,658	413
Cheese exported, pounds	15,524,830	127,555,907	722
Petroleum produced, barrels	251,000	22,382,509	8,817
Pig-iron produced, net tons	919,770	4,295,414	367
Iron rails produced, net tons	205,038	1,461,837	613
Hogs packed, number	2,350,822	6,950,451	196
Merchandise imported	$353,616,119	$667,954,746	89
Merchandise exported	$333,576,067	$835,638,658	150
Gold and silver produced	$46,150,000	$75,200,000	63
Gold and silver exported	$66,546,239	$17,142,919	.....
Gold and silver imported	$8,550,135	$93,034,310	988
Railroads, miles	30,635	104,813	188
Bessemer steel rails, number	None.	1,187,770	.....

The Times-Democrat, of New Orleans, enables me to show the grand increment of wealth and progress of these States since the census of 1880, as taken from the official records of this country. It shows that the progress of the last four years was greater than the preceding ten, and in that brief space $640,000,000 was added to the wealth of the South, or an increase of $160,000,000 a year. The cotton crop had increased from 5,750,000 to nearly 7,000,000, and the railroad mileage from 17,000 to 26,000, and, while I will not give the particulars and figures, "the marvelous progress was varied in character and general through the South."

In 1870 not a ton of coal was mined in Georgia; in 1880 the census reports 154,000 tons. In Alabama, 11,000 in 1870, and in 1880, 322,000 tons; and for the States of Alabama, Georgia, Arkansas, Kentucky, Tennessee, and West Virginia the coal output rose from 900,000 tons to 3,700,000 tons. There were in 1870 but 40,000 tons of iron ore mined in Alabama, Georgia, Tennessee, Virginia, and West Virginia, and in 1880 there were 575,000, an increase of more than 1,200 per cent. Great as the gains were, there is every reason to believe they have been far exceeded in the four years that have elapsed since the census was taken, and still greater progress may be expected in the future.

And the Boston Journal says:

In 1860 the tariff of the country was for revenue only. In 1861 the policy was changed so that the tariff should give incidental protection. From 1860 to 1880 the population of the country increased 59 per cent., of which 14.5 per cent. was by immigration. During the same period the number of farms in the United States increased 95.4 per cent., the value of crops 127 per cent., the number of bushels of grain 116 per cent., the value of the products of manufactures 108.2 per cent., the number of persons employed in manufactures 108.9 per cent., the amount of money paid as wages in manufactures 147.5 per cent. In 1860 the wealth of the United States was estimated at $19,380,000,000, in 1880 at $47,425,000,000, an increase of 138.9 per cent. In 1860 the wealth of Great Britain exceeded that of the United States by the sum of $8,470,000,000, but in 1880 the wealth of the United States exceeded that of Great Britain by $3,875,000,000. In 1860 there were 30,792 miles of railroad open in the United States, representing $1,195,000,000 of capital; in 1882 the number of miles of railway open was 104,810, representing a capital of $5,950,000,000, an increase in the mileage of over 243 per cent.

These statistics might be extended indefinitely, but the above show that the growth of the country and its industries have been phenomenal during the era of protection.

Let us compare the statistics of our foreign trade during the years 1858, 1859, and 1860, years after the tariff reduction of 1857—the lowest that it ever was—with the years 1881, 1882, and 1883. The aggregate value of the exports of merchandise during the first period of three years was $845,985,000, or at the rate of $9.40 per annum to each inhabitant of the United States. The total imports of merchandise during the same period were valued at $948,228,000, or at the rate of $10.54 per annum to each inhabitant. During the latter period the exports of the United States were valued at $2,421,388,000, or at the rate of $15.53 per annum to each inhabitant. During the same period the value of the imports of merchandise was $2,090,433,000, or at the rate of $13.40 per annum for each inhabitant. These figures show an increase per capita of the exports and imports of merchandise—that is, the foreign trade—under the era of protection, of 44.9 per cent. Thus it seems that the declaration of the Free Trade League, like other assumptions of free-trade doctrinaires, will not stand the test of facts, and is therefore false.

THREE FACTORS OF WEALTH.

But the revenue Democrats tell us this prosperity did not come from protection. If not, then whence did it come? There are three factors of wealth now in existence which were not in existence in 1860.

The first is the encouragement given to manufactures by the Morrill tariff. The second is the encouragement given to agriculture and mining by opening up the public domain with railroads, thus giving a hundred-fold force to the encouragement offered by our homestead and mining laws whereby we invited the whole world to come in and help to make us rich by the development of our agricultural and mineral resources. And, third, a stable paper currency composed mainly of

greenbacks, the best paper money ever invented. As to which of these three has been most potent in bringing about this period of unrivaled prosperity it may be difficult to determine, because each has contributed greatly to that result.

But it is a source of pride to the Greenbacker to know that when the Government attempted to depreciate and partially destroy the greenback a panic came which drove national banks into suspension and produced a period of financial distress from 1873 to 1879 which neither the encouragement given to manufactures nor the encouragement to mining and agriculture could allay, though both continued in full force. And it is a still greater source of pride to remember that when the destruction of greenbacks was stopped and they were made receivable for custom duties prosperity was at once restored and the troubled waters of our financial sea became at once as calm as the tempest-tossed sea of Gallilee when the Master said "peace, be still."

But I pass now to the consideration of the question,

IS THE SOUTH PROSPEROUS?

The gentleman from Alabama [Mr. HERBERT], in a speech made in the Forty-seventh Congress, said the South is not prosperous, and to show that the tariff was the cause of this want of prosperity he published an interesting table, which I reproduce for another purpose. He said:

Why is it, Mr. Chairman, that labor at the South is so cheap? Why is it that the colored man who works in the field for money wages can get only $10 or $12 a month? It is not because of any combination against him. Planters bid against each other as much as they can afford to pay. Lands which in 1860 were worth $40 an acre can be bought to-day for $10 an acre. Why is this?

I admit fully the distress and depression that followed the war, but why have we not recovered? I want to state facts that will show why, facts that will demonstrate that the high prices a high tariff has compelled us to pay have kept the South poor. Our principal industry before the war was cotton. Now it is the same.

The table is as follows:

Cotton year ended August 31—	Production.	Average net weight of bale.	Gross weight.	Annual average price.	Gold value of crop.
	Bales.	*Pounds.*	*Pounds.*	*Cents.*	*Dollars.*
1855-'56	3,645,345	420	1,622,907,594	10.30	167,159,482
1856-'57	3,056,519	444	1,438,520,102	13.51	194,344,066
1857-'58	3,238,962	442	1,517,518,476	12.23	185,592,510
1858-'59	3,994,481	447	1,892,664,987	12.08	228,633,930
1859-'60	4,823,770	445	2,275,372,309	11.00	250,290,954
1860-'61	3,826,086	477	1,934,545,603	13.01	251,468,383
1861-'62					
1862-'63					
1863-'64					
1864-'65					
1865-'66	2,228,987	441	1,041,962,263	30.76	320,507,592
1866-'67	2,059,271	444	969,175,303	22.40	217,095,268
1867-'68	2,498,895	443	1,173,431,114	17.77	208,518,709
1868-'69	2,439,039	437	1,129,811,645	21.09	238,277,276
1869-'70	3,154,946	434	1,451,401,357	19.45	282,297,564
1870-'71	4,352,317	438	2,020,693,736	15.03	303,710,269
1871-'72	2,974,351	439	1,384,084,494	18.31	253,425,871
1872-'73	3,930,508	440	1,833,188,931	15.84	290,377,127
1873-'74	4,170,388	439	1,940,648,352	15.18	294,590,420
1874-'75	3,832,991	439	1,783,644,032	13.32	237,581,385
1875-'76	4,669,288	436	2,157,958,142	11.41	246,223,024
1876-'77	4,485,423	438	2,082,492,190	10.87	226,366,901
1877-'78	4,811,265	450	2,294,973,405	11.00	252,447,075
1878-'79	5,073,531	443	2,382,428,687	10.83	258,017,027
1879-'80	5,761,252	453	2,771,797,156	12.02	333,170,018
1880-'81	6,605,750	456	3,197,183,000	11.24	359,363,369

Over four billions three hundred millions paid to the South for cotton since the close of the war! If we compare the six years preceding the war with the six years preceding this we find that, according to this table, the South received $397,882,089 more in the six years ending in August, 1881, than for the six years preceding the war. If we make allowance for the difference in Southern and New York prices and for the grade of low middling, which is above average, the sum can not be below $330,000,000 for these six years. In other words, the South has received on an average $55,000,000 in gold every year for the last six years more than for the six years before the war. I repeat the question, Where has all this money gone? The answer to this question is simple and it is an answer to the whole theory of free trade. This money went to purchase meat, bread, hay, corn, horses, mules, cattle, and everything which should have been raised at home. But under the free-trade theory it was said to be better to raise cotton which was adapted to the soil of Alabama, and buy those articles which could be produced cheaper elsewhere. It has been wasted in following the delusive theory of free trade.

It is true that the South has not been as prosperous as she should be since reconstruction, and that she has much to learn before she can be. But that she is beginning to learn these lessons I have said, and the witty editor of the Louisville Courier-Journal bears evidence for me as follows. He says, speaking of Southern improvement:

The idlers have climbed down from their seats on the fences; the frill has been relegated from the shirt-front to the pantalette; the gold-headed cane has been beaten into a paper weight for bank checks; and it is not the thing now to fit yourself into a potato barrel at the corner grocery and spit tobacco juice at a crack for drinks.

It is to be hoped that this reform will soon reach Alabama, if it has not already done so.

But in truth the making of cotton alone never was profitable. In the days of slavery the most successful planter raised food crops and everything possible to be made at home, and cotton was his surplus. And even then the chief profit of the cotton-planter was in the increase of his slaves, the clearing up of new land, and the improvement of his place. And now the farmers most prosperous in the South are those who diversify their crops, use labor-saving implements, raise their mules, horses, cattle, and hogs, and work themselves. Those who have attempted to play the part of the old masters and trusted their business to overseers, share-hands, and renters are not prosperous. The laborer feels no interest in making improvements, and loses fully one-fourth of the time which an owner of the soil could profitably employ. He is improvident in his management, pays little attention to food crops or anything but cotton, which brings money, and thus aggravates the ills usually attendant on agriculture. Hence the want of prosperity to which the gentleman from Alabama refers. As to the low wages, the cultivation of cotton unaided by labor-saving implements is so costly that the profits are very small, and wages are always proportionate to the profits of labor.

COTTON-PLANTERS BENEFITED BY PROTECTION.

But let us return to the gentleman's table of cotton statistics, and I will reverse the question and ask whence did all this money come? How does it happen that the cotton-planter received an average of $55,000,000 in gold more for the six years ending in 1880 than the six years ending in 1860? We find first a large increase in the production of cotton under the protective tariff. And then we find the remarkable fact that this increased production has not lowered the price of the article. The crop of 1860 was 4,823,770 bales and the crop of 1880 was 6,605,750 bales, an increase of 22 per cent., and yet the average price was 11 cents per pound in 1860 and 11.24 cents per pound in 1880, as shown by this table, or 2 per cent. more for the large crop under the so-called robber tariff than for the smaller crop under the revenue tariff. This could only come from an increased demand for cotton, and we now ask whence this increased demand came. Let us look first to the table of our cotton exports furnished by Mr. Nimmo (see report for 1880), and we see that it did not come from foreign countries:

Cotton exported.

Years ending August 31—	To the United Kingdom.	To France.	To all other countries.	Total cotton exported.
	Bales.	*Bales.*	*Bales.*	*Bales.*
1849-'50	1,106,771	289,627	193,757	1,590,155
1859-'60	2,669,432	589,587	515,154	3,774,173
1869-'70	1,474,695	346,450	357,772	2,178,917
1870-'71	2,367,440	138,703	660,599	3,166,742
1871-'72	1,454,512	184,055	318,747	1,957,314
1872-'73	1,905,566	252,903	521,517	2,679,986
1873-'74	1,867,936	370,865	602,180	2,840,981
1874-'75	1,828,049	359,699	486,700	2,674,448
1875-'76	2,019,799	455,874	755,580	3,232,253
1876-'77	1,994,418	461,088	592,630	3,028,136
1877-'78	2,047,185	495,135	813,622	3,355,942
1878-'79	2,052,555	422,948	990,433	3,465,937
1879-'80	2,554,489	397,797	912,265	3,864,551

Let us turn then in the same report to the table showing:

Cotton required for home manufacture and for exportation to foreign countries.

Year ended August 31—	Taken by home manufacturers.	Exported to foreign countries.
	Bales.	*Bales.*
1850	562,769	1,590,155
1860	964,628	3,774,173
1870	896,890	2,178,917
1871	1,100,196	3,166,742
1872	1,097,540	1,957,314
1873	1,201,127	2,679,986
1874	1,305,943	2,840,981
1875	1,200,473	2,674,448
1876	1,354,192	3,232,253
1877	1,429,005	3,028,136
1878	1,429,400	3,355,942
1879	1,561,873	3,465,937
1880	1,795,334	3,864,551

It appears from the foregoing table that the consumption of cotton by home manufacturers has increased more rapidly than the exportation of cotton to foreign countries. During the year ended August 31, 1850, there was taken by home manufacturers 26 per cent., and exported 74 per cent.; during the year 1860 there was taken by home manufacturers 20 per cent., and exported 80 per cent.; during the year 1870 there was taken by home manufacturers 29 per cent., and exported 71 per cent.; and during the year 1880 there was taken by home manufacturers 31 per cent., and exported 69 per cent.

These tables show that our cotton exports were, in 1860, 3,774,173 bales; in 1880, 3,864,551 bales; that England took less cotton from us in 1880 than she did in 1860, and that the whole foreign demand for our cotton increased only 2.4 per cent. in twenty years, while our produc-

tion of cotton increased 22 per cent. Now, let us see what kept up the price while production was so largely increased. Our home consumption was, in 1860, 964,628 bales; in 1880, 1,795,334 bales, an increase of 86 per cent. And during the same period all cotton goods which the Southern farmers consumed were reduced in price 28 per cent. Thus these so-called protection robbers by their sharp competition compelled the foreigner to pay 2 per cent. more for cotton in 1880 than he paid in 1860 before protection began, and at the same time furnished the planter with cotton goods at 28 per cent. less cost.

What better evidence could the cotton-planter ask that protection to our manufacturers has been a benefit to him? And what better proof of this could be given than that which the gentleman from Alabama gave when he said the cotton-planter received $397,882,089 more under the last six years of this protection-robber tariff than under the last six years of the revenue-only tariff? He received $55,000,000 in gold more each year under a protective tariff from the protected American bull than under a revenue-only tariff he received from the free-trade British lion. And yet the gentleman from Alabama [Mr. HERBERT] and his colleagues would tear down the barriers of protection and leave the American bull to the tender mercies of the British lion, and while the British lion slakes his thirst in the blood of the American victim the free-traders of England and the revenue-only Democrats here will shout over the performance as the pagans did when the Christians were devoured by the wild beasts in the circus at Rome. Such statesmanship deserves to rank in history with that which slew the goose to obtain the golden egg.

Again, if the old Calhoun theory be true that the cotton exports buy the imports, and if it be further true that the consumer pays the import duty, the cotton-planter could lose nothing if he paid the duty when the consumer paid it back to him. So both the statistics and the theory which the gentleman advanced showed the fallacy of the argument he made. Again, another distinguished witness testifies against him, as follows: General BUTLER, of South Carolina, in his speech on the Blair educational bill, said:

Mr. President, the South is not so desperately poor, is not in such a bad condition. Let me give some facts and figures, compiled with great care at much expense and trouble and with most commendable public spirit by the Charleston News and Courier, and I believe are as correct as such a compilation can be. I cite these figures and facts to show that the property assessed for taxation is gradually increasing in value every year. Look at the matter of cotton manufactures, which, by the way, are exempted by the State from taxation for ten years from their establishment:

"The increase in product in three years is 170 per cent., and the increase in actual capacity is considerably more. This is astonishing, but it is the fact. There is no reason why the product of the South Carolina mills in 1890 should not be $27,000,000 to $30,000,000.

"The number of spindles and looms in 1880 and 1884 is given below:

	Spindles.	*Looms.*
1880	82,334	1,676
1884	195,112	3,652

"In 1881-'83 $25,000,000 were paid for machinery for cotton mills in the South, and $7,500,000 of this amount was the additional cost caused by protective duties. But for this drawback the South could have built an additional number of mills and have increased her wealth still further."

Now, sir, I venture to say, in passing, if the General Government will relieve that State of this $7,500,000 and similar burdens in the future it would be far more profitable and acceptable than this proposed appropriation of the Treasury in aid of education. The cotton factory is a good school-house in itself.

Again, in the matter of lumber and naval stores there has been an increase in the value of the product of those two industries of 100 per cent., the products amounting in 1884 to $4,394,692, being in less than four years an increase of 100 per cent. What has been the increase in manufactured products?

The figures for previous periods indicate a growth which is as astonishing as it is gratifying. The whole value of manufactured products in South Carolina at the periods named was as follows:

1860	$8,615,195
1870	9,858,981
1880	16,738,008
1884	32,324,404

Showing an increase of $16,000,000 in three years. A great increase has gone on in agriculture. The estimate of this year's crop has been—and I will state that by way of comparison between 1860 and 1884—

Cotton bales in 1860, before the emancipation of slaves	353,412
In 1884 it is estimated at	700,000
Corn, in bushels, 1860	15,635,606
In 1884	19,210,000

and so on with other cereals and crops. The phosphate interests, land and marine, have advanced from 20,000 tons in 1868-'70 to 355,000 tons in 1883; valued for the last-named year at $2,100,000.

And there is a reviving interest and activity in gold-mining, in the great improvement in farm and domestic animals, labor-saving machinery, diversified and intensified agriculture, as the following recapitulation will show:

RECAPITULATION.

To exhibit fully the value of agricultural, manufacturing, and mining products the following tables have been prepared, the values for 1870 having been reduced to the gold standard, at the rate of 120:

1860:	
Agriculture	$45,823,512
Manufactures	8,615,195
Mines and quarries	17,000
	54,455,707
1870:	
Agriculture	$34,924,585
Manufactures	8,215,918
Mines and quarries	16,573
	43,157,076
1880:	
Agriculture	$41,969,749
Manufactures	16,738,008
Mines and quarries	1,180,805
	59,888,562
1883:	
Agriculture	$41,790,321
Manufactures	32,324,404
Mines and quarries	2,440,000
	76,554,725

FINAL RECAPITULATION.

The whole value of agricultural, manufacturing, and mining products for the last twenty-three years is as follows:

1860	$54,455,707
1870	43,157,076
1880	59,888,562
1883	76,554,725

In other words, after all the losses of the war and with free labor, the gross income of South Carolina from the sources named was 50 per cent. greater than it was in 1860.

Another has said:

The South is fast coming to rival the North in cotton manufacturing. In 1880 there were in that section 180 mills, with 713,989 spindles and 15,222 looms, while to-day there are 314 mills, with 1,276,422 spindles and 24,873 looms. No feature of Southern development is more encouraging than this rapid growth of manufacturing.

And Mississippi also is waking up to the sound of the advancing hosts of progress. The axes and the mill-saws are being heard in her splendid forests of cypress and pine, and where formerly none went now train after train goes North burdened with Southern lumber, and yet her Democratic Representatives would take off the tariff which has produced this result. She is beginning also to boast of her productions, as follows:

THE BEST WOOL IN THE WORLD.

The Mississippi Mills, at Wesson, in Copiah County, consumes about 750,000 pounds of wool annually—about 300,000 pounds of this is grade Merino, from Texas, and the remainder, 450,000 pounds, is purchased in the vicinity of the mills and in the coast counties. Captain Oliver, superintendent and treasurer of these mills, says that the finest wool in the world is grown in South Mississippi, and that the success of these mills at the Centennial and at Atlanta and all other fairs is due as much to the superiority of wool used as to excellence in handling. In corroboration of this we remind our readers that at the famous fair in Manchester, England, many years ago, wool grown in Madison County, Mississippi, took the premium over all other exhibits as the best wool in the world.—*Aberdeen Examiner.*

These mills began operations under present management in 1873. The site was, previous to the establishment of these mills, an unbroken forest. To-day Wesson is a beautiful and flourishing manufacturing village, with schools and churches, and a population of 5,000 happy and industrious people. These mills have declared large dividends, besides enough to double their original capacity. The secretary of the mills writes: "We are generally overworked on all our fabrics, and have orders now largely in excess of our production of woolen goods, and on many of our cotton goods." The Yocona mill, at Water Valley, commenced operations in 1882 with a paid-up capital of $80,000, and with 3,200 spindles. Since that time the capital has been increased to $100,000, and the number of spindles increased to 5,000. The Stonewall Manufacturing Company, near Enterprise, has a capital of $175,000, pays wages to the amount of $45,000 per annum, and is in a flourishing condition. The Natchez Cotton Mills have 10,301 spindles, 304 looms, 240 operatives, and are pushed to their utmost capacity. The Rosalie Cotton Mills, of Natchez, have 6,000 spindles, 160 looms, and employ 150 operatives. It is crowded with business.—*Jackson Ledger.*

And yet her Democratic Representatives in Congress turned a deaf ear to the petition of the grangers for protection on wool, and voted to strike down one of the greatest interests of the American farmer.

WESSON, THE MAGIC CITY OF MISSISSIPPI,

with its unrivaled cotton and woolen mills, owes its existence to an exemption law passed by a Republican Legislature, and its prosperity to the fostering influence of protection. Natchez, once the seat and center of learning, wealth, and refinement in the State, was tottering on the verge of the grave until wakened into life by the busy hum of the wheel and the loom, and she now bids fair to surpass herself in her palmiest days, when the eloquent voice of Prentiss portrayed the blessings of protection to home industries. The Gulf coast, once given over to pleasure-seekers in summer and sand-crabs in winter, is being metamorphosed by industrial employments. Other places in the State are feeling the same influence, and I take from a single paper the following notices of the town of Corinth, where once great armies met in the struggle of death, and where now the hum of machinery has been substituted for the sound of fuse and shell, and where a new life is beginning to appear:

THE SILK INDUSTRY.

The silk interest of Mississippi must be accorded prominence as among the beacons to light the way of the immigrants from France, Italy, and the other sunny lands to our Commonwealth. Last week we visited Corinth for the purpose of inspecting the cocooneries just beyond the borders of that town that have been established by our French fellow-citizens.

We first visited the establishment of Mr. L. S. Crozier, whose name and face is familiar to most of our readers, and we found in his feeding barn countless worms in all stages of development, feeding gluttonously, and rapidly approaching the weaving stage. His mulberry plantations are quite extensive, and the evidences of preparation seen on every hand betoken great future activity. He has agreed to make a handsome exhibit in the Mississippi department of the New Orleans Exposition.

From there we rode to the silk farm and mulberry plantation of Mrs. M. Doche,

one of the most intelligent and enterprising ladies in the State. She took us to her feeding barn, where hundreds of thousands of the little toilers of the choicest varieties were seen actively and healthfully at work, thriving, she assured us, as well as they possibly could in any transatlantic country. Her business is increasing so enormously that she told us that she would be obliged to put up another feeding barn, and expects next spring to have over a million of worms upon her trays.

Messrs. Adams & Ketchum, of the Corinth Foundery and Machine Shops, shipped last week to Sheffield, Ala., the "future great" city of the Tennessee Valley, the first steam-engine that will be erected within its precincts, and they have orders for five more for the same "town." This firm is almost as phenomenal as Sheffield in its rapid outcome and great possibilities. Three or four years ago it would have smiled gratefully over an order for a pair of cast-iron "fire-dogs," and yet a few months ago it underbid Cincinnati for a contract to put new boilers on the Tombigbee steamer Lotus, and is now working forty-five skilled mechanics night and day, and has among other contracts furnished seven engines to Monroe county and six to Lowndes, besides filling orders in every other county in East and North Mississippi. It is now prepared to furnish large engines and saw mill outfits within five days of the commencement of work. This can hardly be beaten anywhere.

We doubt very much whether many readers of the Examiner are aware of the fact that in Corinth there is a boot and shoe factory that does a big jobbing trade, and turns out the very finest goods for gentlemen, ladies, and children.

Mr. Thomas Newcomb, wholesale manufacturer of saddles, harness, &c., Corinth, is the proprietor of the only establishment of the kind in the State, and is doing a business that demands the constant services of twenty of the finest workmen.

And yet these free-trade lunatics, in their mad cry of a tariff for revenue only, would denounce all the men engaged in building up these new industries as robbers. They would destroy all their operations and drive their laborers into the corn and cotton fields to raise agricultural products at starvation rates to exchange with the manufacturers of the Old World. And that Southern agriculture has prospered under protection is shown by the following testimony.

INCREASE OF AGRICULTURAL PRODUCTION IN THE SOUTH.

The great advance made in manufactures of late years in the South has not prevented a like gratifying growth in agricultural production. The Manufacturers' Record, of Baltimore, says:

We have made a careful compilation of the value of all agricultural products of the fourteen Southern States in 1882, some of the figures having been obtained from the United States Agricultural Department, and others from reliable sources, the total showing the following aggregate:

Cotton	$350,000,000
Wheat	67,162,169
Corn	262,304,857
Rye	2,033,917
Oats	30,796,642
Potatoes	8,748,929
Tobacco	30,866,394
Hay	19,081,423
Barley and buckwheat	1,104,744
Sugar	20,000,000
Molasses	10,000,000
Rice	7,000,000
Orchard products	15,000,000
Vegetables	50,000,000
Total 1882	874,059,074
Total 1880	650,872,648
Increase	214,226,426

The figures show that in two years the value of the agricultural products of the South has increased over $214,000,000; but taking these statistics just as they stand they do not show the full importance attached to them when compared with the figures exhibiting the agricultural progress of the entire country. In 1880, according to the United States census, the value of all farm products for the entire country was $2,213,402,564, of which $659,872,648 was credited to the South, or only about 29 per cent. of the total, while in 1882, out of an aggregate total of $2,325,000,000, the South had $874,090,074, or about 37 per cent.; or, in other words, while the entire country made an increase of but little over 5 per cent., the Southern States made an increase of about 35 per cent.

FREE RAW MATERIAL.

And still further and stronger testimony as to the growing prospects of the South comes from Georgia, as follows:

The president of the Eagle and Phenix company says that the Southern mills now control the markets of the country in coarse cotton goods, and he predicts that the South will eventually control the cotton-goods markets of the world, because she has as many advantages over New England as the latter has over old England. And what is true of cotton is true of iron, at least so far as this country is concerned. That the pig-iron of the future will be made in the South is plain at a glance. The cost of making a ton of pig-iron in Pennsylvania is thus stated by the American Manufacturer of Pittsburgh:

One and one-half tons of ore, $8.50	$12 75
One and one-quarter tons coke, $2	2 50
Lime	85
Labor	1 50
Incidentals, repairs, taxes, &c	1 00
Total	18 60

The freest of calculations on a similar basis made a ton of iron in Alabama Georgia, or Tennessee cost as follows:

Two tons ore, $1	$2 00
One and one-third tons coke, $2	2 66
Lime	85
Labor	2 00
Incidentals	1 00
Total	8 51

This testimony as to the Southern iron interests is doubly instructive. It not only shows the capacity of the South, but it shows why iron manufacturers like Mr. HEWITT, of New York, are talking about free raw material in iron. This cry is another blow at the South, and if followed up will result in perpetuating sectional feeling.

Senator GEORGE, of Mississippi, is demanding free agricultural implements, which is a farce, because, as Senator WILLIAMS, of Kentucky, said, an American farmer would not have a foreign agricultural implement as a gift. Even trace-chains, so much talked about, are cheaper here than in England.

But Senator GEORGE also demanded free machinery as encouragement for Southern mills, and if this be pressed from the South, while Mr. HEWITT and others from the North press for free raw material of iron, it will be an admission of the doctrine of protection on both sides, but will tend to separate the friends of protection on sectional lines. The noble and patriotic spirit exhibited by Judge KELLEY, of Pennsylvania, who would extend protection equally over all sections of the Union, stands in striking contrast with the spirit of Mr. HEWITT, of New York.

The gentleman from Tennessee, Hon. CASEY YOUNG, has stated this proposition so strongly and so clearly shown it would be folly for the South to listen to this free material argument now, that I quote his language as follows:

But now, when the inexhaustible beds of iron ore which underlie vast regions in Alabama, Georgia, and Tennessee have been discovered, and shafts are being sunk and furnaces being built for its manufacture, it is proposed to put iron on the free-list. Eastern manufacturers have grown rich by protection. They have large sums of money invested in extensive plants and improved machinery; they have skilled artisans and trained operatives, with everything nicely adjusted for the successful prosecution of their business, so that to give them the raw material free of duty, and thus cripple or destroy the recent and newly established manufactories in the South, they could contend against competition from other countries.

And so, too, with coal. Upon this article there has always been a duty imposed; but now, after the largest deposits on the continent have been found in the South, and when mining it is growing into a large and profitable industry, it is proposed to put that on the free-list along with most other valuable Southern products. I am told that the iron and coal interests South require no protection against foreign competition, and possibly this may be so; but that fact does not seem to have been discovered in some localities until within a very recent period.

A HOT-HOUSE PROCESS.

All this advance and development of Southern resources has come under this so-called protection and robber tariff; but we are told the tariff was not the cause of it. That it never came before the adoption of this protective tariff and has come and is coming now is sufficient to make us pause and ponder well before we of the South change a policy that is bringing so radical and beneficial a change to us.

It is said that the protective system is a hot-house process for producing manufactures, and we grant it to be true. We have seen New England grow like magic under its influence. Flourishing manufacturing towns and villages have sprung up among its hills and valleys, and its cold, rock-ribbed soil has been made to yield productive returns of agricultural products which find a ready home market in the busy manufacturing centers of the State. The fructifying influence of this hot-house process is just now beginning to be felt in the South, and it would be worse than folly in us to raise the glass too soon and let in the freezing air upon our tender plants.

A black frost in June would not more certainly wither and destroy the tender plants of the cotton-field than would the frost of an anti-protection tariff now blight the infant manufactories and destroy the rice and sugar productions of the South. But we are told that manufactures should not be pressed, but left to natural development. Experience teaches that men are prone to travel the paths their fathers trod, and need constant teaching and strong encouragement to induce them to enter on new avocations.

VIRGINIA VS. NEW YORK.

With milder climate, longer days, cheaper labor, and less cost of transportation for the raw material, the South for a long period of years failed to enter on manufacturing, and thus furnishes a most striking illustration of the fallacy of trusting to nature to build up manufactures.

Virginia, with the best harbor on the Atlantic seaboard, with a climate of unsurpassed salubrity, with mountains filled with every species of mineral wealth, with valleys capable of producing the richest agricultural results, with water power unlimited, peopled by the proudest and most intellectual of the Anglo-Saxon race, seemed marked by nature for the foremost State of the Union; and yet she has fallen far behind her sister States and some of her own children in the race for wealth, prosperity, and power. She taught the doctrine of free trade and until recently she has stood as a monument to the fallacy of her own teachings. The contrast between Virginia and New York is the contrast between an agricultural and an industrial community, between trusting to nature and attempting to surpass nature by industry and art, between the doctrines of free trade and home development, between the teachings of Calhoun and Giles upon the one side and Clay and De Witt Clinton on the other. Let the other and younger States of the South look on this picture and then on that and determine from reason and judgment, and not from passion, sentiment, or prejudice, under what banner they will hereafter enroll themselves and for what principles they will hereafter fight.

THE INFANTS.

But when we speak of infant industries we are tauntingly asked how

long it will be before our infants are grown, and we are told Mr. Clay thought three years' protection would suffice. Great men thought 75,000 men in ninety days could take Richmond, but they were mistaken, and the friends of protection were overconfident when they thought industries but one hundred years old could overthrow those, which had the accumulated strength of centuries. It is said we have never encouraged agriculture, but this is a mistake. When religious fanaticism drove skilled labor from Europe England offered large bounties to attract them to her shores; but no attractions which England offered for mechanics and artisans were ever equal to the attractions offered by the homestead laws of the United States to induce farmers to come and develop our agricultural resources. And the aid given to build railroads, though primarily beneficial to them has been equally beneficial in developing our agricultural resources, until Western grain once rotting in the field or burned for fuel now swells our exports and feeds a starving world. Our exports of wheat, corn, flour, and meal, which were in 1850 only 14,476,037 bushels, increased in 1880 to 279,876,510 bushels. Mr. David A. Welles, in his lecture on Free Trade in Brooklyn, though perhaps not so intended, bears ample testimony to the encouragement we have given to agriculture. He says:

It is clear, therefore, that the foremost industry of the country—agriculture—has already reached the point of an abnormally high production, and yet the whole tendency of things is to enlarge the sphere of this great industry and to still further increase its product. Thousands of acres of new grain lands are being annually added to our area of cultivation; improved methods of culture increasing product and diminishing the necessity for manual labor, are being continually introduced, while less than one-sixth of our arable land has as yet been brought under the plow. It is not, therefore, a matter of hypothesis, but one of certainty, that if the agricultural development which has characterized the last ten years of our history is to be continued, it must end through ruinous overproduction, in immense loss and disturbance to our great farming interests.

But let us advance one step further in this analysis of the national situation. Immigration is pouring in upon us at the rate of 700,000 per annum, and our total increase of population for the present decade bids fair to exceed 12,000,000. If with a view of preventing our already excessive surplus of food products from becoming more excessive any considerable portion of this large increment is to be diverted from agriculture, it must find employment in commerce or manufactures. * * * The pressing necessity of the hour with us, therefore, is an extension of our markets for our produce, and in default thereof we are certain to be smothered in our own grease.

THE REMEDY PROPOSED.

Now, what is the remedy which Mr. Wells proposes? He tells us the country does not "need more brains, Congress excepted," and he seems to be engaged in the laudable undertaking of furnishing brains for the impotent Congressmen of his own party. He says the remedy is to remove the tariff so as to enable foreign nations to sell us their productions in exchange for our own, and says we can then march out boldly and capture the trade of the world. How the removal of the barriers of protection is to strengthen our manufactures to compete with the world is to me a mystery past finding out.

After we have been for years fighting behind the intrenchments of protection and scarcely able to hold our own against the foreign enemy the revenue Democrat tell us to march out boldly and capture him in the open field. Imagine Pemberton marching out of Vicksburg to capture Grant, or Secretary Chandler sailing out in the Tallapoosa to capture the British fleet, and the wisdom of this advice is fully seen. We can not afford such ridiculous and dangerous experiments. Having begun the contest fighting behind intrenchments, against fearful odds, let us stand to our guns until the enemy has exhausted himself by repeated ineffectual assaults upon our works, and then we may march out and drive him from the open field. This idea of driving trade seems to be a favorite theory with revenue Democrats.

DRIVE NORTHERN MANUFACTURERS SOUTH.

Some of our Southern statesmen, notably Senator GEORGE, of Mississippi, have calculated the percentage of advantage which the South has over the North in various branches of manufacturing, and in their stump speeches at home they tell the people that a reduction of the tariff to a revenue standard will break up manufacturing in the North and drive Northern manufacturers with their capital South. But they fail to calculate the powerful advantage which established plant and fixed capital would have in competition with struggling infant institutions in the South if protection was removed now. If this were true, it is not the part of a statesman or a patriot to advocate any policy which he knows or believes will bring ruin upon any portion of our common country. But it is not true. Prosperity seldom comes from adversity. Capital is what we need to develop the South, and capital is a coy maiden to be woed and won and not driven into any alliance. If we by a too sudden reduction of the tariff destroy Northern manufacturing interests, capital, which is always timid, will not soon venture on manufacturing enterprises anywhere else in the Union.

If, however, we do nothing to disturb these vested interests, manufacturers will gradually and quietly wind up their business in localities where it does not pay, and seek more profitable fields for their enterprise, and then we may trust to our natural advantages to bring us the capital we so much need.

PROTECTION TO THE MISSISSIPPI VALLEY.

We of Mississippi not only want capital for industrial enterprises, but we want and we have asked for protection for our great valley from the floods of the Mississippi River. We have said and we believe that a dissipation of the waters of the Mississippi River checks its velocity and precipitates its silt, thus producing sand-bars in its channel dangerous to navigation and productive of overflows; that a concentration of its waters by jetties and levees so that its whole volume and weight can be confined in one narrow channel will hurry it on to the Gulf with greater silt-bearing power and scour out its bed so deep that no future protection from levees will be needed.

Let Mississippians, then, unite with home protectors everywhere in demanding protection for home industries in all parts of the Union. Let us feel that we are citizens of a great nation whose power and prosperity we delight in, and then we can more consistently ask and more reasonably expect to receive national protection from the surging floods of the Mississippi River, which threaten our destruction as the mad theories of free trade threaten the destruction of the industrial interests of the whole country.

INDEPENDENT.

I am not a member of either the Democratic or Republican organization, though there is something to admire in the professions of each and much to condemn in the practices of both. Believing that Mississippians should lay aside passion, prejudice, and sentimental politics, and look alone to their material development, I shall not chain myself to the wheel of any party car, but as different questions arise shall support that man and that party which in my judgment will best promote the interest of the people I represent. I shall oppose any party that is unwilling to protect by discriminating duties the American laborer, and the vested interests of American citizens of every class. I shall oppose any party whose desire to create an

UTOPIA

of exact justice and equality in taxation, would permit the fires of our forges to go out, the wheels of our machinery to stand still, the capital invested in our industrial interests to perish, and would force our skilled mechanics to learn new lessons in their old age or wander as tramps over the face of the earth. Such seems to be the result of the political economy of the revenue Democrats, and such madness has not been equaled since we of the South sacrificed in war our substantial rights in the States to secure our fanciful rights in the Territories.

IN CONCLUSION.

In the eloquent language of my distinguished friend, Col. Thomas W. Harris, of Mississippi, I say: "Sir, I once loved the old Democratic party with all the fond devotion of a son to his mother. My venerated father received many of the highest honors in its gift, and bequeathed to his children the love and gratitude he felt. But I should feel that I had dishonored his grave and his memory were I to cling to the loathsome carcass of modern Democracy, upheld in the South by fraud, perjury, and iniquity, when the spirit which gave it life, purity, and honor has fled, I fear forever. Dr. Johnson said that superstition was religion without morality. Such seems to be the Democracy of the South today. It is better that the body clothed with the triumphs of years should be buried out of sight since the soul that once made it glorious has fled, in the hope that a resurrection morn may come, when the vestal fires shall be rekindled on its altars, and when, phenix-like, it shall rise from its ashes clothed in the imposing grandeur of youth, strength, and beauty, and live alone for the honor, welfare, and glory of our common country."

APPENDIX.

PROTECTION TO MANUFACTURES IS PROTECTION TO AGRICULTURE.

This principle and its results are so well stated and illustrated in Report No. 3 of 1883 of the Agricultural Department, pages 22 and following, that I feel justified in inserting them here:

To test the value of this hypothesis let us divide the States and Territories of the United States into four classes, the first having less than 30 per cent. engaged in agriculture; second, those with 30 and less than 50 per cent.; third, those with 50 and less than 70 per cent., and fourth, those having 70 per cent. and over, being almost exclusively agricultural States.

VALUE OF LANDS.

Applying this test to the value of lands, the following result is obtained:

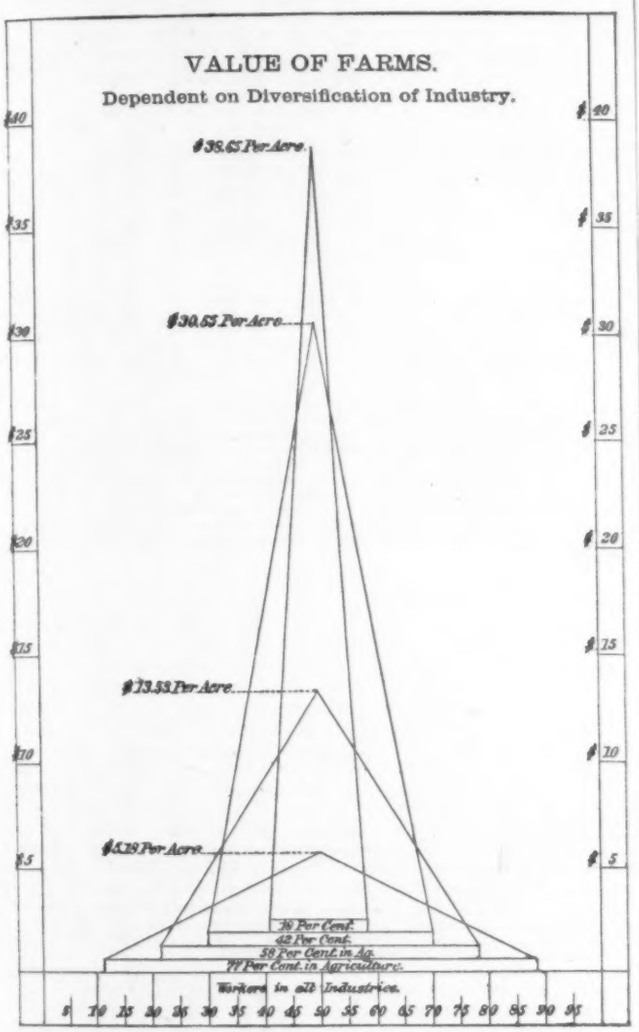
Classes.	States and Territories.	Farms.	Value.	Value per acre.	Workers in agriculture.
	No.	*Acres.*	*Dollars.*	*Dollars.*	*Per ct.*
First class	15	77,250,742	2,985,641,197	38 65	18
Second class	13	112,321,257	3,430,915,767	30 55	42
Third class	13	237,873,040	3,212,108,970	13 53	58
Fourth class	6	108,636,796	552,430,842	5 18	77

[See diagram on opposite page.]

As the proportion of agricultural to other workers diminishes the value of land increases, but in a much higher ratio. In the almost exclusively agricultural States eight acres are worth little more than one in the first-class, consisting of States of the largest non-agricultural population. In the class which averages 42 per cent. in agriculture the land is of more than twice the value of farms in the class which averages 58 per cent. of the people in rural employments.

The following States and Territories all have less than 30 per cent. of their

Diagram showing value of farm lands as affected by increase of non-agricultural population.



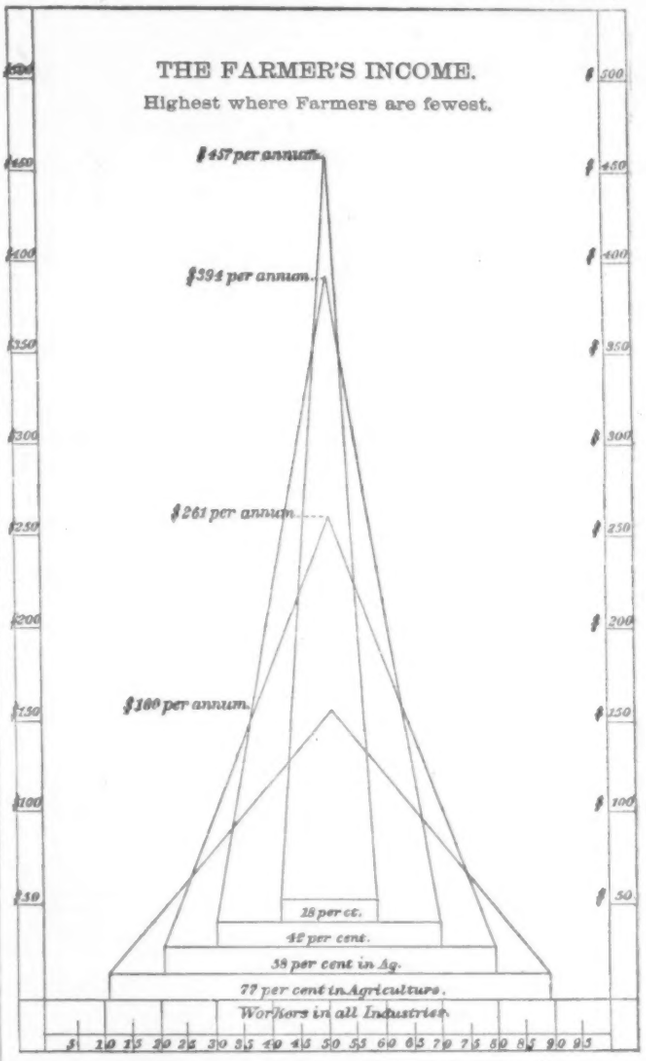


Diagram of value of products as affected by increase of non-agricultural population.

aggregate of persons in all occupations engaged in the pursuits of agriculture, and they average but 18 per cent.:

States and Territories.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
District of Columbia	18,146	3,632,403	200 18	2
Massachusetts	3,359,079	146,197,415	43 52	9
Rhode Island	514,813	25,882,079	50 27	9
Colorado	1,165,373	25,109,223	21 55	13
Nevada	530,862	5,408,325	10 19	13
Arizona	135,573	1,127,946	8 32	15
New Jersey	2,929,773	190,895,833	65 16	15
Wyoming	124,433	855,895	6 72	18
Connecticut	2,453,541	121,063,910	49 34	18
Montana	405,683	3,234,504	7 97	20
New York	23,780,754	1,056,176,741	44 41	20
Pennsylvania	19,791,341	975,689,410	49 30	21
California	15,593,742	262,051,282	15 79	21
Idaho	327,798	2,832,890	8 64	25
Maryland	5,119,831	165,503,341	32 33	28
Total	77,250,742	2,985,641,197	38 65	18

In this list the most diverse conditions are represented. On one extreme the District of Columbia has but 18,146 acres of agricultural land, which is valued at $200 per acre as suburban property under the shadow of a large city. On the other, small areas in the Territories are surrounded by immense bodies of unoccupied lands, which are given away by the United States Government, keeping the prices of cultivated farms low, though they are rising with great rapidity. California and Colorado are similarly situated, yet further advanced in point of time and in development of industries, and of course showing higher prices. In the States in which there is no public land to depress prices there is no averge that is not higher than the general average of the next class of States having 30 to 50 per cent. in agriculture; the range of prices is from $32.33 per acre in Maryland to $65.16 in New Jersey. Though New Jersey has 15 per cent. in agriculture, the influence of the adjacent populations of Philadelphia, New York, and Brooklyn reduces practically her percentage to a lower proportion than Massachusetts and Rhode Island.

When the proportion of farmers is increased to half or two-thirds, the price of land declines seriously, as follows:

States.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
Virginia	19,835,785	216,028,107	10 89	51
Missouri	27,879,276	375,635,307	13 47	51
Minnesota	13,403,019	193,724,260	14 45	52
Indiana	20,420,983	635,236,111	31 11	52
Louisiana	8,273,506	58,989,117	7 13	57
Iowa	24,752,700	567,430,227	22 92	57
Nebraska	9,944,826	105,932,541	10 65	59
West Virginia	10,193,779	133,147,175	13 06	61
Kentucky	21,495,240	299,298,631	13 92	62
Florida	3,297,324	20,291,835	6 15	64
Kansas	21,417,468	235,178,936	10 98	64
Tennessee	20,666,915	206,749,837	10 00	66
Texas	36,292,219	170,468,886	4 70	69
Total	237,873,040	3,218,108,970	13 52	58

The States having over 70 per cent. engaged in agriculture are as follows:

States.	Farms.	Value.	Value per acre.	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
Georgia	26,043,282	111,910,540	4 30	72
North Carolina	22,363,558	135,793,602	6 07	75
South Carolina	13,457,613	68,677,482	5 10	73
Alabama	18,855,334	78,954,648	4 19	77
Mississippi	15,855,462	92,844,915	5 86	82
Arkansas	12,061,547	74,249,655	6 16	83
Total	108,636,796	562,430,842	5 18	77

The second class includes the smaller manufacturing States of the East and the older States of the West, in which the agricultural population is less than half of all.

States and Territories.	Farms.	Value.	Value per acre.*	Workers in agriculture.
	Acres.	*Dollars.*	*Dollars.*	*Per cent.*
New Hampshire	3,721,173	75,834,389	20 38	31
Delaware	1,090,245	36,789,672	33 74	33
New Mexico	631,131	5,514,399	8 74	35
Maine	6,552,578	102,357,615	15 62	35
Utah	655,524	14,015,178	21 38	36
Ohio	24,529,226	1,127,497,353	45 97	40
Oregon	4,214,712	56,908,575	13 50	40
Washington	1,409,421	13,844,222	9 82	42
Michigan	13,807,240	499,103,181	36 15	42
Illinois	31,673,645	1,009,594,580	31 87	44
Wisconsin	15,353,118	357,709,507	23 30	47
Vermont	4,882,588	109,346,010	22 40	47
Dakota	3,800,656	22,401,084	5 89	49
Total	112,321,257	3,430,915,765	30 55	42

*Average.

This list embraces also a few of the Territories and a State or two in which the unoccupied public lands continue to depress prices of farm lands.

It is conceded that differing degrees of fertility must affect prices, and other causes may be operative; yet such is the controlling force of preponderating non-agricultural population in raising prices that we find the average of this class to be more than 25 per cent. lower than class first.

INCOME OF THE FARMER.

The owner of land finds a great advantage in the increase of the proportion of non-agricultural population. Does the cultivator of the soil obtain an annual product of higher value? The answer is an emphatic affirmative in the following statement from the census of 1880:

Classes.	Engaged in agriculture.	Products of agriculture.	Value per capita.	Workers in agriculture.
	Number.	*Dollars.*	*Dolls.*	*Per ct.*
First class	1,060,681	484,770,797	457	18
Second class	1,566,875	616,850,959	394	42
Third class	3,017,971	786,681,420	261	58
Fourth class	2,024,966	324,237,751	160	77

There are nearly twice as many agricultural producers in the fourth class as are found in the first, yet the crops of the million are worth much more money than all the results of labor of the 2,000,000 workers. The class that has 58 per cent. in agriculture makes $101 per annum more than that which has 77 per cent., and the class with the lower average of 42 per cent. gets $133 above the earnings of that which averages 58 per cent. in agriculture.

It is not assumed that there are no other causes affecting the quantity and value of the farmer's crops which cause variations in the exhibit of individual States, but the relative proportions of agricultural and non-agricultural population constitute a factor which dominates all other factors, so that when such data are co-ordinate in classes of States the result appears with the invariability of the operation of law. That all these variations may be seen and the causes sought by the rural economist, the following details are given:

States and Territories.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
District of Columbia	66,624	1,464	2	$514,441	$351
Massachusetts	720,774	64,973	9	24,160,881	372
Rhode Island	116,979	10,945	9	3,670,135	335
Colorado	101,251	13,539	13	5,035,228	372
Nevada	32,233	4,180	13	2,855,449	683
Arizona	22,271	3,435	15	614,327	179
New Jersey	396,879	59,214	15	29,650,756	501
Wyoming	8,884	1,639	18	372,391	227
Connecticut	241,333	44,026	18	18,010,075	409
Montana	22,255	4,513	20	2,024,923	449
New York	1,884,645	377,460	20	178,025,695	472
Pennsylvania	1,456,067	301,112	21	129,760,476	431
California	376,505	79,396	21	59,721,425	752
Idaho	15,578	3,858	25	1,515,314	393
Maryland	324,432	90,927	28	28,839,281	317
Total	5,786,710	1,060,681	18	484,770,797	457

The largest income is enjoyed by the farmer of California, not only because 79 per cent. of the people of that State are outside of agriculture, making a market for his crops, but because of the demand throughout the United States for fruits, wines, and other peculiar products of that favored State. Wool is also a productive source of income, due to the market made by the woolen mills of other States.

Only in Oregon and Illinois, in the second class, are rural incomes up to the average of the first class, and only in New Mexico and Dakota are the annual earnings down to the average of the third class, so uniform is the action of this principle of industrial economy.

States and Territories.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
New Hampshire	142,468	44,490	31	$13,474,330	$303
Delaware	54,580	17,849	33	6,320,345	354
New Mexico	40,822	14,139	35	1,897,974	134
Maine	231,993	82,130	35	21,945,489	267
Utah	40,055	14,550	36	3,337,410	229
Ohio	994,475	397,495	40	156,777,152	394
Oregon	67,343	27,091	40	13,234,548	489
Washington	30,122	12,781	42	4,212,759	330
Michigan	569,204	240,319	42	91,159,858	379
Illinois	999,780	436,371	44	203,980,137	467
Wisconsin	417,455	195,901	47	72,779,496	372
Vermont	118,584	55,251	47	22,082,656	400
Dakota	57,844	28,508	49	5,648,814	198
Total	3,764,725	1,566,875	42	616,850,959	394

In the almost exclusively agricultural States the range of income per man is quite uniform, from $140 in South Carolina to $202 in Arkansas, the average of all being $160. It may be claimed that labor, from climate or race considerations, is less efficient than in other States, but it is evident from the small areas planted, except in cotton and corn, and the small products gathered, that the lack of diversity in industry, and even of variety in agriculture, is dwarfing the magnificent resources of this great belt of States. The wisest and brightest of these farmers have reiterated this sentiment for a generation, and many are acting on it; but the reflex influence of manufactures and mining would accomplish more for agriculture than the most persistent direct efforts for the improvement of agriculture.

Range of income.

States.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
Georgia	597,862	432,204	72	$67,028,929	$155
North Carolina	480,187	360,937	75	51,729,611	143
South Carolina	392,102	294,602	75	41,108,112	140
Alabama	492,790	380,630	77	56,872,994	149
Mississippi	415,506	329,938	82	63,701,844	187
Arkansas	260,692	216,655	83	43,796,261	202
Total	2,639,139	2,024,966	77	324,237,751	160

In the following list Iowa, Minnesota, and Nebraska lead in average income. They have below 60 per cent. in agriculture, have rich lands, easily cultivated, and send a large proportion of their products to Eastern and foreign markets, and therefore have less of the stagnation of isolation.

States.	Persons in all occupations.	Persons in agriculture.	Per cent. in agriculture.	Products of agriculture.	Value per capita.
Virginia	494,240	254,069	51	$45,726,221	$180
Missouri	692,959	355,297	51	95,912,660	270
Minnesota	255,125	131,535	52	49,468,951	376
Indiana	635,080	331,240	52	114,707,082	346
Louisiana	363,228	205,306	57	42,883,522	209
Iowa	528,302	303,557	57	136,103,473	448
Nebraska	152,614	90,507	59	31,708,914	350
West Virginia	176,199	107,578	61	19,360,049	180
Kentucky	519,854	320,571	62	63,850,155	199

Kansas	322,285	206,080	64	52,240,361	253
Tennessee	447,970	294,153	66	62,076,311	211
Texas	522,133	359,317	69	65,204,329	181
Total	5,201,525	3,017,971	58	786,681,420	261

WAGES OF LABOR.

Having shown that the value of the farm and the income of the farmer are enlarged by increasing the proportion of non-agricultural laborers in a State, it is important to inquire whether the farm laborer shares in the advantage to the owner and cultivator of the soil. Fortunately a definite answer can be given from repeated and trustworthy returns of the wages of farm labor to the Department of Agriculture.

In 1870, when wages and prices generally were high, the average wages of farm labor in the first or manufacturing class of States was $34, while in the last, exclusively agricultural class, it was but $15. When the panic came, and years of manufacturing depression followed, mechanics and artisans competed with farm laborers and reduced the price of rural labor. It is a fact that prices at different times furnish an accurate measure both of the industrial status of the laborers and the prosperity of the great industries of the country.

In 1882 the wages of agricultural labor averaged nearly $25 in the first and second class, $19.50 in the third, and $13.20 in the fourth. The demand for wheat and corn, beef and pork, the product of Ohio, Michigan, Illinois, Wiscon-

sin, and other States of the second class, to supply home, eastern, and foreign markets, brought up the value of farm labor to an equality with wages in the States of the first class. The scarcity of laborers, who prefer farms of their own, also contributed to high rates in this class. Where more than half of the workers are farmers, the competition of laborers reduces inevitably the rate of wages. So we find that where the proportion reaches three-fourths, the reduction usually amounts to 50 per cent.

The influence of manufacturers, of mining, of any productive industries on local prices, whether of farms or farm products or farm labor, is plainly traceable in States and in various districts within the States by the furnace-fires, the mines, the factories that thickly dot the location where high prices for farm labor prevail.

The diagrams illustrate in a striking manner the operation of what may be deemed a law in industrial economy, and show that the value of farm lands depends more upon the diversification of industry than upon the fertility of the soil, and that the farmer's income is highest where farmers are fewest.

Backbone Railroad Land Grant.

SPEECH

OF

HON. EDWARD T. LEWIS,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 26, 1884.

The House having under consideration the bill (H. R. 5682) to repeal section 22 of the act to incorporate the Texas Pacific Railroad Company, approved March 3, 1871, and to declare the forfeiture of the land grant therein made, and for other purposes—

Mr. LEWIS said:

Mr. SPEAKER: It seems to me the gentleman from Illinois [Mr. PAYSON] has become a new convert. He has faced about entirely upon the position which he has taken heretofore in the committee and upon the floor of this House in regard to land-grant forfeitures. I state, and he can not deny it, that in regard to the bill reported to this House with reference to the Northern Pacific Railroad land grant he has taken the position with the majority of the committee that time is of the essence of the grant; and he has joined the majority of the committee in reporting in favor of forfeiting every acre of land in that case where the road was not constructed within the time. He can not deny it. He is upon record in favor of that position. He has contended in every report before this House in cases of this kind that time is of the essence of all these land grants. He has so voted in committee; he has so acted in this House; and he dare not deny it. Yet he comes before this House in this case, and says that time is not of the essence of these grants.

Mr. PAYSON. Mr. Speaker——

Mr. LEWIS. You can not deny it. I will not yield to you one moment of time. You did not treat me with any courtesy, and I do not propose to treat you with any.

Mr. PAYSON. Then I rise to a parliamentary inquiry.

Mr. LEWIS. You can not interrupt me in this way. I will not be interrupted.

The SPEAKER *pro tempore* (Mr. SPRINGER in the chair). The gentleman from Illinois can not take the gentleman from Louisiana from the floor by a parliamentary inquiry.

Mr. PAYSON. Then I rise to a question of order.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. PAYSON. The question of order I desire to make is that I think perhaps the gentleman is hardly warranted in saying what I "dare" or "dare not" do.

Mr. LEWIS. That is not a question of order.

The SPEAKER *pro tempore*. That is not a question of order.

Mr. PAYSON. Then I call the gentleman to order.

Mr. LEWIS. I think, Mr. Speaker, after the gentleman's exhibition before the House to-day he dare do anything.

The SPEAKER *pro tempore*. The gentleman from Louisiana will suspend. The gentleman from Illinois will state his point of order.

Mr. PAYSON. I think it is hardly parliamentary for the gentleman to say what "the gentleman from Illinois" "dare" or "dare not" do. This is hardly the forum perhaps for the interchange of remarks of that kind. In the country I come from, that is not the way we do.

The SPEAKER *pro tempore*. A question of order of that kind can not be addressed to the Chair. The only question is whether the language is parliamentary.

Mr. LEWIS. I withdraw it if it is considered unparliamentary. I still think he dare not assert——

Mr. PAYSON. I hope the gentleman will not take advantage of his position to say that.

Mr. LEWIS. I am speaking in this sense of the term that I do not think he would have the rashness to deny the correctness——

Mr. PAYSON. I do deny it, and I have ever denied it, and have never asserted such a doctrine as the gentleman now asserts.

Mr. LEWIS. Very well. It is a simple question. I stand upon my individual responsibility and upon the evidence before the House in various reports made to this House that the position occupied by the gentleman on this bill in regard to the essentiality of time in land grants is totally inconsistent with the position he has occupied on that precise question in the reports we have before this House.

I wish to say this, that we hold to the position that it is the duty of legislators here assembled to claim for and in behalf of the Government and the people every right under the law to these public lands to which the Government and the people are entitled; that if we fail in these matters to claim all to which the Government is entitled we will thereby waive it; and that if we claim more than the Government is entitled to, it will not prejudice the legal right of the parties when they come before the courts, and therefore no harm is done to them.

Mr. SCALES. Is Louisiana any more interested in these lands now than any other State, or its delegation than any other?

Mr. LEWIS. Not one particle.

Mr. SCALES. They belong to the whole country, and the position of that delegation does not make any difference.

Mr. LEWIS. These public lands in the State of Louisiana are a part of the purchase from France in 1803. This public domain belongs equally to every citizen of the United States, out of Louisiana as well as in Louisiana. I as a Representative from the State of Louisiana am here advocating not alone the rights of the people of Louisiana but the rights of the people of the whole United States and of the Government to this public domain.

Our position is, if we claim too much the courts will correct it; but if we claim too little it will be a loss to the Government and the people. I say, therefore, it is our duty to vote for this declaration of forfeiture and let the matter go to the courts.

Mr. Speaker, owing to the confusion on the floor at times during the discussion of this bill, and the many apparently conflicting assertions made, I think it proper that I should make a somewhat fuller statement than has yet been made on either side. The difference of opinion prevailing among members and the prominence given to the matter by reason of this difference, will, I think, justify such a statement at length.

On the 30th of December, 1869, the New Orleans, Baton Rouge and Vicksburg Railroad Company was chartered by the Legislature of Louisiana. The company was—

> Authorized and empowered to lay out, locate, construct, equip, and thereafter to own, maintain, operate, and enjoy a continuous single or double track railway from any point on the line of the New Orleans, Jackson and Great Northern Railroad within the parish of Livingston, running from thence to any point on the boundary line dividing the State of Louisiana and Mississippi by such route as the company may deem most direct and practicable with a view of continuing and completing the said railroad to the city of Vicksburg, in the State of Mississippi. (Section 1.)

"To lay out, construct," &c. * * * "a single or double branch railway" from any point on its main line to Baton Rouge, and to any other points on the river in the State of Louisiana.

> And should the said company acquire by grant or purchase other railroads or parts of railroads, rights of way, or franchise appertaining thereto, the same shall be merged into and become part of said railroad. (Section 2.)
>
> That the said company, for the purpose of connecting its railroad with the railroads of other companies, and with mines and manufactories within the State of Louisiana, is hereby authorized and empowered to construct, maintain, and use, by running thereon its engines and cars, such branch railroads and tracks as it may find necessary and expedient to own and use; and all the powers, privileges, grants, and franchises which have been heretofore granted to said company, and which are by this act granted to said company, for the construction and maintenance of its main line of railroad within the State of Louisiana shall be, and are hereby, made applicable to such branch railroads, and for all the purposes of this act such branch railroads shall be deemed and taken to form and constitute a part of the said main line of said railroad within the State of Louisiana in this act designated and referred to. (Section 27, last paragraph.)

It will be well to note here the care with which the Legislature seemed to provide for a great central system of railways, how jealously it guarded that idea. Full power of expropriation is given to secure the right of way in the act for the main line and all its branches, but every branch built or leased or owned or controlled by the company must form and become part of the main line, must be merged into it; the identity in name and character of the road must be preserved. Every grant of power to build or own or use branch roads is specifically coupled with the condition that it must form part of it and be merged in the main line.

It should be observed further that, under the twenty-seventh section just quoted, this company was not confined to branches limited by the Mississippi River on the west, but it was "authorized and empowered to construct, maintain, and use * * * such branch railroads and tracks as it may find necessary and expedient to own and use." This was a grant of power to construct any branch road they pleased, and was ample enough to enable them to build a branch road in any direction and to any point in the State, to Shreveport, or to the State line at any point, "for the purpose of connecting its railroad with the railroads of other companies."

I call particular attention to the sections quoted, because of the position I understand the gentlemen on the other side to take, namely, that subsequent legislation was necessary to enable the company to go west of the river to any point in the State.

That the original act of incorporation gave the requisite power is sustained by the amendatory legislation itself. The title shows that it was intended to accomplish other and different objects. The gentleman from Alabama [Mr. OATES], who made the strongest connected argument in the case, laid stress upon the fact, or rather asserted, that the amendatory legislation of 1872 practically changed the terminus from Marshall to Shreveport, and contended that prior to this act the company had no "charter from the State authorizing it to go to Shreveport or to any point on the west side of the Mississippi River." (See RECORD, pages 5610, 5639.)

I call attention to this, because much if not the entire force of his argument on this branch of the case hinges upon this assumption. Now let us see what this amendatory legislation is. The title is:

An act to authorize the New Orleans, Baton Rouge and Vicksburg Railroad Company to select the point or points for the commencement of their road, to reduce the liability of the State of Louisiana by authorizing said company to issue first-mortgage bonds, and to construct and employ, or cause to be constructed or employed, steamboats or other vessels and telegraph lines along the line of railroad of said company.

Under the constitution of the State of Louisiana the title of an act of the Legislature must embrace the objects and purposes of the act, and unless it does the act is clearly unconstitutional.

Now, I challenge the astute gentleman from Alabama to discover in the title of this act a word or a syllable showing that the object or purpose of this act was to confer additional power upon the company to construct any new road or branch road—any road they did not have the authority to build independently of that act. On the contrary, the title clearly implies the previous existence of that right. It is not an act to authorize the company to build a new road or another branch, but "to select the point or points for the commencement of their road." What road? Evidently one previously provided for; not one therein authorized. This is too manifest for argument—indeed, so manifest that any one would see it at a glance, and yet my friend has failed to discover it. But let us go a step further.

The very first sentence of the preamble recognizes the existence of the previous legislation, and shows that the Legislature was acting intelligently and making some needed provision in respect to a road already chartered. It reads:

Whereas by act of the Legislature of the State of Louisiana, approved December 30, 1869, entitled "An act to incorporate the New Orleans, Baton Rouge and Vicksburg Railroad Company and to expedite the construction of their road," &c.; and

Whereas said company has, by act of Congress, approved March 3, A. D. 1871, entitled "An act to incorporate the Texas Pacific Railroad Company and to aid in the construction of its road, and for other purposes, become the recognized branch of the Texas Pacific Railroad from its eastern terminus," &c.; * * * and

Whereas the early commencement, construction, and completion of the New Orleans, Baton Rouge and Vicksburg Railroad is secured by said grant of land from the United States Government and the legislation therein provided.

Thus it will be readily seen that not only the title but the preamble of the act recognizes the fact that a road had been previously provided for, but the precise act in terms referred to. And we have in the second paragraph of the preamble a specific declaration that "said company (the New Orleans, Baton Rouge and Vicksburg Company) has * * * become the recognized branch of the Texas Pacific Railroad Company from its eastern terminus," thus clearly and unmistakably indicating a legislative recognition of the fact that Congress had fixed the eastern terminus of the Texas Pacific, and that the Backbone had become a branch of that road, not from Shreveport, but from its eastern terminus.

The gentleman from Alabama must therefore have overlooked the preamble as well as the title of the act.

But go a step further. The act proceeds in the first section to declare that said company (the Backbone) "shall have full power and authority," not to construct, maintain, equip, &c., a single or double track railway from Baton Rouge to Shreveport or Alexandria or anywhere else, but "to commence the construction," not of a branch road to Shreveport, but "of their road, in the city of New Orleans or Shreveport or at any intermediate point or points;" not on any new road therein authorized, but—

On their line of road, as may best suit the convenience of said company and facilitate the speedy construction of a continuous line from the city of New Orleans to the city of Shreveport or perfect railroad communication with the Texas Pacific Railroad or any other railroad in Northwestern Louisiana, at or near the State line: *Provided, however*, That the said company shall construct the line of its road between the city of New Orleans and the city of Baton Rouge on the east side of the Mississippi River to the corporate limits of the said city of Baton Rouge or adjacent thereto.

The remaining portion of the act has no bearing on the question in hand, but any one who cares to read it will see that it is in strict accord with the title. Certain it is there is nothing indicating an intention to create a new line of railway not contemplated before, but every indication of a delegation of power deemed essential to carry out some former design—authority to begin the construction at different points of a road previously authorized.

Stress, however, was laid upon the fact that Congress amended the charter of the Texas Pacific in May, 1872, and that this act preceded in point of time the one we are considering; and my friend from Alabama assumed that the latter was a legislative recognition of the former. He did not attempt to show or prove it, but contented himself with a statement to that effect. It is to be regretted that he did not look a little closer into its provisions, or he would have discovered that while the act in the second paragraph specifically recognizes the act of March 3, 1871, incorporating the Texas Pacific, it is utterly silent as to the act of May 2, 1872. I might invoke the maxim, *expressio unius est exclusio alterius*, so far as the language of the statute is concerned. His assumption or statement has nothing to rest on but the presumption that the Legislature must be presumed to have known the previous legislation of Congress and to have acted in reference thereto. To this I give my assent and stand by it; but so far as the legislator has expressed his intent he has made no reference to this act, but has only referred to the charter and to the fact that that charter had fixed an eastern terminus from which the Backbone was to become a "recognized branch." But the gentlemen on the other side repudiate this principle when I invoke it by the reverse process. Of this, however, I shall speak later on.

It will be seen, by recurring to the act as above quoted, that it not only contemplates an eastern terminus of the Texas Pacific, at which the Backbone was to connect therewith, but expressly provided that the line of its road should be on the east side of the river from New Orleans to Baton Rouge.

The charter had designated the location of the main line from a point in Livingston Parish, on the Jackson Railroad, east of New Orleans, and on the east side of the Mississippi River, and specifically provided for a branch to Baton Rouge; and here we find the charter—amended with specific reference to an act of Congress, with full knowledge of the grant of land contained in that act, together with all the conditions coupled therewith—amended for the purpose of availing itself of the grant and with direct reference thereto, and in that act making or rather reiterating and emphasizing its former location of the road on the east side of the river as far as Baton Rouge. I pass now to a consideration of the acts of Congress. The grant, as I have already stated, is in the twenty-second section of the act of March 3, 1871, and is in these words:

That the New Orleans, Baton Rouge and Vicksburg Railroad Company, *chartered by the State of Louisiana*, shall have the right to connect, by the most eligible route to be *selected* by *said company*, with the said Texas Pacific Railroad at its *eastern terminus*, and shall have the right of way through the *public lands* to the same extent granted hereby to the said Texas Railroad Company; and in aid of *its* construction from New Orleans to Baton Rouge, thence by the way of Alexandria, in that State, to connect with the said Texas Railroad Company at its *eastern terminus*, there is hereby granted to said company, its successors and assigns, the same number of alternate sections of public land per mile in the State of Louisiana as are by this act granted in the State of California to said Texas Pacific Railroad Company; and said lands shall be *withdrawn* from market, selected, and *patents issued* therefor, and opened for settlement and preemption, upon the same terms and in the same manner and time as is provided for and required from said Texas Pacific Railroad Company within said State of California: *Provided*, That said company shall complete the *whole* of said road *within five years* from the *passage* of *this act*.

The italics are mine.

Before going further it is important to ascertain the exact meaning and scope of the language here employed. Much confusion I think has grown out of a failure to do this in the discussion. A critical examination will show—

First. A recognition by Congress of the fact of prior legislation by the State of Louisiana, and not only the fact, but the character and extent of that legislation. The language is: "that the New Orleans, Baton Rouge and Vicksburg Railroad Company, chartered by the State of Louisiana, shall have the right," &c. It is simply absurd to say that Congress in legislating for the benefit of this company was ignorant of the provisions of its charter. I mean all of its provisions, and among them the location of the road, as well as others, for its location is found in the first section of the act.

Second. That the company was authorized to select the most eligible route by which to connect with the Texas Pacific road.

The opponents of the bill contend, if I am not mistaken, that by the grant of this power the company was fully authorized to locate their road on either side of the river, or in fact anywhere; and the gentleman from Illinois [Mr. PAYSON], with much apparent dogmatism, asserted the power of the National Government under the decision of the Supreme Court in the Granger cases to do what it pleased in relation to transcontinental lines; that it made "no difference whatever as to the restrictions which the State Legislature made upon the local corporation." I shall not discuss the propositions so loosely stated by him on this subject. They are not only loosely stated, but have no connection, none whatever, with the subject-matter of the bill, nor any relation to any position taken by any one who has participated in the discussion. The question is not what power Congress has over the question of interstate commerce, but what Congress did or attempted to do in this particular matter. Did the act either directly or by implication authorize the grantee to build on the west side of the river? Unless it clearly appear that Congress did intend to change the geographical location of the road as to the river, or confer upon the company power to do so, it had no such authority.

It can not be said that Congress would lightly repeal or change known provisions in an act of a State Legislature, and the intention to do so

must clearly appear, for otherwise no court would so hold. These laws are in *pari materia*, must be construed together, and receive that interpretation which will give effect to the whole. To say that the company, under the authority to select its route, can thereunder disregard the provisions of the charter in that respect is to hold that Congress, by remote implication (there is nothing express), repealed an important requirement of the very act in relation to which it was legislating, and the benefit of which it sought to avail itself.

I think, therefore, a fair and just interpretation of this language is that the discretion as to the selection of routes was to be exercised under the restraints imposed in the charter as to the general geographical location of the line from New Orleans to Baton Rouge. The eligibility of the different routes on the east side of the river was the extent of the power granted. Besides all this, one would naturally think if Congress had intended to authorize this radical change of route it is a little strange, to say the least of it, that Congress did not say so.

I may here remark that this view was never questioned by the grantee. The maps of location filed by them in the Interior Department all show the road to be located on the east side of the river. It was their understanding, it was the interpretation placed by them upon the statute, and no other contention was ever heard of until the astute gentlemen on the other side discovered this miraculous mine of power.

Third. That a right of way was given through the "public land," and nowhere else; thus illustrating the idle waste of legal lore with which the gentleman from Illinois [Mr. PAYSON] regaled the House as to the power of the "National Government" over "transcontinental lines" in the States.

Fourth. That the company was given the right to connect with the Texas Pacific at a certain place—its "eastern terminus"—and in aid of the construction of its road from New Orleans to Baton Rouge, thence by way of Alexandria to connect with the Texas Pacific at its "eastern terminus," a grant of land was made. The point at which the connection was to be made is not left in doubt, being mentioned twice, and so far as language can make it so its location is here definitely fixed.

Fifth. That the said lands shall be withdrawn from market, selected, and patents issued therefor in the same manner and time as is required of the Texas Pacific in California.

Section 12 of the act contains the provisions here alluded to, and is as follows:

> That whenever said company [Texas Pacific] shall complete the first and each succeeding section of twenty consecutive miles of said railroad and put it in order as a first-class road in all its appointments, it shall be the duty of the Secretary of the Interior to cause patents to be issued *conveying* to said company the number of sections opposite to and conterminous with said completed road to which it shall be entitled for each section so completed. Said company, within two years after the passage of this act, shall designate the general route of its said road, as near as may be, and shall file a map of the same in the Department of the Interior; and when the map is so filed the Secretary of the Interior, immediately thereafter, shall cause the lands within forty miles on each side of the designated route within the Territories, and twenty miles within the State of California, to be withdrawn from pre-emption, private entry, and sale.

A proviso follows not material to the issue and is omitted.

Though somewhat out of order, I shall here advert to a point suggested after the report of the Public Lands Committee was prepared, and in relation to which no discussion was had. The grant in this case, by common consent on all hands, has been held to be a present grant upon condition subsequent, and hitherto that has not been questioned. Further investigation and reflection, however, has led me to doubt the correctness of the proposition.

The words employed in this act are words of present grant. "There is hereby granted to," &c., means, as a general rule, that an estate is immediately vested, and conditions attached to such a grant are usually conditions subsequent, but it is not invariably the case. The use of such words in a statute does not always create a present estate.

The language above quoted from the twelfth section seems to be inconsistent, manifestly so, with the idea that this is a present grant. It declares, as will be seen, that *whenever* said company shall complete the first and each succeeding consecutive section of twenty miles of road then the Secretary of the Interior shall issue patents, *conveying*, &c. The idea here is that the construction of the road must precede the conveyance or transfer of the title.

I do not care to elaborate but to merely suggest the point, and shall only refer to a decision rendered by Judge Deady, of the district court of the United States (8 Sawyer), in the case of the United States *vs.* Childers, wherein the character of the Northern Pacific grant was brought in question. The language of that grant is almost identical with this.

The granting words are: "That there be, and hereby is, granted to the Northern Pacific Railroad Company, its successors and assigns," &c., and "that whenever said Northern Pacific Railway Company shall have twenty-five consecutive miles of any portion of said railroad and telegraph line ready for the service contemplated" by the act, and that fact shall be made to appear in the manner provided by the act, "patents of lands aforesaid shall be issued to said company, confirming to said company the right and title to said lands situated opposite to and conterminous with said completed section of said road; and from time to time whenever twenty additional consecutive miles shall have been constructed, completed, and in readiness as aforesaid, and verified by said commissioners to the President of the United States, then patents shall be issued to said company, conveying the said additional sections of land as aforesaid;" provided that only ten sections per mile "shall be conveyed to said company" on the line of the road east of the western boundary of Minnesota, &c.

The judge, after quoting Schulenberg *vs.* Harriman as follows: "They [the authorities] established the conclusion that *unless there are other clauses in a statute restraining the operation of the words of present grant*, these must be taken in their natural sense to import an immediate transfer of title," says:

> But in my judgment the clauses in section 4 [above quoted] of the act under consideration, concerning the conveyance of the lands granted to the corporation as each section of twenty-five miles of the road is constructed and accepted by the grantor, does restrain the operation of the words of present grant in section 3; so that it appears manifest that while it was the intention of Congress to set apart and devote the lands in question absolutely to the construction of the Northern Pacific Railroad, yet it did not intend to part with the title to them until and only so fast as they were earned by the completion of the work.

(See also 1 Black, 358; 16 Wallace, 603; 22 Wallace, 444–464.)

If this be good law it would seem that the grant, in that case as also in this, was upon condition precedent and not subsequent, in which event by all the rules of law, and not disputed, the conditions in all respects must be strictly complied with in respect of time as of other conditions before the estate can be created.

So far it is clear that the Backbone company was required to construct its road on the east side of the river, and to connect with the Texas Pacific at its eastern terminus, which, it is not denied, was fixed in the granting act at Marshall, Tex. It is also clear that nothing in the amendatory act of December 11, 1872, made any change in these respects, but on the contrary gave emphasis to them.

Now, let us see what there is in the act of Congress of May 2, 1872. Confessedly there is nothing in that act having any bearing upon the question before the House except the latter part of section 5, which is as follows:

> *Provided*, That said Texas and Pacific Railway Company shall be, and is hereby, authorized to construct, maintain, control, and operate a road between Marshall, Tex., and Shreveport, La., or control and operate any existing road between said points of the same gauge as the said Texas and Pacific Railroad; and that all roads terminating at Shreveport shall have the right to make the same running connections, and shall be entitled to the same privileges for the transaction of business in connection with the said Texas and Pacific Railway as are granted to roads intersecting therewith: *Provided further*, That nothing herein shall be construed as changing the terminus of said Texas and Pacific Railway from Marshall, as provided in the original act.

The gentleman from Alabama [Mr. OATES] contends that this law changed the terminus of the Texas Pacific, and attempts to explain away the plain meaning of the words by making a distinction between termini. According to his notion Shreveport is the actual and Marshall the business terminus; that is, that the road has two eastern ends. He ignores entirely the idea, plainly embodied in the act, that Marshall was to be the radiating point eastward for the Texas Pacific system, and at which this road was specifically required to make its connection; and he apparently makes the mistake of supposing that Congress required the Texas Pacific to maintain a road to Shreveport for the exclusive benefit of the Backbone. He does not seem to know that a road running across the State of Louisiana from Vicksburg, in the State of Mississippi, terminating at Shreveport, La., has been in process of construction for years; that Congress years ago made a grant of land to that road, which is now nearly completed, and that connection at that point was necessary to facilitate trade and travel going eastward or westward through the State. He seems also to be oblivious of the fact that nowhere in any of the legislation on this subject does the legislator express a purpose to change the original design either as to the location or terminus of these roads; but on the contrary, in plain and unmistakable language, insists upon maintaining both.

The Backbone company had no doubt the right to build to Shreveport; but Congress did not make the grant upon the condition that they should build to that place, but to Marshall, forty miles distant.

On the question, therefore, of completion of the road I think it manifest that the road has not been built where the law plainly required it to be built, nor has it been constructed to the point where the law, with equal precision, required the connection to be made.

Let us now examine the transfer or assignment upon the validity of which the claimant company rest their case. Among the different gentlemen who have discussed the various questions involved not one has touched what I consider the fatal defects of this transfer.

The attack on this line has been to refute the validity of the act repealing the charter of the Backbone company. The gentleman from Illinois [Mr. PAYSON] was especially pointed and emphatic on this point, and dwelt with gusto upon the Dartmouth College case. He enunciated principles no one disputes and spent his force in knocking down something upon which nobody had laid any particular stress.

The point to which I wish to direct attention is that neither the president nor the directors of a railroad company have any legal authority to sell its assets by virtue of the functions of their offices. Such

a sale must be made by the stockholders. Now, what was done? I append the history of this transfer as it appears in the record:

OFFICE OF THE NEW ORLEANS, BATON ROUGE AND VICKSBURG RAILROAD COMPANY,
No. 150 Broadway, New York, December 29, 1880.

At a special meeting, duly called, of the board of directors of the New Orleans, Baton Rouge and Vicksburg Railroad Company, held this day at the office of the company, there was present a quorum of the board.

In the absence of the president of the company, Mr. Simpson was called to the chair.

On motion, duly seconded, the following resolution was unanimously adopted:

Resolved, That the president and secretary of this company be, and they are hereby, authorized to transfer to the New Orleans Pacific Railway Company, on such terms as they shall see fit, all the right, title, and interest of this company in and to the land granted to this company by an act of Congress approved March 3, 1871, entitled "An act to incorporate the Texas Pacific Railroad Company and to aid in the construction of its road, and for other purposes," and to make and execute in the name of this company such deed or instrument as shall be necessary to complete such transfer.

On motion, the meeting was adjourned subject to the call of the president.

WM. M. BARNUM, *Secretary.*

This indenture, made the 5th day of January, 1880, between the New Orleans, Baton Rouge and Vicksburg Railroad Company, a corporation created and existing under and by virtue of a special act of the Legislature of the State of Louisiana, approved December 30, 1869, party of the first part, and the New Orleans Pacific Railway Company, a corporation created and existing under and by virtue of the laws of the State of Louisiana, party of the second part, witnesseth—

That the said party of the first part, for and in consideration of the sum of one dollar lawful money of the United States of America to it in hand paid by the said party of the second part, at or before the ensealing and delivery of these presents, the receipt whereof is hereby acknowledged, and of other good and valuable considerations, has remised, released, and quitclaimed, and by these presents does remise, release, and quitclaim, unto the said party of the second part and to its successors and assigns, forever—

All the right, title, and interest of the said party of the first part, its successors or assigns, of, in, or to a certain grant of public lands granted to the said party of the first part by an act of the Congress of the United States, approved March 3, 1871, and entitled "An act to incorporate the Texas Pacific Railroad Company, and to aid in the construction of its road, and for other purposes," together with all and singular the tenements, hereditaments, and appurtenances thereunto belonging, or in any wise appertaining, and the reversion and reversions, remainder and remainders, rents, issues, and profits thereof.

To have and to hold all and singular the above-mentioned and described premises, together with the appurtenances, unto the said party of the second part, its successors and assigns forever.

In witness whereof the said party of the first part hath caused its corporate seal to be hereunto affixed, and these presents to be signed by its president and secretary, the day and year first above written.

W. H. BARNUM, *President.*
WM. M. BARNUM, *Secretary.*

Sealed and delivered in the presence of—
CHAS. L. BEAMAN,
CHAS. EDGAR MILLS.
CHARLES NETTLETON, [SEAL.]
Commissioner for Louisiana in New York.

[The Western Union Telegraph Company. * * * Dated, New Orleans, February 19, 1881. Received at ——, ——.]

To Hon. W. H. BARNUM,

President New Orleans, Baton Rouge and Vicksburg Railroad Company:

In pursuance of the resolution of the board of directors of the New Orleans Pacific Railway Company, passed February 3, 1881, I hereby accept in behalf of said company the deed and transfer executed by the New Orleans, Baton Rouge and Vicksburg Railroad Company, bearing date of January 5, 1881, conveying all is rights, title, and interest into and under the land grant made by section 22 of the act of Congress approved March 3, 1871.

THE NEW ORLEANS PACIFIC RAILWAY COMPANY,
By E. B. WHEELOCK, *President.*

(Indorsement:) Received the within this 19th day of February, 1881. The New Orleans, Baton Rouge and Vicksburg Railroad Company, by W. H. Barnum, president.

(Indorsement:) 1377, C. 14. Department of the Interior, Lands and Railroad Division, "M." Received October 29, 1881.

Proxy.

Know all men by these presents, that I, David Smith, do hereby constitute and appoint E. B. Wheelock attorney and agent, for me, and in my name, place, and stead, to vote as my proxy at an election of diretors of the New Orleans, Baton Rouge and Vicksburg Railroad Company, to be held December 9, 1881, and also vote as my proxy upon any other business which may come before the stockholders' meeting, to be held on the day named, according to the number of votes I should be entitled to vote if then personally present.

In witness whereof I have hereunto set my hand and seal this —— day of ——, 1881.

D. SMITH. [SEAL.]

Sealed and delivered in presence of —
—— ——.

Armed with these nine proxies he proceeds to do sundry things, all of which will appear in the following extract from the record, as made up in Senate Executive Document No. 31:

Minutes of a meeting of stockholders of the New Orleans, Baton Rouge and Vicksburg Railroad Company, held at the office, No. 20 Camp street, on the 9th day of December, A. D. 1881, from the hour 12 m. to 2 p. m.

The meeting having been organized by the selection of Mr. E. B. Wheelock as president and Thomas F. Maher as secretary, the following resolution was presented:

Resolved, That the action of the board of directors and officers of this company in transferring to the New Orleans Pacific Railway Company all the right, title, and interest of this company to the lands granted to this company by act of Congress approved March 3, 1871, and entitled "An act to incorporate the Texas Railroad Company, and to aid in the construction of its road, and for other purposes," be, and it is hereby, approved, ratified, and confirmed.

And said resolution having been voted upon was passed unanimously—42,775 shares voting therefor.

The president stated that the next business in order was the election of a board of directors of the said company, and the following ticket of names was presented.

Charles J. Canda.	Lucien Birdseye.	Edward E. Hooper.
N. B. Stevens.	S. S. Brooks.	Wm. H. Barnum.
John W. Simpson.	James G. Janeway.	Wm. L. Scott.
Charles C. Deming.	David S. Draper.	
Willis Gaylord.	Allan McCulloh.	

And there being no other nominations, the election was proceeded with, Messrs. J. W. Patton and L. L. Davis, of New Orleans, being duly appointed commissioners of election to receive, count, and return the votes; and the votes having been duly cast, the commissioners made their return, which is hereto annexed and made part of these minutes, as follows:

NEW ORLEANS, *December* 9, 1881.

We, the undersigned commissioners of an election held in this city, at the office No. 20 Camp street, to receive and count the votes cast to choose a board of directors of the New Orleans, Baton Rouge and Vicksburg Railroad Company, hereby certify that the following votes were cast, to wit:

	Shares.
William M. Barnum	35,001
B. G. Clarke	20
J. Counsellor	600
G. W. Cochran	6,150
David Smith	1,000
Charles C. Deming	1
James G. Janeway	1
Allen McCulloh	1
John W. Simpson	1
Total number of votes	42,775

The said votes were cast as follows:

FOR DIRECTORS.	*Votes.*
1. Charles J. Canda	42,775
2. N. B. Stevens	42,775
3. John W. Simpson	42,775
4. Charles C. Deming	42,775
5. Willis Gaylord	42,775
6. Lucien Birdseye	42,775
7. S. S. Brooks	42,775
8. James G. Janeway	42,775
9. Allen McCulloh	42,775
10. Edward E. Hooper	42,775
11. William H. Barnum	42,775
12. William L. Scott	42,775
13. David S. Draper	42,775

J. W. PATTON,
LAWSON L. DAVIS,
Commissioners.

BOARD OF DIRECTORS.

Chas. J. Canada.	Lucien Birdseye.	Wm. H. Barnum.
N. B. Stevens.	S. S. Brooks.	Wm. L. Scott.
John W. Simpson.	James G. Janeway.	David S. Draper.
Charles C. Deming.	Allen McCulloh.	
Willis Gaylord.	Edward E. Hooper.	

I hereby vote for the foregoing names as directors of the New Orleans, Baton Rouge and Vicksburg Railroad Company, then under proxy of the following stockholders: Wm. M. Barnum, 35,001 shares; B. G. Clarke, 20 shares; J. Counsellor, 600 shares; G. W. Cochran, 6,150 shares; David Smith, 1,000 shares; Chas. C. Deming, 1 share; James G. Janeway, 1 share; Allen McCulloh, 1 share; John M. Simpson, 1 share.

E. B. WHEELOCK, *Attorney.*

NEW ORLEANS, *December* 9, 1881.

(Indorsement:) Board of directors to be elected.

And it appearing by said return that 42,775 shares were duly voted for the said candidates and that the said candidates were duly and unanimously elected, the president of the meeting so declared.

And there being no other business before the meeting, the meeting adjourned at 2 o'clock p. m.

THOS. F. MAHER, *Secretary.*

NEW ORLEANS, *December* 9, 1881.

NEW YORK, *October* 20, 1881.

DEAR SIR: As a stockholder of the New Orleans, Baton Rouge and Vicksburg Railroad Company, and claiming to be entitled to an interest in the land grant heretofore made to that company by the act of Congress of 1871, I would beg to state that I am not yet satisfied of the regularity of the transfer of the land grant of that company to the New Orleans Pacific Railway, and I beg that no patents be issued to the New Orleans Pacific Railway Company for any land that would come under the grant to the New Orleans, Baton Rouge and Vicksburg Railroad Company until I shall have an opportunity of presenting to you a statement of the true position of the matter.

That you may understand who I am, as well as my standing and reliability, I beg to refer you to Senator Henry M. Teller.

Very respectfully, yours,

C. R. BISSELL.

Hon. S. J. KIRKWOOD,
Secretary of the Interior.

NEW YORK, *November* 18, 1881.

DEAR SIR: As intimated in my letter addressed to you on the 20th ultimo, I, Charles R. Bissell, as a holder of a large amount of the stock of the New Orleans, Baton Rouge and Vicksburg Railroad Company, now enter my formal protest against the issuing of patents to the New Orleans Pacific Railway Company for any lands granted by the act of Congress of 1871 to the New Orleans, Baton Rouge and Vicksburg Railroad Company, for the following reasons:

That the transfer of the grant to the New Orleans, Baton Rouge and Vicksburg Railroad to the New Orleans Pacific Railway Company was made without proper consideration, and in fact without any consideration at all, to the New Orleans, Baton Rouge and Vicksburg Railroad Company.

That the said transfer was made without being submitted to the stockholders of said New Orleans, Baton Rouge and Vicksburg Railroad Company, and without the knowledge of a large number of the stockholders.

That the directors authorizing said transfer had no authority to authorize the same, and had not been duly elected within a year before said transfer was authorized, and that the parties claiming to act as directors and authorizing said transfer were in fact "mere dummies," as admitted by the secretary of said company, and were acting in the sole interest of the president and secretary of the New Orleans and Baton Rouge Company, who own a large majority of the shares of said railway company, and are endeavoring to secure to themselves the entire benefits arising from the transfer and sale to the New Orleans Pacific.

I therefore beg of you that before patents are issued on said transfer I may be permitted to substantiate what I herein claim.

Very respectfully,

C. R. BISSELL.

Hon. S. J. KIRKWOOD,
Secretary of the Interior, Washington, D. C.

These documents contain the entire history of this assignment, except that but one proxy is given, only one being necessary, as all were alike and evidently cut out of the same cloth and by the same hand. I invite a critical examination, for no one can make it without coming to the conclusion—a conclusion that will irresistibly force itself upon the mind—that the whole transaction is a fraud consummated by "dummies." I have neither the time nor patience to point it out, but desire only to direct attention to the legal effect of the proxy. It is but a mandate or power of attorney, upon the construction of which the case turns. If under the law it did not give authority to ratify the sale made by the president of the company there was no legal assignment of the grant.

The law of Louisiana by which this power of attorney should be controlled is clear and positive. Article 2996 of the civil code of that State is as follows:

A mandate conceived in general terms confers only power of administration.

If it be necessary to alienate or give a mortgage or do any other act of ownership, the power must be express.

Article 2997 illustrates the above, as follows:

Thus the power must be express and special for the following purposes: To sell or to buy; to encumber or hypothecate, &c.

I doubt whether any court would hold that the proxy given in this case conferred the power upon the mandatary, Mr. Wheelock, to do what he attempted to do, that is, to ratify the act of the president and secretary in making the assignment.

It confers power "to vote as proxy at an election of directors of the New Orleans, Baton Rouge and Vicksburg Railroad Company, to be held December 9, 1881, and also vote as proxy upon any other business which may come before the stockholders' meeting." Here is specific power to do a particular act, namely, to vote for directors and a general power to vote on any other business coming before the meeting. The former is specific, the latter general, and both powers of an essentially administrative character. Surely it can not be said that any express power is here given to sell or ratify, and the action of Mr. Wheelock in holding his meeting of stockholders and ratifying the assignment is *ultra vires*, and if this be so the Backbone company has not been legally divested of whatever rights it may have had in the land grant.

But I am met here with the suggestion that the company does not complain, and that it does not lie in the mouth of any one else to do so. I answer that the record is full of complaints from parties in interest, there being protest upon protest and complaint upon complaint filed in the Interior Department. I answer, further, that the Government is interested and has an undoubted right to avail itself of every legitimate ground upon which it is possible to recover from the grasp of speculators the patrimony of the people. I answer, still further, that if it be true, as repeated *ad nauseam* by the advocates of the railroad in this matter, that any one interested in a condition can perform it and thus destroy the condition, it is equally true that the Government, interested in behalf of the people, can claim the benefit of an omission to do that which was necessary to be done to conclude it.

It is idle to say the Government has no interest in this matter. That position can only be maintained upon the theory that the grantor has no interest in the estates it has granted upon condition, whether precedent or subsequent. The Government is the grantor here, and has the unquestionable right to avail itself of any defeasance of which the grantee may be guilty.

I pass now to the third branch of the case, which is, that time is of the essence of the grant. There is no pretense that any road whatever was constructed by any company within the time fixed in the granting act, and the question is, is it material?

It is well to bear in mind that Congress has never in any case that I am aware of made a railroad grant without fixing a time within which the road should be constructed as a condition, and in construing the effect of such a condition it is singular in the extreme that Congress seemed never to forget or omit to insert such a condition. If such conditions had been only occasionally inserted in a granting act, one might suppose that it was unimportant; that Congress was jesting and perhaps trifling with the divine right of railroads; in fact, one might suggest a great many theories to show that Congress did not mean what it said, but when it invariably says a road must, as a condition, be built within a certain time, I think it quite natural for the people, if not the lawyers, to believe that there is some meaning in it.

It will not do to say that Congress means nothing in using such language. What is the intent, the purpose, the design? For intent, purpose, and design there surely is. In some cases it may be to secure a speedy settlement of an uninhabited, wild, and perhaps fertile country, to the end that the "general welfare" and prosperity of the people may be promoted; in others it may be to give a more speedy means of transportation between different sections of the country, and perhaps enhance the value of lands lying contiguous to the road. An increase in the value of the lands is evidently one of the objects expected to be accomplished, for the moment a land grant is made the Government doubles the price of the lands within the limits of the grant subject to entry. This enhancement in the value of the public land must be one of the objects sought to be accomplished by the building of a road; and as the Government immediately upon making the grant and withdrawing the granted land from market doubles the minimum price of land not granted within the limits of the grant, on the ground that a road is to be built through the lands granted, it is reasonable to exact of the grantee that the road should be constructed within a given time. The Government otherwise would not be justified in doubling the price of its land.

Now, take the case in hand. In 1872 and 1873 the lands granted to this company were withdrawn from market and the price of the even sections subject to entry within the limits of the grant were immediately doubled in price, because of the expected completion of the road within five years—by the 3d of March, 1876.

Congress in effect said to these railroad builders, "We desire to promote the speedy sale and settlement of the public domain by the people—to facilitate their means of intercommunication and transportation, and to that end we will assist by granting a part of the public land; but in order that these results shall be reached as soon as possible we will require that the road shall be constructed and completed as quickly as possible within a given time."

Mr. Pomeroy, in his work on specific performance, volume 1, section 384, says:

When the nature of the subject-matter is such that its value necessarily changes—that is, either increases or decreases with the mere lapse of time—time is then of the essence of the contract, and performance must be completed at the specified time.

Continuing on the same subject in section 385, he says:

It is settled that time is essential in contracts for the sale and purchase of stock in those relating to the transfer of shares in business corporations and joint stock companies and in contracts for life annuities.

Another very important class of contracts in which time is essential, from the very object and purpose of the agreement, consists of those made with the direct object of promoting or carrying out business or commercial enterprises, including those for the sale and purchase of land to be used for carrying on trade and business.

Who shall say, who can say, with truth, that the promotion or carrying on of business or commercial enterprises among the people was not one among the leading objects and purposes of this and all other similar grants?

And who can deny that the construction of a railroad increases the value of the contiguous lands or say that it makes no difference to the people whether this increase shall occur in one, or five, or fifteen years? Does it promote the general welfare of the people for which alone these grants are made to leave the accomplishment of these results to the caprice of corporations? Are the commercial and business interests of the country and the appreciation of the property of the people to be submitted to their convenience? Surely not; and I can but think that Congress, invariably inserting time as a condition of these grants, intends to make it essential.

I add the following authorities:

The time fixed is at law deemed of the essence of the contract. (Sugden on Powers, Perkins's edition, page 395, and authorities there cited.)

The general opinion has always been that the day fixed was imperative on the parties at law.

It is to be hoped, therefore, that the day appointed will always be deemed of the essence of the contract at law. (*Ibid*, page 397.)

The Committee on Public Lands contends, in strict accordance with law as I think, that all the conditions of a grant by statute must be strictly construed, and on this branch of the subject I quote the following authorities:

Justice Field in Farnsworth's case (2 Otto, 62), says:

But it is said that provisions for forfeiture are regarded with disfavor and construed with strictness, and that courts of equity will lean against their enforcement. This, as a general rule, is true when applied to cases of contract, and the forfeiture relates to a matter admitting of compensation or restoration; but there can be no leaning of the court against a forfeiture which is intended to secure the construction of a public work, in which the public are interested, where compensation can not be made for the default of the party, nor where the forfeiture is imposed by positive law.

He cites the case of Keating *vs.* Sparrow in 1 Ball and Beatty, and quotes with approbation Lord Manning's language, who says:

It is manifest that in cases of mere contract between parties this court will relieve when compensation can be given, but against the provisions of a statute no relief can be given.

Justice Story says:

It is clearly established that courts of equity will not interfere in cases of forfeiture when there can not be any just compensation decreed for the breach. Thus, for example, in the case of a forfeiture for the breach of a covenant not to assign a lease without license, or to keep leasehold premises insured, or to renew a lease within a given time, no relief will be given, for they admit of no just compensation or clear estimate of damages. (2 Story's Eq. Just., sec. 1324. See also note and Hilliard on Real Property, 4th ed., 528.)

Continuing on the same subject, he says:

Where any penalty or forfeiture is imposed by statute upon the doing or omission of a certain act, there courts of equity will not interfere to mitigate the penalty or forfeiture, if incurred, for it would be in direct contravention of the direct expression of the legislative will. (*Ibid.*, sec. 1326. See also note.)

It is a settled rule "that public grants are to be construed strictly, and that nothing passes by implication." (1 Black, 380; Rice *vs.* Railroad Company; 11 Peters, 544; 8 Howard, 581; 13 Howard, 81; 16 Howard, 435; 27 Penn., 339; 2 Barn. & Ad., 792; 7 M. & Gr., 253.)

To recapitulate: I think I have shown that the road was not completed, that the claimant company did not legally acquire the grant by its alleged assignment, and that the conditions of the grant have not been complied with, and if I have not done so to the satisfaction of the opponents of the bill, I have at least thrown sufficient doubt around the pretensions of the claimant to justify any fair-minded man in supporting the measure in the interest of the people.

Much has been said about the action, of what has been constantly called the Government—about the road having been built on the faith of the grant and about the action of the Louisiana delegation. Reference has been frequently made to the latter, and stress has been laid upon the fact that I alone of that delegation have been opposing this grant. Such distinctions are invidious.

Allusion to them can have no other purpose than to put me in the light of a factionist, arraying myself in opposition to the wishes of the people of my State as represented by my colleagues. The gentleman from Mississippi [Mr. VAN EATON] "rolled it under his tongue as a sweet morsel," and took particular pains to put the evidence of it in the RECORD. With my colleagues I have no cause of quarrel, feeling assured that this was not of their seeking. I am content to render an account to my constituents as, I am sure, they are prepared to do. Nor shall I bandy words with the gentleman from Mississippi, but lest his fervid zeal may have led some unwitting member to think unkindly of me for daring to differ with my colleagues and with him, I will produce my warrant of authority. It is to be found in the following resolutions of some of the local authorities of my district. I invite his special attention particularly to the first. If he will read it he will find that I am not alone in my opinion of the fraudulent character of the Backbone matter, and may possibly come to the conclusion that I am not misrepresenting my constituents.

THE POLICE JURY.

CLINTON, LA., *June* 5, 1883.

The police jury met in regular session. Minutes of the last meeting read and approved. All members present.

Resolved (1), That the protest and resolutions presented and read by Mr. Henry Skipwith, sr., be adopted as read, and upon motion carried. The same was ordered published.

PROTEST OF EAST FELICIANA.

Whereas the Secretary of the Interior has recently set aside the protest of the Florida parishes—of which East Feliciana is one—remonstrating against the recognition of a grant of lands commonly called the grant to "the Backbone railroad," a fraudulent concern, which was by some adroit impecunious adventurers and speculators organized fifteen years or more ago as a tributary to the Texas Pacific, and which never had any vitality, except the unlimited cheek of its projectors, and never gave any evidence of life except by running a survey from Pontchatoula to Baton Rouge, thence to Clinton, and thence to some point northeastward, never, we believe, definitely ascertained; but presumably the survey was continued as far as enough public land could be found within thirty miles of the projected line to pay all the costs of the construction of the road. Beyond that survey of the proposed line and the accumulation of some formidable piles of cross-ties along the surveyed line, the Backbone railroad was a swindling myth which was originally projected for no purpose whatever except to enrich a few greedy speculators, by getting a position to gobble up a large slice of the valuable franchises of the Texas Pacific. Respectfully and firmly do we, the police jury of East Feliciana, remonstrate against the perpetration of a most unmitigated fraud upon the people of the communities in which this overshadowing land monopoly is created.

We remonstrate, with no hope or expectation of prevailing with the Secretary of the Interior, who has already decided that he is powerless to apply a remedy for the wrong done these communities; a wrong so flagrant that it conveys to a gang of worthless schemers all the public domain between the Mississippi River and the Illinois Central Railroad for nothing. In Louisiana, we conjecture, it amounts to 500,000 acres, and how much in the State of Mississippi we have not enough data to justify a conjecture. If it be urged that the claim of the Florida parishes is not for a restitution of these identical lands, but for an acre of land scrip for every acre of land surveyed by order of Congress from the Montpelier and Greensburg land offices, we respond to such an objection that since 1812 the United States has treated this territory as a muniment of eminent domain, but always against the protests of our vigilant and clear-sighted ancestors—notably on the two occasions which we are proceeding to recite, to wit:

When, on the 10th day of October, 1810, the convention which was the governing power of the free, sovereign, and independent State of West Florida, sent a hospitable invitation to the Government of the United States to come and assume jurisdiction over the territory which the people of West Florida had conquered from the King of Spain, the convention inserted in the invitation an express reservation of title in the soil of the conquered domain to the conquerors thereof.

Secondly, in the first Legislature which met after Congress had extended the laws of Louisiana over the domain recently governed by the State of West Florida—in the first Legislature of Louisiana, we repeat, in which the Florida parishes had representation, the proposition was made to petition the General Government to open a land office for the survey and sale of lands within the borders of the defunct State of West Florida upon an equal footing with the other public lands in the State of Louisiana. To the adoption of that measure our ancestors protested on the grounds that the public lands in Louisiana had been bought and paid for by the United States from France in 1803, but the lands in West Florida had been conquered from Spain in 1810, and belonged rightfully to the conquerors. This protest was signed by all the members representing any of the subdivisions of the defunct State of West Florida, and among the protestors was the late William Silliman, who represented the district of Feliciana, which has been since subdivided into East and West Feliciana. It is well known that since the establishment of the land offices the Government has sold and given away a large portion of the land conquered by our ancestor, the State of West Florida, which demised in 1812. For that reason the claimants make no reclamation for the identical lands which their ancestor conquered and owned, and transmitted to them by a valid title. Adhering as closely as the nature of the case will admit to the line laid down by our ancestors, the police juries propose to accept restitution in the shape of land scrip; hence it may be logically inferred that the claim for restitution is in no manner affected by the recent acts of Congress granting nearly all the public lands between the Mississippi and the Pearl River to the Backbone railroad, or to the assignee of that collapsed and mythical concern, the Texas Pacific, which has constructed a line of railroad on the western bank of the Mississippi River. But we have, besides our interest as citizens of the United States in the endeavor to defeat this lawless grab upon the public domain, a special interest in holding off the land-grabbers. We have always viewed with distrust large grants of power or wealth to corporations for any purpose whatever except in the matter of railroad grants, in which particular we have reluctantly assented on the hypothesis that it was better to enrich a monopoly than not to have a railroad. But this Backbone grant is not only a stupendous fraud upon the people of the United States, but it creates an overshadowing monopoly in every one of the communities which are now claiming from the Government their rightful inheritance; and not only creates in our midst a monopoly odious to the genius of our people, but it specially devolves upon us to resist the malappropriation of vast bodies of land to which our community has looked confidently to furnish current funds by the sale of the timber to maintain a useful and general system of common-school education, and by the sale of the lands to acquire a fund sufficient for the liberal advancement of the public schools. If there is no power in the Interior Department to right the gross wrong we complain of, common sense assures us that the power which made the grant can revoke the grant, because it was obtained in fraud and because manifestly the transaction is destitute of a consideration. To Congress, then, we now appeal to strike with nullity this most iniquitous transaction. And to the end that our appeal may be properly voiced,

Be it resolved, That the above protest be printed in the official journal of this parish, and a printed copy be forwarded by the clerk of the police jury to the Hon. ED. LEWIS, with a request that he will bring this matter to the notice of Congress properly at its next session; and that a printed copy be similarly furnished to the presidents of the seven police juries which are co-claimants, with a request that they will co-operate with us memorializing Congress; and

Be it further resolved, That the district attorney be requested (if in his judgment such a course of action be practicable) to institute in the name of the people of East Feliciana legal proceedings to cancel the mortgage upon the public domain which has just been recorded in East Feliciana by the agents of the Texas Pacific Railroad.

[Extract.]

POLICE JURY ROOM,
Parish of East Baton Rouge, June 12, 1883.

On motion of Mr. F. Gardere, after the reading of the protest of the police jury of the parish of East Feliciana, relative to the Backbone railroad grant, it was ordered this jury do indorse the action of the said police jury of East Feliciana and join in their protest.

* * * * * * *

ANDREW JACKSON, *President.*
O. P. SKOLFIELD, *Clerk.*

POLICE JURY ROOM,
East Baton Rouge, La., July 19, 1883.

A true extract from minutes of the proceedings of police jury of this parish.

O. P. SKOLFIELD,
Chief Police Jury, E. B. Rouge.

STATE OF LOUISIANA,
Parish of East Baton Rouge:

CLERK'S OFFICE.

I, Benjamin F. Bryan, clerk of the seventeenth judicial district court for said parish and State, do hereby certify that O. P. Skolfield, whose name is signed to the annexed certificate, is now and was at the time clerk of the police jury of said parish, and that the same is in due form and signed by the proper officer.

Given under my hand and seal of office at Baton Rouge this 3d day of September, A. D. 1883.

B. F. BRYAN,
Clerk Seventeenth Judicial District Court.

FRANKLINTON, *August* 4, 1883.

DEAR SIR: At the July session of the police jury of Washington Parish the following resolution was passed, namely:

Resolved by the police jury of the parish of Washington, That we protest in the name of the people of the parish of Washington against the grant of any lands embodied in the area of what is known as the Florida Parish to the Backbone railroad, or to any other railroad, by the United States of America

Resolved, That a copy of this resolution be forwarded to Henry Skipwith, esq., our agent and attorney in fact.

M. J. PITMAN, *Clerk P. J.*

HENRY SKIPWITH, Esq.

As to the allegation that the road was built on the faith of the grant, I have not much to say beyond this, that I have no doubt whatever that these schemers hoped to get the land grant, but I do not find any evidence in the record that Congress, the grantor, ever did one single act to justify them in expecting it. Some years ago the Louisiana delegation promised to do what they could to secure it for the claimant company, and they accordingly did what they could. Bills, for the purpose of transferring the grant to them were introduced in the Forty-fifth and Forty-sixth Congresses. (And here let me repeat what I have already said heretofore, that no bill for this purpose ever was reported to the House for its action beyond the bill reported by Mr. Elam in the Forty-fifth Congress, which was merely reported and recommitted to the Committee on Pacific Railroads, out of which it never came back to the House. I challenge the production of any other report, for I have diligently searched and have not been able to find any.) The delegation tried doubtless to get Congress to transfer the grant, but failed. This foundation of their faith failed them.

They then abandoned further effort in that direction and went to what they and the gentlemen who spoke in opposition to the bill are pleased to call the Government. They speak of assurances given them by the Government, of the official action of the Government, of having built the road on the faith of the assurances of the Government and on the faith of the official action of the Government, &c. They abounded in faith—a faith, I fear, not the "gift of God." But I can not dwell longer upon this. All their dealings have been had with the Interior Department, a mere creature of Congress, and I care not what have been its assurances—what its official action, it has no power to dispose of the public domain except in accordance with the laws of Congress, and whatever they may do outside of its provisions is void.

I could demonstrate, however, were it worth the trouble, that the Interior Department never, prior to the alleged completion of the road, gave them any good reason to believe that it would recognize their demand for the grant.

Let me now pay my respects to the somersault of the gentleman from Illinois [Mr. PAYSON]. I said at the outset that I would show that he had reversed the position he has hitherto taken upon these subjects—that he had hitherto agreed with the majority of the committee, that time was of the essence of these grants.

He is with the majority of the committee on the bill to forfeit the land grant to the Northern Pacific. That bill proposes to forfeit all the land except that lying contiguous to that part of the road constructed within the time fixed in the granting act. The company constructed only 530 miles within the time and 1,340 miles after the time, and yet he votes with us to forfeit all the land opposite this 1,340 miles, on the ground that it was not built in time. (See H. R. 6534 and Mr. HENLEY'S report thereon.)

He is with the majority of the committee on the bill (H. R. 5897) they reported declaring a forfeiture of all the land grant to the California and Oregon Railroad Company, except that part coterminous with that part of the road constructed within the time. (See Mr. HENLEY'S report thereon.) He is with the committee on the bill to forfeit all the land grant to the Southern Pacific of California, except for that part constructed in time, and has been with the committee in every case on this question of time except this case. I might go on and enumerate others, but these are enough. I respectfully commend to his careful and prayerful attention his letter, to be found in the Forest Rambler, his home paper, of April 19, 1884, and which I append:

HON. L. E. PAYSON'S LETTER.

WASHINGTON, D. C., *April* 7, 1884.

MR. GOODELL: I am, as you will see by the Chicago papers, in the midst of the railroad fight, and the burden of it is on my shoulders.

We are having a great contest over the Oregon Central land grant, and expect it to be followed with the other bills on the Calendar, four in number, reclaiming these vast areas of land for the settler, for homes (cheap homes under the beneficent system devised and consummated by the Republican party, the homestead law) for the poor, instead of allowing them to remain as assets in the hands of rich and defiant corporations not legally or equitably entitled to them.

My sense of duty imperatively compels my remaining here at this work, instead of going home to look after a renomination. My interests, after all, in that direction are in the hands of the people, and with their judgment, uninfluenced by my presence, I shall be perfectly satisfied.

I have striven to do my whole duty while here, never allowing any personal business to interfere with my public work. Except when absent on business of appointment for that object, I have never missed a vote or a roll-call since I have been a member here. The special work I have been engaged in shows for itself. I am perfectly satisfied with it, and trust my friends and political opponents as well are content.

This you may say to the convention for me, that I renew the pledges I have made (and I know I have kept) to serve the people of the district and the nation to the best of my ability, and to make the public business paramount, should they deem it proper to extend to me a renomination.

As a matter of personal pleasure, I deeply, earnestly wish I could be present with the representatives of the people at the district convention, but I believe you will all approve my course in remaining here.

Indeed, as the public business now stands on these matters, I would not leave if my nomination depended upon it.

Remember me kindly to all friends.

Yours, truly,

L. E. PAYSON.

Hon. A. GOODELL,
Chairman Central Committee, Ninth District, Illinois.

Was the "burden" too great for the gentleman in this case? I congratulate him, and hope he will give the country a new version of Sinbad the Sailor.

In conclusion, Mr. Speaker, permit me to say that there are over three hundred honest settlers on these lands in my county alone who honestly believe that they have a better right to their homes than this railroad company, and that I believe as they do. I earnestly hope the bill will pass. But if it must be defeated let me ask the gentlemen from Alabama [Mr. OATES], from Mississippi [Mr. VAN EATON], from Illinois [Mr. PAYSON], and all the honorable gentlemen who have spoken and expect to vote against it, to come and go with me to the haunts and halls of the victor, the conquering hero, he who, in my humble judgment, will gather in the spoils of this struggle, Mr. Jay Gould.

The Western Union, his willing slave, will have long since clicked to his ears the glad tidings of success. He will have learned not only the result of the vote, but the names of those who voted yea and the names of those who voted nay. The minutest details attending its passage have not escaped his attention; it is all fully known to him, and doubtless a record made of whatever may be thought useful to him and his confederates in future schemes of personal and corporate aggrandizement.

We shall find him, perhaps, not "arrayed in purple and fine linen," but in the midst of luxurious surroundings. There will be soft and costly carpets glowing with the richest coloring of the Orient. It will give forth no sound from either the footfall of the gentle dame or the lordly master, no warning of coming and going. There will be wainscoated walls inlaid in mosaics of rare and beautiful woods from every clime, all arranged and grouped with matchless skill. There will be plate-glass windows of crystal clearness, artistically draped in curtains of antique design, through which the light of heaven creeps gently in. There will be frescoed ceilings rivaling in their beauty and perfection the highest works of the art. There will be paintings upon the walls, statuary in the niches, paintings from the old masters of priceless value, paintings illustrative of every virtue of the human heart, of peace and plenty, of justice, of mercy, of truth, of charity. There will be wonderful collections of curious things from beyond the seas, from above and beneath the earth, relics rare, mementoes more precious than the gold of Ophir. There will be reclining in old oaken chairs of rich and rare design, around a table blazing with the mosaics of the Old World, Mr. Gould, Mr. Dodge, Colonel Wheelock, Mr. J. J. Flannagan, and Mr. William H. Barnum. There will be a package on this table, curiously labeled:

"Land-Grant Bonds.
"New Orleans Pacific.
"Doubtful."

Listen, now, to what Mr. Gould has to say:

"Gentlemen, the fight is over and we have won. How nobly our friends have stood by us. We must not forget them.

"These bonds, hitherto marked doubtful, are now gilt-edged securities. Before we proceed to a division permit me to thank you sincerely for the energy and discretion displayed in the management of this scheme and especially in engineering the defeat of the bill in Congress.

"I was apprehensive that Senator VAN WYCK at one time would secure an investigation and develop the inward facts, which would have defeated our speculation, but that fear is happily past and we can now

felicitate ourselves upon having secured a bonus of over 1,000,000 acres of the finest agricultural and timber land in the country, worth at the lowest figure $3,000,000. Fill your glasses, gentlemen. Here is to our friends."

A sip or two only of the sparkling fluid is taken, for the division is yet to be made, and each feels the necessity of retaining possession of all his faculties. Even these men watch each other narrowly.

The division begins, bright new bonds slip easily through the nimble fingers of the presiding genius of this conclave, and as they are passed to the one and then to the other, see how the eye of each kindles with unwonted joy; how triumphant the smile that creeps over their flushed cheeks. Silent, erect, intent, each scans the count, unconscious that truth, justice, mercy, and charity, gloriously symbolized upon the surrounding walls by the magic brush and pencil of the old masters, are dumb witnesses of the scene.

Take a final glance, gentlemen of the opposition, at what I have but faintly endeavored to outline. Fill in the picture with all that imagination can suggest or wealth procure; burn it indelibly, if possible, into your heart and brain and then go with me elsewhere. I will lead you to the humble home of the man, and brother shall I say? who wins his bread by the "sweat of his brow." It shall be upon the vast savannas of my native land.

As we approach, on either side will be herds of wild cattle and horses, peacefully grazing upon lands fertile beyond computation, covered with rich native grasses and flowers that fill the air with delicious perfume. There will be in the distance signs of human habitation, and you will wonder why this rich and beautiful land is not crowded with the busy sons of toil. A wide expanse stretches away to the right and to the left, and in front of us will be dimly seen the abodes we seek. Skirts of timber loom up as we advance on either hand as nature's framing to these gently undulating prairies, dotted here and there with rude dwellings inhabited by a peaceable, happy, and contented people.

By devious paths we travel and finally halt in front of the nearest. We dismount, throwing the reins of our bridles over the heads of our horses, leaving them free to graze where they will, for such is the custom of the country. Stop a moment and make a note. Rail fences with stake and rider inclose this quiet home. Pole bars that slip back and forth form the entrance. A small field is in the rear containing the little corn, cotton, and potatoes upon which these people depend for food and clothing.

There will be but one bar up, giving easy access to the premises, for this is one sign of their hospitality. Hatless, shoeless children will be playing in the yard, surrounded in every direction with domestic fowls. They will scamper away as we advance. There will be a tree planted here and there, and a small garden spot fenced with oak pickets near by; the house is rude in the extreme, built either of logs or boards, with one main room perhaps fifteen feet square, with possibly a shed room; a mud chimney; the floor and ceiling of split boards; a ladder in the corner of the room with which to reach the loft; two or three wooden stools, a raw-hide chair, perhaps two of them; a rough cypress table; one bed in the corner, a trundle-bed slipped under it; a cupboard with a small quantity of crockery and tinware, and a wide chimney-hearth, in one corner of which the good wife is seated cooking, or perhaps brewing a cup of coffee.

There are no glass windows, no panel doors, all is built of rude boards on wooden hinges and fastened with wooden latches. As we enter she will glance timidly at first at her visitors, and then bid us welcome. Rising from her chair she will insist that it be taken. Her husband comes in from his labors and greets us kindly. He will ask me with anxious voice about his homestead. Answer him if you have the heart to do so. Tell him that your votes have taken it from him; that you have given it to the wealthy men of the land, to Jay Gould & Co., to the railroad.

Nerve yourselves to the task and tell him further of the scene you witnessed in the division of the spoils; of the magnificent and luxurious abodes of the railroad magnates; of how they felicitated themselves upon their success; of how much they realized. Then watch the face of this honest yeoman. He is but a type of those who bear the burden of your taxation, who fight your battles, whose blood and heroic fortitude won for you your freedom, and whose strong arms are ever ready to be uplifted in defense of their country. Glance at the wife—at the little ones—at their simple household gods—and then pray God to forgive you for the sorrow and anguish you have visited upon this rustic home.

You will have driven the steel into his soul; your hand has been turned against the dearest spot to him on earth. And can you wonder that his hand should be turned against you, against the greed and despotism of wealth? Can you wonder that nihilism, communism, agrarianism is silently taking possession of the hearts and minds of the laboring classes? You dare not say they have no grievance, nor dare you deny that in the oppressions, the insatiate demands of wealthy men and soulless corporations lies the true cause of that grievance.

Contrast the two pictures—put them side by side. Look first at the money kings adding to their ingots amid scenes of royal splendor, and then at the humble cottage of the lowly patriot who, at their bidding, having gathered together his little all, is turning sadly away from the birthplace of his children. Choose ye between them.

Mexican War Pensions.

SPEECH

OF

HON. CASEY YOUNG,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 5, 1884,

On the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war, and for other purposes.

Mr. YOUNG said:

Mr. SPEAKER: I desire to say a few words in reference to this extraordinary bill, giving to the House some of the reasons at least which influence me in voting against it. I do not like to oppose a pension bill, whether for the veterans of the Mexican and Indian wars or for the soldiers who fought in the Union Army during the late war, and any bill based upon a reasonable appreciation of the services rendered to the country by the soldiers who fought in these different wars would receive my support. But in view of what this bill, if passed in its present form, will ultimately lead to, I feel that I should fail in a high public duty if I did not oppose it and point out its ruinous features.

The soldiers of the late war are already provided for by a system of pensions more enlarged and liberal than was ever created by the legislation of any other country in the world. The soldiers of no government were ever so generously and munificently provided for. And this is right. I assisted, and cheerfully, too, in the enactment of some of the laws for their benefit which are now on the statute-books; but I did not then suspect that these laws were but the commencement of a system of legislation that would in the end impose upon the country for the next half century a vast financial burden.

The veterans of other wars have not been so kindly cared for, and now, after long years of neglect and when most of them are in poverty and old age, their condition appeals most strongly for a part of that bounty, nay, that justice, which has been so lavishly bestowed upon their younger brethren in arms. A few of them are my constituents, and have expected me to vote for this tardy recognition of their just claim upon the Government, but they do not, I think, expect me to do so at the enormous cost which this bill would inevitably entail. Whatever may be expected of me, however, in this regard, I could not with my convictions of public duty give my assent to the passage of this bill if it would enrich every Mexican veteran, no one being as anxious as I am to do them a justice already too long delayed. I have no right as a public representative to confer a benefit upon a few individuals at the cost of a sum almost as great as the national debt ever was.

I take it for granted that gentlemen who are so earnestly urging the passage of this bill to the exclusion of all other measures have not stopped to consider what a cruel wrong they are doing the Mexican veterans, and what an enormous additional burden they are endeavoring to lay upon the people of this country, already complaining most grievously of overtaxation. These gentlemen surely do not dream that their unselfish zeal in behalf of the soldiers will, if they succeed in passing this bill, cost the country more than two thousand millions of dollars, but a careful calculation made from the most reliable data attainable shows that this is a moderate estimate, and will most probably fall under rather than go above the real amount which this bill will cost. This will no doubt surprise those who have not examined the subject closely. It startled me when my attention was called to it by one of the most accomplished actuaries and statisticians in this country. I requested this gentleman to make a thorough examination of every accessible source of information upon the subject, and to make a calculation of the most probable cost of this bill. He has given me the data upon which I base the following facts and estimates:

The muster-rolls of the United States Army and Navy show that in the war between the States there were enlisted 2,064,000 men. How many of them were married or had dependent relatives is not shown, to my knowledge, by any published report or document, but the proportion is easily arrived at by an examination of the pension-rolls.

Of these enlisted men 604,000 died or were killed, leaving 1,460,000 alive January 1, 1866. The 604,000 dead soldiers left 307,000 widows who have applied for pensions, as shown by the report of the Commissioner of Pensions. This shows that more than 50 per cent. of the soldiers who died were married. And it is fair to assume that a much larger percentage of those living are married. It can be safely estimated that at least 80 per cent. of the men discharged from the Army in 1866 at the average age of 32 years are now married.

That is to say, there are now 1,200,000 married men who were soldiers in the Union Army. These men die at the rate of twenty to the thousand, which rate steadily increases as they grow older, until in forty years the last will have passed away. Thus the first year after the passage of this act there would be 25,000 widows to pension at $12 per month; the second year the number would slightly increase. In

six years there would be over 200,000 widows on the pension-roll, and the money to be expended would amount to $30,000,000 per annum. In ten years the widow's roll would contain over 300,000 names and would require $45,000,000 per annum. The expectancy of life for these widows, supposing them to average 32 years of age now, shows that at the end of thirty years 50 per cent. of them will be alive and the pension-list then for widows would be reduced to $22,500,000 per annum.

Thus in one year after the passage of the bill 25,000 widows will be entitled to its benefits; in ten years the number will be 300,000, the highest point to which this rule would reach, and the amount paid in these ten years would be $240,000,000. For the next twenty years, when the names on the roll decrease from the highest point to one-half, the amount to be paid out would be $670,000,000 in the aggregate. In thirty years more this "widows' roll" would be extinct, costing during this latter period $290,000,000 more, a total of $1,200,000,000.

This calculation includes children, but not fathers and mothers, and of these there would be at least 50,000, to whom the annual pension in the aggregate would be $7,000,000, lasting ten years and making the total for dependent relatives and widows under the ninth section of the bill $1,270,000,000.

Section 8 provides that any one of these living soldiers who served three months and is dependent upon his labor for support shall be entitled to a disability pension ranging from $24 to $288 per annum. It may be safely estimated that one million of those living will be found to be dependent on their labor, and therefore eligible under the bill as pensioners. The average of the disability pension may be assumed at $12.50 per month, or $150 per year, which is more than $50 less than the present average of pensions, which is $203 per annum. If only 10 per cent. of those living were to apply for pensions, the cost would be $15,000,000 per year. The expectancy of life for a man of 50 years is twenty-one years. This would make the average cost of each of those pensioners $3,150 or $315,000,000 for 10 per cent. of the number of living soldiers. But the records of the Pension Office show that of the 1,200,000 survivors of the war 496,721 have already applied for pensions, claiming wounds or disabilities incurred in the line of duty. Of these 201,111 have been allowed and 66,534 rejected, and 181,608 remain unacted upon.

Pass this bill and these 180,000 applications will be granted as soon as the clerical work can be done, and you add at once $27,000,000 to the pension-roll per annum. If none of the 963,000 discharged soldiers who have not applied for a pension should apply the passage of this bill would add over $600,000,000 to the pension-roll in cases where the applications are already made. But human nature is the same everywhere, and the probabilities are that in ten years more than 50 per cent. of the soldiers who have not applied will apply under this bill and obtain pensions. Suppose 500,000 are put upon the rolls within the next ten years, they would add $1,575,000,000 to the cost of pensions, and it can scarcely be doubted that at least this number will be added.

To summarize: under section 9 we will probably have to pay $1,270,000,000 for dependent relatives, and under section 8 we will have to pay at least $600,000,000, and most probably $1,500,000,000, for disability pensions.

These are facts deducible from the bill and the established "mortuary" and "expectancy of life" tables, and show that the grand total of expenditure which is involved in these sections 8 and 9 will be the enormous sum of $3,370,000,000.

The Commissioner of Pensions, when called on two years ago for the number of survivors of the Mexican war, estimated 36,000 soldiers and 32,000 widows. This estimate, made by the "Carlisle tables," seems rather large. There were in round numbers 100,000 men in the Army that conquered Mexico, and the entire losses did not exceed 20 per cent., leaving 80,000 men of the average age of 28 years discharged in 1847. Climatic influences, added to unwonted hardships and dissipation induced by army service in a foreign country, must have caused a much greater than the ordinary death-rate, and it is fair to presume that 25,000 men and 15,000 widows who have not remarried would be about the number who would receive service pensions under this bill.

The soldiers under this bill average 65 years old, with a life expectancy of twelve years, while the widows average 57 years of age, with a life expectancy of sixteen years.

At a pension of $12 per month nearly $6,000,000 would be the annual addition to the pension-roll, and about $40,000,000 would be paid out before the list was extinguished.

This is but a small sum compared with the enormous expenditures proposed by the eighth and ninth sections of the bill, but the vicious principle of a service pension is established, rendering it certain that in a few years a similar demand will be made for all the soldiers of the late war, and then who can estimate the amount of money it will require to meet the demands of our pension-roll?

I know and appreciate the character of influence that is behind and influencing the support which many members are giving to this bill, and that it is an influence and power that few public men have the courage to defy. But ought we to allow any sort of pressure, however strenuously applied, draw us into the enactment of a law which our judgment and sense of public duty must condemn?

I do not believe the soldiers will want this bill passed themselves when they come to understand the disastrous consequences which it will entail. I can not think that the gallant men who rescued the Government from the perils of civil war are now willing to surrender it wholly into the hands of the tax-gatherer for the next fifty years—for such would be the effect of this bill. We now owe to the public creditors more than $1,400,000,000; add to this sum $3,000,000,000 more, all of which must be paid within the next fifty years, and it does not present a very hopeful outlook to the people, who are now feeling the burden of a taxation too large to be comfortable with probable prosperity. It may and doubtless will be claimed that the estimates I have submitted are too high, but I have considered them most carefully and am of opinion that they are more likely too low. For these reasons I can not give this bill my support, though I should be glad to vote for such a pension bill as the soldiers of all wars have a right to ask for; but further than this I will not go.

Salt in Politics—Its Conservative Quality—Decay of Integrity—Mortmain and Monopoly—Lant-Trust and Restitution—Progress and Poverty—A Time for Reform.

"If the salt have lost his savor, wherewith shall it be salted."—Matthew v, 13
"Have salt in yourselves, and have peace one with another."—Mark ix, 50.

SPEECH

OF

HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884,

On the following amendment offered by Mr. BELFORD to the bill (H. R. 7012) making appropriation for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes:

"For the improvement of Salt River, in the State of Kentucky, the sum of $100,000: *Provided*, That the improvement herein contemplated and provided for shall be completed before the 11th of November, A. D. 1884, so that the Democratic party may thereby have free and easy access to one of the States of the United States they have the capacity to govern."

Mr. COX, of New York, said:

Mr. CHAIRMAN: I do not intend to respond to the gentleman from Kentucky [Mr. WHITE]. His references to Salt River and the necessities for its improvement are facetious, but on a bill of this kind they provoke me to serious thought. He quotes what I said on a former discussion of another river and harbor bill when the present Speaker, his colleague, suggested to me the macadamization of a certain stream in Kentucky, so as to improve its—navigation. I did jocosely propose to make it—a thoroughfare. I referred to the gentleman's colleague then as being opposed on principle to this questionable legislation.

While I admit that the present bill is an improvement on former legislation of a similar character, yet I hope still further to improve it, so as to make it acceptable to those who, like myself, can see no Federal commerce in small local streams, nor any power or place to build canals in a bill for the improvement of rivers and harbors.

But, sir, I rise to moralize somewhat. I desire "special leave" to discuss the conservative elements of salt as well as Salt River. Salt River is not located in Kentucky. It is of wider renown. It is a stream as full of sad meaning to the politician as the Stygian stream to the ancient Greek. It is the route to official exile—exile to Hades—the political *Limbus Fatuorum*.

SALT IN SYMBOLS.

The word "salt," sir, is Aryan in origin. It has preserved its savor on all derivative tongues. Its relation to politics is implied in the word salary. Salt was a legal tender among the Latins. It is an element of the sea as well as of the land. Its function is preservative and purifying. It seasons our food to make it palatable, and our wit to make it pungent. It gives flavor and relish. It is an element of health. It was the ancient symbol of hospitality. From time immemorial, to be placed above the salt at the banquet table was regarded as the most polite recognition of rank. Those who were not seated near the salt-cellar, so to speak, were regarded as servile and mean, and were relegated to the "attic." Therefore, if one means to be self-respecting, it is still said, in the old parlance, that "he never drinks below the salt." Salt is the emblem of purification. The sea is salt over the ruins of Sodom. On the Dead Sea's shore the crystallized wife of the fleeing patriarch became a pillar of salt. How sad her lot!

But, in its most remote and liquid meaning, the word salt implies a retiracy from power, an exile up a stream where there may be no patronage but much repentance. *Hinc lacrimæ!*

UNSAVORY CANDIDATES.

It was remarked by my friend here from Massachusetts [Mr. LYMAN] that he could not sustain certain eminent Republican candi-

dates. They lacked the moral purity by which his independent course was guided. Besides, he added, it is necessary to the health of parties that they should be retired for purification. It was indeed a bad party that exile from power could not help. He meant that a place for Salt River is indispensable in our Federal bill for rivers and harbors, and that it should not be neglected, as it had great utilities. He would therefore enlarge the channel of this national stream, and to its

* * Holy water for lustration bring

the defiled party of moral ideas—and immoral deeds.

Mr. Chairman, my reasons for so often opposing bills of this kind have been freely given. This is a sample of other objectionable bills. Each and all of them should be subject to one test and one rule.

I have served long in Congress. If there be any secret cause for my long continuance in this House it may be discovered in my mode of business.

DUTY OF THE LEGISLATOR.

Let us work by a rule. The office of the law-maker is one of trust. Let us measure its duties by a standard, and determine the trust by its terms and not by loose construction. The rule should not be elastic. It should neither shrink nor stretch.

Whether in benefactions like the life-saving, letter-carrier, immigration, foreign steamer inspection, and other bills; or in economies respecting taxation and tariff; the river and harbor, and other appropriations; or in matters affecting our social and political science, such as the census and apportionment; or as to the relations of citizens—Federal, State, and foreign—my action has been guided by the rigid rule of written law applied to granted power, strictly construed. I have indulged in no excesses, no prodigalities, no compounding or usurpation of powers, no straining after the glitter of national effulgence that would eclipse the more important though less garish system of local and State institutions. Hence, I have tried to lessen the temptations of spoils by reducing Federal taxation, with its alarming and alluring surplus. I would frugally limit appropriations. While allowing luxuries to remain taxed, I would abolish the internal-revenue machinery, with its dangers and wrongs, and reform the tariff so as to reduce and equalize burdens.

LAX CODES AND MODES.

Believing that loose political codes and elastic modes of interpretation and construction, even though not vicious in themselves, create corruption, I shall continue to practice as well as profess these principles. Nor is this a difficult course to pursue, since it has become a habit. Thus practicing, do I not, as a law-maker, represent my party in its best and purest thought, and assist its counsels in this, its crucial year of trial, as it is springing under the popular impulse into promise and power? Do I not thus best represent the people in whose service I have passed so many delightful though laborious years?

The theme suggested so playfully by the gentlemen from Colorado and Kentucky rises into seriousness and dignity beyond most of our debates. It involves the statement that good logic is good morality; that strict construction and trustworthy action in Federal affairs are one; that the evils of time, which threaten to ingulf our best hopes, are the result of the libertinism that comes from disregard of our old codes of faith and rules of conduct.

CAUSES OF DEGRADATION.

Standing as I do to-day among friends who have known me in the two States I have represented since my early manhood; among friends to whom every step of my public career and every act of my private life are as an open book, may I not speak freely of the causes of our present national degradation?

The prime cause was our departure from the landmarks set by the fathers when they established the limitations of the powers delegated to the Federal Government. I yield to no one in devotion to my country. My every thought and wish and act, in peace and in war, has been inspired by devotion to the Federal Union, but I charge that the evils of the times had their origin in the breaking down of these landmarks. The terrible fratricidal war which twenty years ago deluged the land with blood, gave occasion for the exercise of Federal power, which, although necessary and therefore permissible in time of war, grew into excesses and precedents for times of peace.

The Union established by the fathers for the common defense of the States and the general welfare of the people is worth all the bloodshed and treasure expended for its establishment and maintenance. But how long will it be worthy of maintenance if the republican form of government gives place—as it is rapidly doing—to a plutocratic usurpation of all the co-ordinate branches of the Federal Government? Is not wealth, or unscrupulous fealty to corporate wealth, fast becoming the main, the only, and the all-sufficient qualification for the high offices of State—executive, legislative, and even judicial? What has brought about this woful anti-republican condition of affairs? Is it not plainly the continuance of the extravagances of the war times, when the foundations of most of the present colossal fortunes were laid in great contracts and cemented with the blood, tears, and cruel taxations of the people?

REPUBLICAN SPOILSMEN.

While our soldiers were laying down their lives for the Union there remained at home the army contractors and spoilsmen, who for four long years exacted from the people nearly $2,000,000 a day as their pay for devotion to the Union! The service of the contractors and spoilsmen and of the patriots who loaned the Government 30 cents on the dollar at heavy interest has ever been regarded by the Republican party as something nobler and more worthy of acquittance than the patriotism of the people who sent their sons to the field and toiled to support our armies.

Whatever of legislation was demanded by the contractor, the bondholder, or other non-combatant creditor of the nation has ever been most freely granted by Republican Congresses and administrations. We became so inured to Federal taxation and extravagance under Republican administration, that we looked upon an annual expenditure of five or six hundred millions of dollars with far less concern than we once regarded an expenditure of one-tenth such outlay.

Most of the Federal disbursements go into the pockets of the vast army of agents, officials, stipendiaries, and contractors which has been organized by the Republican party in the twenty-four years of its power. It now costs 50 per cent. more to maintain the Federal Government than it does to support the State, Territorial, county, and municipal governments of our thirty-eight States and eight Territories.

If this were the whole cost of Federal rule, the work of reform would after all not be so difficult to an honest party after its administration got into good working order.

THE POWER BEHIND THE THRONE.

But this is not all that a reform party will have to contend against. It must encounter something stronger, something more exacting on the people than the grand army of office retainers in the Republican party. It must encounter a power more compact and wealthy than that of the Republican official organization itself. It must encounter the great unofficial Republican organization of plunderers. This power has grown up within the last twenty-five years under national charters, cash subsidies, land grants, exclusive financial franchises, and the excessive profits of indirect tariff taxations. This army has now almost absolute control of the entire floating wealth of the nation. It has also amassed the great bulk of the fixed wealth, either in direct proprietorship or by mortgage and trust securities.

THE AMERICAN MORTMAIN.

Nothing but the wonderful resources of our rich domain could have enabled the people to support themselves under such long-continued and enormous exactions as those to which they have been subjected during the past quarter of a century. The immense flood of immigration that poured in upon us during that period has helped to develop those resources so rapidly, that to the superficial observer our wonderful achievements over nature seem to be conclusive evidence of general prosperity. You, my friends, who remember the condition of the working people of this country under the old Democratic régime, know how fallacious this view is. You know, from every day's experience, that although our national wealth has doubled, quadrupled, quintupled, during that time, it is not shared by the masses of the people. It has eluded the grasp of its producers, by some sort of sleight of hand. This is incomprehensible to most people. But it is patent enough to even the tyro in political economy that it has been gathered into the coffers of those who own bonds and stocks. It has been sequestered by companies to whom either directly or indirectly have been granted certain State and Federal powers and privileges without any accompanying features of governmental responsibility or control by the people.

There have been opened to the favored few, by legislative grants and by the prostitution of legislative power, the opportunities to organize under the cloak of the law, which enabled thousands of men to become millionaires without ever earning an honest dollar, and hundreds to possess tens and twenties of millions of the wealth we boast of in our statistics.

Thus it has come to pass in this great country of inexhaustible wealth that the masses are miserably poor, that the struggle for existence is daily growing harder for them, and that each year they have less power to control or direct the making, construction, and execution of the laws of this country. Thus it is that wealth—vulgar, coarse, and brutal in its lust, greed, and selfishness—seeks to prostitute every branch of the State and Federal governments to its own ends. It has so benumbed the senses of the people that they have come to that condition in which they scarce think of the possibility of electing a Chief Magistrate, Senator, or even a Representative to Congress who is not either a millionaire or the boudsman of a great corporation. What a humiliation it is to be compelled to acknowledge such a falling away of patriotism! Are we worthy of the liberties won by our ancestors?

THE DECLARATION OF LIBERTY.

We are approaching the one hundred and eighth anniversary of their day of independence. Let us revive some of the old spirit of the fathers.

Our ancestors never made a declaration of liberty against the tyranny of money. They never dreamed that their sons could become the slaves of such a power.

We are still a free people; hence we should be ruled by ourselves. But how long will the institutions of our fathers, honeycombed as they now are by fraud, permeated by selfishness, and putrescent with corruption, remain as the witnesses of the heroic struggles of a hundred years ago? What are magna chartas and bills of rights and muniments of personal freedom, the grand incentives to public content and private fortune, when the air is fetid with poison and the Government has degenerated into a moneyed cabal?

THE NATAL DAY OF INDEPENDENCE.

Our fathers were wont to celebrate the natal day of American independence as men whose glory it was to feel and know that theirs was a land of liberty and plenty; a land where poverty and riches were alike unknown; a land where the people ruled; a land where patriotism, moral worth, and intellectual power were the only sure passports to popular favor. What changes have been wrought among us in a few short years—in the flight of a single generation! Then, we were in very truth a commonwealth; now, we are a nation, with rulers set over us. Then, "our country" was the theme of all our eloquence, and liberty our highest aspiration; now, a most ignoble ambition is eminent and dominant. It rules the press, the pulpit, and the arena of politics. I mean the inordinate desire for wealth, that scruples at no means, however dishonorable, that will secure its gratification even at the expense of the general prosperity. The frequent acquisition of sudden wealth, which was so notorious during the late war, seems to have developed among us a spirit of insatiate greed.

SPECULATION AND BUSINESS INTERESTS.

Is it indeed true that "money answereth all things"? Is it indeed true that our country has "waxed fat and kicked"? The acquisition of wealth by sinister methods, in the marts of money in the great metropolis, at 20 per cent. a month, is but one of many recent developments leading up to the craze of speculation and the insanity of gambling. Is it true that the old prudence, which is itself a virtue, the heroic loyalty to conscience, and the faith in a Supreme Ruler have given way to the self-seeking promptings of inordinate gain? The panics in our streets and the prisoners in our jails are living illustrations that the Pecksniffs are not all gone; that the Pharisees are yet making broad their phylacteries.

It is true that our civilization creates many wants, many temptations. It has taken hold of the people; it moves them to the front; it engenders a desire for luxury and prodigality which too often benumbs the scrupulous moral sense in the hurry for the attainment of wealth. The ambition to become rich has tainted almost every department of social life. It has become the common incentive to almost every financial fraud and crime. It has been left for this summer and New York city to show us how "business interests" can be transformed and developed in a way never before defended in the forum of conscience. Whether in the daily investment of capital or in the increase of professional practice, adventurers of all kinds seek, with fair prospects of success, to reach social standing by the prostitution of trusts. The great mass of society in the cities has been leavened by this most undesirable element.

MERETRICIOUS CANDIDATES.

In the selection of candidates for the highest trust known to civilization the eyes of the people and their delegates have been blinded by the dazzle of wealth. They fail too frequently to see that the methods of gain, however successful, are not always such as comprehend justice, the dignity of mankind, or the brotherhood of the nation. In other words, the pleasures of social and sensual life have become so paramount as to allure the imagination of the people toward the exaltation of meretricious splendor and sensuous display over modesty and solid worth. The self-styled "party of moral ideas," which boasts of the culture of the schools, of the higher thought, of the finer feeling, of the nobler ambition, and of intellectual exaltation, has long since succumbed before the insolent plutocratic assurance which undertakes to record in advance of the ballot the people's verdict at the polls

How long shall such methods of intrigue be allowed to manipulate, bargain for, and capture the highest candidacies of the Republic? How long is this party of wealth, hypocrisy, chicanery, and fraud to administer the public trusts?

REVIVE THE OLDEN SPIRIT.

Upon the recurrence of this patriotic season, made memorable by the self-sacrifices of patriots, who pledged fortune, life, and sacred honor to maintain their independence and confirm their liberties to posterity, it is especially becoming in us to determine that extravagances and glitter, epicurean luxuries and treacheries, financial and political frauds shall receive the condemnation which righteous indignation and common honesty should heap upon them. It is especially fitting that we should commend that enthusiasm of patriotism which over a hundred years ago consumed in its wrathful fire the miserable selfishness of men, gave revival to conscience, and shone like a precious gem in the crown of Liberty. To despair of one's country is dastardly. He is a graceless son who will not aid his mother in her extremity. More need then of hopeful, helpful, invigorating works.

If there be one way more than another in which popular sovereignty may be overthrown most speedily and dishonored most ignobly, it is that by which our public service is made the feudal retainer of corporate wealth and the goal of spoilsmen intent, only on private aggrandizement. It is a sad day for our country when a small coin no larger than one's eye is brought so near to constituent and representative that its disk shuts out the whole horizon of social and political life. The history of nations shows that it is not impossible, by absorption in one ignoble pursuit, to lose that spiritual vision which gazes undazzled at the full noonday radiance of alluring ambitions. How hard for man to resist temptations when such as now allure were even offered to Divinity itself.

I am not as one without hope. We have not all bowed the knee to Baal. I feel that I am among men who are not altogether engrossed in the pursuits of avarice; men who engage in daily toils and nightly meditations that are more attractive than the chink of silver or the rustle of greenbacks; men who can enjoy books more interesting and inspiring than the ledgers of the counting-room. Thank God, we are not yet as a nation altogether bankrupted in patriotism and selfish in greed.

JUDGE CANDIDATES BY THEIR LIVES.

In a year like this, when we should select our leading officers—Federal, State, and municipal—with a view to the general welfare, is it not our duty to inquire into the causes of the untrustworthiness which has become all too common in public and private administration, in order that they may be removed by such an exercise of long-outraged and indignant suffrage as will tend to exalt honesty over greed? Our newspapers are full of the catalogues of speculative liabilities, aggregating millions in amount. They are full of the long lists of stocks and bonds pledged, or purloined to be pledged, in dishonest schemes from which thousands of innocent people have grievously suffered. The ventures pertaining to some of these peculiar transactions have come very near to my own city and the Federal Government. This startling array of fraud and speculation is a warning against the selection for high public trusts of mere "business men." Their political and financial trustworthiness has not stood the test of public scrutiny.

Blackstone said that it required thirty years' study of the law in order to become so imbued with its principles as to be qualified to administer it in the courts. There is great wisdom in this view of the learned commentator. No man can be a student and practitioner of law for thirty years without having established a well-deserved reputation either for integrity and ability, or for dishonesty and chicanery, or for honesty and mediocrity. The same is true of persons who have held offices of honor, profit, or trust for any considerable time. Their acts and modes of life are the fruits by which they are to be judged. Judging candidates for offices and trusts in this way, and giving our suffrages to the competent and worthy only, would soon bring to us the reform we so sadly need. I do not concur with those who would regulate our State and Federal administration on "business principles." I desire a higher standard in our public agents than that of mere faithful employés and wage-earners. I would have no offices of profit. All should be of honor, trust, and modest compensation, and filled only by those of proved ability and integrity. I would make office-holding not merely an educational reward, but an award of civic honor to patriotism, capacity, and unquestioned integrity. Especially would I demand such qualifications in the legislators, the judges, and the more important executive offices. The minor offices, like the streams from pure or turbid fountains, will partake of the translucence or the tinge of the sources from whence they flow.

TRUE CIVIL-SERVICE REFORM.

If we had such a civil-service reform as this, would there be the place-hunting, the arrogance and riotous display of wealth by men in public stations that is such conclusive evidence, in thousands of cases, of the ill-gotten gains that grow out of corrupt contracts for public service, barters of political influence, embezzlements, speculations with public moneys, and other breaches of official trusts? Every fifth year the ancient Romans had their *lustrum*—their year of purification, of census, of apportionment of public burdens, of accounts of stewardships. How long has it been since our nation had its lustrum?

It is an old rule of Democratic faith that the money of the people should not be deposited in banks designated by officers, to be trafficked in at pleasure and tempt to speculations that end in bankruptcy. The subtreasury system of the United States grew out of this jealousy for the safe-keeping of the public funds. How the times have changed. Not long since a bank in New York city had in its vaults, by permission of a Secretary of the Treasury, securities and moneys of the United States resulting from securities amounting to nearly fifteen millions, free to speculate in, without any bonded liability to the Government in case of loss. I will not assert that this was the result of a corrupt bargain; but I will say that such questionable conduct in an office of great public trust should be regarded as conclusive evidence of want of virtue in the incumbent. It is sufficient ground for divorce from the public service. It is only a matter of good luck, perhaps, that in the case referred to speculation did not run so high as to have absorbed or sunk the millions deposited.

THE GENERAL DISTRUST.

It is a matter of sadness for many a stockholder that a shrinkage of

ten millions occurred the other day in one of our railroads, for which there was no compensation in the shrinkage in value of a millionaire's assets of twenty-three millions. A depreciation of forty points on twenty-five millions of bonds, equal to ten millions of shrinkage, not only affected by its reaction other investments at home, but in the present condition of freightage proved a terrible blow against the prosperity of railways, their operation and extension. It begat in foreign investors distrust of American securities sudden and disastrous.

Are we to learn, under the untrustworthy associations of to-day, the lesson that no confidence can be placed in any man, however high or proud? The game of hazard has been often played by men of high social standing, in cotton and grain, in clothing and food. Speculation has run riot, loans have been shifted, and business disturbance become turbulent. The banks that are now maintained for the purpose of giving a safe and uniform currency to the people at a cost to the tax-payers of from 2.70 to 4.50 per cent. of their issue have become so tainted by participation in these transactions that Congress is now seeking to learn something about the unsound condition of their reserves and securities. The people demand to know why the recent enormous shrinkage in values has begotten such a shrinkage of confidence in respect to all financial operations.

VARIETIES OF FRAUD.

Army officers duplicate their pay until the son of Lincoln loses patience at their petty devices of fraud, and court-martials are called too late. Armory contracts display frauds. We see fixed returns of the rotten railroads that owe the Government moneys not computable. Our Land Office shivers under 600,000 pending claims for 7,000,000 acres of public lands, mostly claimed by land thieves. It is not alone the starry route, and vast largesses in the elections of 1880, nor the use of money to buy mercenary delegations at Chicago. It is not alone that the Government seeks to hide its schemes of aggrandizement under secrecy, so as to disburse a quarter of a million to the congress and newspapers of Central America for private ends and canal projects. It is not alone the acquisition by hook and by crook of 20,000,000 of acres of our soil held by foreigners. It is not alone giving to France and England control of our isthmian routes. It is not alone the system of absentee landlordism that exists in Dakota and other Territories to blight our heritage as it has blighted the fertile fields of Ireland. It is not alone the railroad wrecker and repudiator who strove to wrest Old Virginia from her ancestral politics.—These and the thousand other frauds wring from such Republicans as George William Curtis the following confession:

> Honest and economical administration, peaceful and honorable foreign relations, the progressive purification of the public service at home, wise reduction of the revenue, and that sense of general security which springs from the moral elevation of the administration are not to be expected from Republican success.

THEIR NAME IS LEGION.

A clerk has lucky speculations among his Norwalk (Ohio) neighbors, while pocketing fifty thousand of their earnings. A railroad magnate mismanages his road between Nashville and Louisville, but manages to get caught on $200,000 restitution of unlawful funds. Insurance rogues deal with Death, and call in the gospellers to help his claims. Suicides become common, and the coroners find—"deficits." Even staid Boston has her scandal of gas bribes to senators for their votes. Poultices and plasters help the weak, bail bonds and Government counsel help the wicked. The outcasts of dishonesty base all their hopes on the possible election of a Republican candidate. Yet this dark cloud has some silver lining—a few earnest and honest Republicans protest.

What, asked an English paper, makes the American a more dangerous gamester than the Frenchman or Englishman? This was its answer:

> What, indeed, is ruin in that exhilarating air, with nobody caring, and thirty-six States around you offering to the skillful thirty-six thousand ways of making money? An attack of dyspepsia is far worse; and, in fact, when a prominent American is ruined we generally hear that he is "sick," and that his friends upon that account are full of anxiety for his future.

THE SPIRIT OF GREED.

What cable can tether or chain bind this spirit of unholy greed in private and public life? Whether in the cañons of the Colorado deep down below the sound of human woe, or within the rocky volumes of the geologic and prehistoric eras, where the simple Zuni worships like an Oriental, or upon the unctuous soil of the Indian reservations, where the red man imagines that he is located as long as grass grows or water runs, this spirit of greed is there, rolling arable acres as a sweet morsel on its tongue. It hovers over the splendid Yellowstone Park, where the laboratories of nature are producing by their perpetual chemistry the weird wonders which the pencil and easel of Durant have made familiar to us. Go to the uttermost parts of our land, from the Téche, where the alligator fights the sugar planter with a show of teeth not unlike his own tariffs, to the Red River of the North, the vales of Montana, and snow-capped, verdure-robed cascades of the far Northwest; and lo! the greedy spoiler is on the wing—prospecting, engrossing, and blighting our fair domain, the heritage of our children's children!

THE DECAY OF INTEGRITY.

All these matters can be referred to the decay of integrity in politics, business, and society. A few days ago the criminal judges of New York city delivered charges to the grand jury in which they commended our police and our criminal jurisprudence. They said that the persons and property of our people are protected from the ordinary felon and bully. This is undoubtedly true. Reasonable protection has been given against the common robber and burglar. Even the bunko men and other vagrants have been apprehended in their petit larcenies. But the many instances which occur to you in New York city, as well as in other cities—in Pittsburgh and Newark—show that the rottenness of our society prevails not so much on the outside as inside of our institutions. For example, there was the Penn Bank, named after the mild and honest Quaker of Pennsylvania. It had provisos against any stockholder or officer being liable or assessable for an amount greater than the face value of his stocks. It received deposits by the millions. The other day the depositors found little or no assets and two millions of their money gone! Better than burglars' jimmies or outsiders were the insidious banker's instruments of wholesale robbery in Pennsylvania. Such instances of plunder are more emphatic in producing industrial depression than your masked tariffs and taxations. How was the collapse of this bank managed? By fictitious entries of deposits. This bank, like others, became simply a medium of respectable rascality. How much of a dividend will the little remnant of assets give the depositors? Who among the gang of defrauders will wear the striped clothes of the penitentiary? Men like Vanderbilt masquerade upon the books of the bank, and oil speculations gave lubricity to the slipperiness of its officers.

It is no satisfaction to know that the fiduciary guardians of the West Side Savings Bank, with its disappearing cashier, lamented in deepest sorrow the necessity for suspension. They regretfully closed the doors against the men and women who sought the hard-earned money they had deposited with them. It is no satisfaction to know that the stock exchange is excited over the tumbling down of gilded hopes. How sad that the head office of Jerry McCauley's Cremorne Mission is now vacant for another Wall-street saint! It is little satisfaction to know that it is easier for such rich men to go through the eye of a needle than to enter the kingdom of heaven.

LEGALIZED GAMBLING.

Much has been said by purist committees of State Legislatures about the prevalance of gambling houses in our great cities. It seems to have been overlooked that these houses exist by reason of the insatiate craving created by the business of the exchange; for what is its business unless it be betting on the price of stocks under the pretext of purchase? Faro is respectable and poker courageous in comparison. In these games other people's money is not always risked. The law may make a difference between these and other games of chance, but as between a bucket-shop and a put-and-call establishment, as between a margin-dealer and a roulette-player, there is little or no moral difference. If there be any, it is in favor of the bucket-shop and the roulette-wheel. It is this passion for gambling that is at the bottom of the methods of the conventions and the street.

To these methods may be attributed the cause of much political baseness and social decay. The capitalist who deals in futures is in some respects better than he who speculates, to the ruin of innocent families, with money not his own. Yet both are gamblers. Embezzlement, fraud, defalcation, theft, all the phases of financial crime are begotten by this illicit passion for gain. As the cause of causes, this passion is more harmful than all the other business schemes of men who seek to engross the patrimony of the young and the honest earnings of the old. The time may come when the now respectable dealers in these games of chance will be branded as destroyers of families, and their operations be condemned as incentives to unlawful speculation. So long as these games of chance are conducted as legitimate business by the pious and devout, by the long-faced hypocrites and Tartuffes of society, just so long should wealth so gained be regarded with scorn and indignation. Is it from this school of gamblers that we are to take lessons in "business methods," administration, and public policy?

OUR WEALTH ENGROSSERS.

Time was, at the beginning of this generation, when the property of the country was more generally shared by the people than now. There was then not so much value per capita in the country; but the people were more contented. There was then little of private defalcation and less of public dishonor. Now we have our Goulds and Vanderbilts and others who engross most of the wealth of the nation. No one is considered in the roll of wealth to-day who does not list his property by the million. The vast assets of our great millionaires were accumulated, not by the ordinary rise of values incident to our industrial developments, but by the watering of stocks, aided by corrupt courts, the subtle artifices of bribed legislators, and combinations organized for the spoliation of honest stockholders.

It is not worth while to speak to you in detail of the enormous swindles, heaped like Pelion on Ossa, by which hundreds of millions of ill-gotten gains have been accumulated in the hands of a few financial conspirators. Perhaps the remarks already made may be sharply criticised because they relate to private and not to public matters. My answer to this is, that when business men, so called, who are supposed to manage and control the great interests which center in our metrop-

olis and involve the prosperity of the whole country, join in demonstrations of a political nature, it is well for us to learn how far their business interests go into the field of politics. The dashing Ward, the festive Eno, the pious Hatch, the humane Seney, the devout Bogart, and the godly Gould all join in an apotheosis to the Republican party, as if they were worshiping devoutly some emperor lavish with the plunder of the nations. These worship at the Republican shrine with the same reverential awe as the Dorseys and Elkinses of the postal Milky Way. The big king of the gambling financiers himself rushes into print to hail the Republican nominee as "a live man," "a live President," as "abreast of the times," "the man who never allows himself to fall behind a single step," "a man for the place." Many such "business men" are so high above the people that they ostentatiously avoid being contaminated by association with industrious men who vote the Democratic ticket and marshal under our banner.

THE UNION LEAGUE DICTATORS.

These and other Jeremy Diddlers of the Union League, who assume to be the best society and falsely claim the highest culture, might well be spared from the arena of politics which they befoul with their unsavory presence. Let us endeavor to teach fiduciary agents something of that fidelity which would come from the rule of honest labor and Democratic practices. They and their brethren of the street should learn something of the philosophic wisdom of Jefferson, the economic frugality of Franklin, and Jackson's contempt of mere money-mongers before they presume to dictate to honest citizens whom they shall elect as Chief Magistrate. These gamblers in millions are fit associates perhaps for the official pirates who ran New York city in 1872, and who were always promptly at the front of the citizens' movement for reform. These are the "reformers" who gloried in the Sherman and Hayes administration of 1877. The speculators and bankers who gamble on the earnings of the poor; who feather their own nests by treachery and falsehood; who buy and sell what they do not have; who make bread and coal dear by secret combinations; who deify successful political profligacy; who would exclude honest merit from social position—are these the men by whom reproach can be cast upon those who seek to make society honorable under the pure teachings of Democracy, and the nation worthy of its founders?

The example of these gamblers for wealth is followed not alone by the confidence-men who will meet you in our avenues and squares, not alone by the agent who may collect money in the name of the Goddess of Liberty and the Bartholdi statue, not alone by the clerk who robs his employer to gratify his lust of gain, not alone by the cashier or the president of a bank who breaks faith with those by whom he is trusted, but, alas! also by men who have obtained leadership in the great sanhedrim of political organization. Thus the decay of our integrity, beginning with the very fruit and flower of our system, extends and ramifies its blight into every social and political institution all over our land.

A TIME FOR REFORM.

However numerous the modes of deceit and the practices of fraud may be, however demoralizing the prostitution of official trusts by public officers and corporate and other managers, we might still be able to bear and forbear if the consequences were limited to the records of detected frauds; but when fraudulent quotations make the prices of our bonds speculative, it is not to be wondered at that other restrictions of honest business modes have been removed, it is no wonder that hypothecations and sales of borrowed property have been made by respectable financiers who oppose legal restrictions upon their private business conduct, and complain that it is not the concern of the public to restrain speculation by law. The pools which defy and set at naught the honest enterprises of industry and trade and depress or enhance values at pleasure might be of little moment to us if they only affected the private interests of conspirators; but when great public interests are injuriously affected, when the whole market reeks with deceptive and fraudulent deals and quotations the moral atmosphere becomes equally tainted, and industrial prostration, bankruptcy, and other evil results follow. When these are the results is it not time to attempt some public and business reforms? Is it not high time to attempt some reform when a great political party in its candidacy for the most honorable office in the gift of the American people enthusiastically nominates for that high estate a candidate of whom it would be mild language to say that he is reasonably suspected of acquiring vast wealth by the prostitution of great official position and influence?

Allow me to make some pregnant illustrations of what I have said. They are in reference to corrupt and demoralizing combinations which cause much of the decay of integrity both in business and political relations. And first, as illustrated in the grasping monopolies under our tariff system; and second, the grasping combinations and pools not originating in the tariff.

THE OLD TARIFF THEORY AND THE NEW.

The old theory of protective tariffs was based on the idea that as the countries of the Old World had great knowledge and experience in the manufacturing arts, some special favors should be extended to persons on this continent. This was to be done with a view to enable and encourage them to develop manufacturing industry. It was not until after many years that the question of protection of wages entered into the tariff policy. The larger the growth of our manufacturing industry the more important became the question of wages.

The original theory vanished long since. It vanished because it is now admitted on all sides that manufactures are so firmly established among us that, so far as tariffs are concerned, the laborer is the only party who needs protection.

Then it follows that the laborers in our shops and factories are the only parties who have any proper interest in the maintenance of high tariffs. The question is, Are they the beneficiaries? I hold that they are not; and therefore I hold that the operations of the tariff laws are unjust. These laws are oppressive to the full extent of their indirect taxation. Show me that these laws are beneficial to the mechanics and other laborers, and I will advocate a tariff for revenue so adjusted as to enhance as much as possible the rewards of labor. I will do this even though the tax weigh heavy on the whole people, if I have constitutional power.

We have the constitutional power to raise all our Federal revenue from the customs; but to do this we must import manufactured goods. We have no constitutional power to enact a law that is ostensibly declared to be a revenue measure, but in fact the opposite, a prohibition of importation, and hence in its operation a restraint on exportation. Our people can not engage in the latter without practicing the former.

The Constitution forbids the taxation of exports, much more the larger measures of prohibition. The reason for this is that foreign markets are a prime necessity for the maintenance of our farming interests. The more these are developed the greater the necessity for observing in good faith this wise restriction on Federal power. If we adopt the policy of the advocates of high tariffs we must favor legislation that is forbidden by the Constitution. We must restrain exportation. We must to that extent restrain the development of our greatest industry, agriculture. Would this be wise?

RESPECT FOR THE CONSTITUTION.

I have never known an instance of unconstitutional legislation proving beneficial to the people. Bad logic is bad law. All our legislators are sworn to obey the Constitution. We are bound to respect its spirit as well as its letter. I believe in commerce because of its benefits. All the more do I believe it my duty to foster commerce, because that is a duty imposed upon us by the Constitution, which we have sworn to obey.

The very fact that the protection of wages was never in the early days of the Republic considered as being within the scope of tariff legislation, and that the heavier the tariffs the more talk there was and is of the necessity for protection of wages, is strong evidence that the operation of a tariff is inconsistent with the theory of its advocates. Why, then, do these men insist that there shall be free trade in labor, and that we should violate our oaths by imposing unconstitutional restraints on the large business of exportation? Is it because the labor in our mills and factories is benefited?

AN EXPOSURE OF THE TARIFF FRAUDS.

In my addresses to Congress this session on the tariff question I proved by the official figures that under the tariff laws of 1880 the average wages in our manufacturing industries was $1.16 a day for three hundred working days in the year, while at the same time the average profits of the manufacturers were equal to 36 per cent. of their invested capital. I also proved that the indirect taxation of the tariffs reduced the purchasing power of these wages at least 40 per cent. This, in connection with the well-known fact that employers are ever on the alert for cheap labor, is conclusive proof that they are not interested in maintaining high wages.

Why, then, do employers demand high tariffs? Why do they organize lobbies to prevent the reduction of tariffs? Motives of philanthropy are not the inspiring cause of these lobbies. I will show you the cause of their efforts in the sacred name of labor—as I exposed it in my last address to Congress on this subject. It is the insatiate greed of wealth. I thus exposed it. I thus proved by cold arithmetic the extent of the tariff robbery:

THE EVIDENCE OF TARIFF ROBBERY.

First. I showed by the figures of the Tenth Census that the profits of manufacturing capital for the year covered by the official returns amounted to $1,024,801,847, a sum equal to between 36 and 37 per cent. of the capital employed. I showed that if this profit had not exceeded 10 per cent. there would, at the wages paid, have been a saving to consumers of $745,774,587; that this sum would have paid all the State and local taxes and still have left to the credit of the consumers $443,573,863; that the latter sum, saved annually for six years and invested in United States 3 per cent. bonds, would amount to $2,861,051,610—a sum $70,779,004 in excess of the total capital invested in 1880 in the manufacturing industries of the United States; that this six years' savings would pay off all State, Territorial, county, municipal, and other local debts, and still leave unexpended $1,804,645,402; that this six years' savings would exceed by $247,445,346 all the paid-up capital of all the railroad companies in the United States in 1880; and that six years more of such savings would pay off all the

bonded and all the unfunded debt of these railroad companies, as reported in 1880, and leave an unexpended balance of $48,935,314!

Second. I further showed that the total amount of wages (including salaries of officers and clerks) paid in 1880 in the manufacturing industries was $947,953,795; that on a 6 per cent. return to the capital invested the manufacturers could have paid, in 1880, to their employés 90.45 per cent. in excess of the wages paid that year; that on a 10 per cent. return to the capital they could have paid their employés 78.62 per cent. in excess of the wages paid that year; and that they could have paid from the returns accrued to their capital in 1880 all the State, Territorial, county, and municipal taxes, and 46.79 per cent. more wages to their employés than they did, and still have a return of 10 per cent. on the capital employed in their business.

THE ANNUAL CONSCRIPTION.

As a 10 per cent. return to capital was liberal in a year in which money was freely invested in Government bonds bearing low interest, I charged that our tariff-protected manufacturers were engrossing the wealth of the nation at the rate of $745,774,587 per annum, while labor was receiving the bare pittance of $1.16 a day—equal only to 75 cents in purchasing power! I say now, as I said then, that it was this annual conscription of the national wealth that capitalized all the other exacting monopolies. And yet the Republican party dares us to attempt tariff reduction. It challenges the Democrats to make this an issue in the approaching political campaign.

It is this system of tariff concentration of our great and enormously increasing national wealth that the great bulk of the Democratic party is opposed to. It is this system that the Republican party is as determined to maintain.

The evil effects of tariffs do not stop at the iniquitous exactions from the people, the incident paralysis of industry, and the degradation of labor. The moral tone of our society has been debased by this open legalized system of robbery which is unblushingly carried out under the most transparent veil of hypocrisy that ever disguised a fraud. When I see so plainly this tariff monstrosity, my wonder, my indignation arises almost as much against the blindness and stupidity of the grossly defrauded laborers who adhere to the party that legalizes their robbery and enslaves their children, as it does against the robbers themselves.

ASSOCIATIONS FOR PLUNDER.

The great manufacturers are associated for two purposes, yea, three, namely:

First. To maintain high tariffs.

Second. To maintain high prices for their products.

Third. To reduce wages as low as possible and to prevent any and every organization of labor, social, industrial, and political, that would tend to defeat any of these objects.

Any young man of talents and brilliant qualities as an advocate can enter the service of these associations with reasonable prospect of high legislative position, if he has sufficient elasticity of conscience to yield to their seduction.

Wealth commands talent. Wealth is "the daughter of the horseleech, crying, 'Give!' 'Give!'" "The grave and the barren womb, the earth that is not filled with water and the fire that saith not, 'It is enough,'" are not more insatiate than the tariff spoilers.

Surely of their generation was spoken the word of Agur, the son of Jakeh, even the prophecy: "There is a generation, whose teeth are as swords and their jaw-teeth as knives, to devour the poor from off the earth and the needy from among men."

I would remind the incorporated devourers of the poor who, like "Hell and destruction, are never satisfied," that "He that hasteth to be rich hath an evil eye and considereth not that poverty shall come upon him;" "He that is greedy of gain troubleth his own house." I would tell them: "Better it is to be of an humble spirit with the lowly than to divide the spoil with the proud;" "Better is a little with righteousness than great revenues without right."

When I see the corrupt methods of the corporate and tariff spoilers, the social and political degradation that they have brought upon us, I thank my God for having directed my steps away from those who haste to be rich on the unrequited labors of the poor, and for enabling me to preserve in thought and deed true loyalty to my oath and the Constitution in the halls of legislation.

It is this ill-gotten tariff wealth that has caused the decay of integrity in our business and political relations and fostered the development of other monopolies. It was amassed in fraud of the people, by modes that have cast reproach on the legislative branch of our Government. It has long controlled legislation and made the way easy for many violations of the Constitution in the name of national developments.

THE PUBLIC LANDS TRUSTS.

The lands transferred to the Federal Government in trust for the people by Virginia and other of the old States that formed this Union and those subsequently acquired were long regarded as a sacred heritage. This trust was fairly guarded until the high-tariff party obtained control. Then it was that the policy of lavish grants to railroad corporations came in vogue.

From the year 1864 to 1875 the Republicans had full control of both branches of Congress. In the House of Representatives Schuyler Colfax was Speaker from December 7, 1863, to March 3, 1869. For six years thereafter the present nominee of the Republican party for the high office of President of the United States, a gentleman of still more unsavory fame then his predecessor in the Speakership, presided in the House.

In the eleven years following 1863 Republican Congresses voted 296,000,000 of acres of our public lands to a few corporations, in addition to millions upon millions of public money. Very much of the latter was used as a corruption fund for members who were in haste to be rich. These grants exceeded in area that of all the farms in the United States in 1880; exceeded it by many millions of acres. They exceeded by 75,000,000 acres the area of the thirteen original States. This empire, equal in area to fifteen average States of the Union, was vested in the possession of a handful of millionaires who now wield the full political power of at least that number of States.

Is not this another illustration of the monstrous combinations of monopolies? Have not these caused the decay of political morality? Is not the gambling in stocks secured by these infamous grants another illustration of the decay in business morality? Do you ever stop to consider the effect of these stocks, both direct and indirect, as an obstacle in the way of the attempt made in Congress to make some restitution of the lands despoiled from the people in violation of a most sacred trust? If you do, you will begin to know something of one of the causes of the decay of integrity that is second only to the tariffs in its baleful influences on public and private morality.

THE FALSE REPUBLICAN PLATFORM.

We have created our masters—our task-masters. They dictate our laws, our tariffs, our wages, and our rates of transportation. They scarce allow us straw to make the brick for their pyramids of wealth. Their greed is only equaled by their effrontery. The climax of their audacity is the last Republican platform, hung with false lights to lure the people to their wreckers.

When will labor arouse from its lethargy? Is there any haven for it in the Democratic party? If not, farewell to the Republic of our fathers. But I do not despair of the Republic. When our people begin to discuss the tariff policy their natural quickness of perception and good sense will soon bring them as right on this question as they are on the other monopoly issues.

The genius of greed needs no legislation to foster its passion. If I could make the law, my aim would be to render it impossible for any man to accumulate a million dollars while labor was glad to earn a dollar and sixteen cents a day the year round. While this condition of industry remains, the fraud of tariff protection is patent and corporate enterprise is robbery.

If you would have progress, prosperity, virtue, and reform, your representatives and officials must not be hirelings of millionaires or directors of corporations. Ye can not gather figs from brambles nor grapes from thistles. Holy Writ says, ye can not serve two masters. Ye can not serve God and mammon; neither can your legislators nor executives nor judges. They must hate you and love mammon, or else the reverse.

If such be the political ethics and practice as to political economy in our public lands, you will not wonder that the laboring man is poorly recompensed for his day's labor, and that even the Scotch crofter and the Irish tenant, oppressed as they are by harsh laws and avaricious landlords, begin to hesitate about yielding to the attractive forces of that emigration which has filled our shores.

REPUBLICAN PHARISEES.

You have read of the Pharisee who thanked God that he was better than other men, therefore you wonder not that even the Republican platform-makers assume a virtue which they have not in resolving against the consummation of their own land thefts and the turning over to foreigners of large areas of our public domain. You need not wonder that our nation has become a shipless one under the rule of such a party.

With such examples of corruption as those furnished by the Republican administrations you are not surprised at the testimony given before our investigating committees as to the inutility and perfidiousness of the "star-route" prosecutions. Even the bar, not to speak of the jury, are tainted by the order to "let Dorsey and others go." Are you surprised that a leading Republican paper in 1883, despairing of any reformation under a Republican administration, cried, after the acquittal of the Bradys and Dorseys, "Turn the rascals out." Was there ever a shame equal to the Republican mode of prosecution or to that verdict of acquittal? Was there ever a cause for public shame equal to the impudence and arrogance of those other rascals who, never acquitted because not indicted, have undertaken to make nominations for the American people to fill the highest offices of trust? If it be impossible to find a jury in Washington to convict representative Republican statesmen in such palpable cases of grand larceny, can we expect that the smaller thieves, the Howgates and the Burnsides, will not go acquit of their crimes and unwhipt of justice?

TURN THE RASCALS OUT.

The business methods of the Executive Departments under Repub-

lican administration are very like those of the many robbed and broken banks. The accounts of the paymaster in the Post-Office Department had not been audited for three years; and though the amount of peculation may be quite small in a federal way, as compared with others that occurred in the Departments, or many recent ones in banking business, the temptations to the embezzlement of money by the fever of speculation and immunities given to our magnificent rascals become more and more frequent. The extent of Republican embezzlements and peculations will never be known until we—"turn the rascals out."

OFFICIAL LOBBYISTS.

Much has been said, and doubtless truthfully, of the lobbies around our legislative bodies. Much has been said as to the control of lobbies at Albany, Harrisburg, and Washington. Doubtless the lobby at the latter place has been bold, even beyond the vigorous grammar of Senator LOGAN to denounce. He publicly acknowledged some weeks ago that he had been excessively lobbied for a railroad grant or other monopoly in the Yellowstone by a high Republican official in our Land Department. The party which shamelessly confesses to having elevated Garfield by the use of money, and which, as has been alleged, recently used money lavishly for the transportation of purchasable delegates to Chicago, and consigned them there to the care of its confidence-men, affords a striking illustration of the difference between precept and practice. It has not improved upon its former teaching. Its long-established practice and present conduct and policy make the combinations and log-rolling for public-building and river-and-harbor plunder bills venial, compared with the repeated attempts, which have signally failed in this House of Representatives, to carry a measure for New York bankers by which to appreciate securities and help a firm heavily loaded with a certain class of bonds.

Official corruption, base political methods, the connection between bursting banks in New York, closing savings-banks in New Jersey, and the attempted Republican legislation in Washington, together with the frantic efforts to stop the late panic by calling Government bonds in advance of expectancy—thus giving Government aid and participancy in rings of corrupt speculators—all illustrate the decay of integrity in a political, business, and social point of view.

Is it in vain to call attention to the $387,000,000 wasted upon an unseen navy? Is it in vain to inveigh against the Robesons, Belknaps, and others who have made official life suspicious by reason of their partialities?

A DEGRADED JUDICIARY.

Yet these public wrongs are as nothing compared with the contempt which has been heaped upon our supreme judiciary. The bench may no longer boast of its immaculate ermine. Even before it was dragged into the mire through which Hayes was elevated, it had lost much of that sanctity which was our best guarantee of liberty and justice. The miscarriage of justice on that occasion was not alone due to the corruptions incident to this age of moral decay. It was a conquest by corporate money-power, aided by political bigotry and partisan malice—a crime against our institutions that was condoned and defended by some of the highest men in the Republican party. Perhaps this startling degradation of the judical office was less astounding at the time because the people had become, in some sort, accustomed to vicious and mercenary judicial practices in political affairs.

The times which make such men as Jay Gould possible have made us indifferent to deeds that would have outraged our former sense of honor and duty. Is not the very form and system of our Government perverted when men like Gould can openly boast of using the legislature and the court for their selfish ends? Is there not decay in the land where judges sit in the highest courts whose gowns have been thrown upon their shoulders by cunning intrigue if not by mercenary litigants? Is there not a vulture tearing at the vitals of honest industry when a board of directors, controlled by one man, is permitted to double its corporate stock by watering and distribute its shares broadcast among his friends? It is because such things as these are possible in this Republic that panics come to us and the hard-earned wages of labor are evanescent. It is as true that the corruption which belongs to our public life has been caused as much by the profligacy of private life, as that the corruption of private life has been fostered by the opportunities which public life has afforded.

There is great need of business, social, and political reform. We have had many sad days in our history; but the saddest of all is to come if a leader such as the one recently chosen at Chicago, one whose great wealth has, it is said, been acquired by the manipulation of public credit and legislation, shall be elected to sit in the seat of executive power, with all its opportunities for political and financial rewards. The modes of the campaign which ensue from the recent contest at Chicago will be dictated not by virtue and fidelity to good principles, but by the reckless, unblushing practices of those who seek to corruptly influence the public vote.

CAN THE LAW BE ENFORCED?

What is the remedy for these recent aberrations and crimes? We must appeal to the electoral as well as the judicial tribunals. We must have a purer administration of power and justice. The unparalleled swindlers must have some other form of trial than before a Washington jury. The demand for extradition of embezzlers and public thieves must be stronger than our present State Department is disposed to make. Why are the wholesome provisions of the national banking laws allowed to remain inert on the statutes? The Federal officers high and low whose duty it is to enforce them have been criminally inactive; they should be themselves arraigned as criminals. Our law declares that every officer or agent of any national bank who embezzles, abstracts, or willfully misapplies any of the moneys, funds, or credits of the association, or who makes any false entry in any book, report, or statement, and every person who aids or abets any such business, shall be imprisoned not less than five nor more than ten years. Can this law be executed? If not, let us know the reason why. Let the national banks undergo a searching inquisition. Let the right kind of examiners be appointed. Let the apathy which now reigns be changed to activity by the demand of the people, and we will have some amazing and mysterious disclosures that will lead to reformations such as renovated France after the bursting of John Law's bubble.

THE PLATFORM OF THE PEOPLE.

But there are other remedies besides those of the law. The working people are not satisfied with the modes of the present great parties. They are organizing against monopolies. They may not very clearly see where the grievous wrong is, but they know that the rich are growing richer as the toiling millions are growing poorer. The working people are watching the oil monopolies and money engrossers, the national bankers and political Jeremy Diddlers, the bank embezzlers and official peculators, with a keen and vigilant eye. They are noting the extent of the money-power in political parties. They demand that labor and capital shall be allies in profits as well as production. They proclaim that charters are repealable and controllable by the power that granted them; that economy must be exercised in the public service; that bounties shall no longer be given for the largess of the few against the welfare of the many; that taxes be levied only for the economic ends of Government; and that unnecessary taxation must bring corrupting surpluses. They indict the old organizations—the Republican party for gross dishonesty and the usurpation and prostitution of Federal power; the Democratic party for its supineness, its want of vigorous policy, and its toleration of mammon. They insist that the best interests of the people, the many, must be regarded, as well in their daily life in respect to shelter, clothing, and food, as in their hours of labor, their system of education, and their share in our institutions and common heritage. They demand that the men who labor least shall not have the best and largest rewards. They point to the awful chasm which has been widening every day between our two great classes, the employers and the toilers.

REFORM THROUGH POLITICAL ORGANIZATION.

Do not the great ramparts of wealth that were founded in robber tariffs, reared high by corporate exactions, and manned by the political band of the money lords, challenge an outbreak of communism that may at any time destroy them? The bad blood which caused the outbreak at Cincinnati the other day is some evidence of the need of a timely reform. Peaceful reform must come from the good sense and integrity of the people through political organizations. They must combine to reform. They must communicate with each other to secure concert of action for reform. Is the needed reform to come through the Democratic party? It is not the party of the tariff robber, the commerce destroyer, or wealth engrosser. Its motto is, "A fair field for labor in all industries and no special privileges to capital." We believe that commerce should be so regulated between the States that the price of bread, coal, and the other necessaries of life may not be unduly enhanced. We demand that the importation of foreign labor under contract should be prohibited. We say that not only shall no further subsidies of public lands be granted, but that Congress must repeal the grants of lands already forfeited by the faithless corporators.

LAND-GRANT FORFEITURES.

What has Congress done in regard to land restitution? Already the Democratic House has begun the work. The following is a list of the forfeiture bills passed in the House at the present session. This list gives the names of the corporations and the acreage we are trying to recover for the people:

	Acres.
Gulf and Ship Island Railroad	652,800
Tuscaloosa and Mobile Railroad	688,000
Coosa and Tennessee Railroad	140,060
Savannah and Albany Railroad	900,000
New Orleans and State Line Railroad	120,860
Little Rock and Fort Smith Railroad	1,057,024
Texas Pacific Railroad	14,309,760
Oregon Central Railroad	1,130,880
California and Oregon Railroad	2,126,526
Atlantic and Pacific Railroad	16,000,000
Sioux City and Saint Paul Railroad	85,654
Total	37,211,504

The following bills are on the House Calendar:

	Acres.
New Orleans, Baton Rouge and Vicksburg Railroad	903,218
Oregon and California Railroad	3,701,760
Marquette, Houghton and Ontonagon Railroad	627,200
Ontonagon and Brule River Railroad	232,848
Marquette and State Line Railroad	540,848
Northern Pacific Railroad	20,000,000
Southern Pacific of California	7,500,000

How many of these bills will become law? I fear a satisfactory answer will have to await the action of a Democratic Congress.

REPUBLICAN DUPES AND AUGURS.

Shall we, like the augurs of the Republican party, regard these principles as mere generalizations for the delusion of honest voters on election day, and wink at each other over the cheat? It is not by the worship of the golden calf into which the Republican Israel has strayed that Democracy can restore the ancient faith. A compact organization of prejudice, insatiate greed, and vast money power confronts us. If we would emancipate and have labor for our allies, we must enter on reform in no hesitating fashion. Our standard-bearers must be good men, tried and true. The demands for reform are not to be disregarded. The party that disregards them will soon lack the votes to give it the power for reform. The party which disregards the industrial toilers, and levies and continues to levy heavy tribute upon the people and impose countless wrongs upon the millions, will not be the party of success, though its platform be studded with all the political and social platitudes of the times. The victory of the people is at hand. The party of the people can not be led by doctrinaires nor controlled by mere money.

THE FLAME OF DISCONTENT.

The frequent election of millionaires to the Senate and the House of Representatives only adds fresh fuel to the flame of discontent. The monstrous accumulations of wealth in the hands of a few, through legislative partiality, must soon receive a check at the hands of an indignant people. Legal trickeries, the extortions of railroad pools and tariffs, breaches of trust and of the Constitution, and other reckless disregards of social and political order we must grapple with, but the main contest will be with the giant of monopoly, whose pockets are lined with money, whose agents and directors sit in our Legislatures, and whose platitudes of hypocrisy and greed furnish planks for the fraudulent political platforms of the party in power. History repeats itself. It warns us of the fate of nations in which the privileges of the few are allowed to override the liberties and interests of the many.

Are we to learn the lesson of the French Revolution by practical inculcation? It is the old story of the downfall of nations—of royalty gambling in the provinces of the people, of enormous fortunes squeezed out of the industrial masses, of judgeships purchased, of juries suborned, of granted monopolies, of crime punished only when the criminal is poor. It is the old, old story of corruption sowing the seeds which yield the harvest of chaos and destruction.

THE BASE FASCINATION.

One would think that in this age and country the preservation of law and order would be the first object of those who have a desire for the security of property and the maintenance of liberty. One would think that the honest business interests of this country would look askance at such nominations as have recently been made at Chicago and aid in administering the remedy. One would think that a people like our own, with an inheritance so splendid, with an ancestry providentially guided here, and with the example set them by generations of patriotic men who have passed from us, would still retain the freshness and purity of virtuous power. Our lands and mines and rivers and forests and our very oil wells and fisheries—all the bounteous elements of sea and earth and sky—would seem to beckon our legislators, our judges, our executives, and our ministers of official grace and honor away from the base fascinations of hoarded pelf which dishonors to destroy our institutions.

HASTE TO THE WORK OF REFORM.

We must haste to the work of reform. America in its fresh hemisphere, in its first cycle of liberty, with the vote, with the numbers, with the added wisdom and practical sagacity of her people, must clarify the political and social atmosphere, and declare for a new order of administration ere the light of our liberties be extinguished. Let not progress and poverty march abreast in this as in the older hemisphere. Let us make the American Republic an exemplar for all future republics which may be created by the achievements of free men. Now that the world is adapting itself to new developments of physical forces and moral resources, now that new boundaries are being made between the nations, now that new elements are startling kings and kaisers, and giving fleet coursers to civilization by the vapor of water and the spark of lightning, let progress and prosperity march hand in hand on this continent. Let us not prove recreant to the demands of this new order.

THE ONWARD MARCH.

National wealth is not always national prosperity, nor does great progress always imply corresponding happiness. The world is moving, but is humanity benefited?

England is laying her grasping touch upon Egypt. Forty centuries of enslaved labor are made tributary to her crown. Russia is pressing down to despoil her of the stolen empire of India. France seeks an African realm in Tunis on one side of Algiers, and on the other side looks longingly toward Morocco. She has just concluded the treaty of Tien-Tsin and obtained the exclusive right to trade with the Chinese provinces bordering Yunnan and the contiguous provinces of Kuang-si and Kuang-Tong; and after swallowing Madagascar she craves the rich tin and copper opulence of Nong-Yuen-Tu. With the Portuguese adventurer upon the east coast of Africa, phlegmatic Holland with an Orange free state in the Transvaal, the Italian flag flying in Tripoli, and a German colony in Southwest Africa, England finds herself with rivals at every step disputing her right upon the Congo and throughout the Dark Continent—all these changes and advancements of our race upon the earth come from the greed and rivalry of kings.

Let our progress be in the paths of peace, of humanity, and justice, and all our victories in the interest of liberty and industry. Let the torch of patriotism shine out upon the shoals and reefs where the wreckers would despoil our ship of state, so that free, unbiased as the winds and waves, she may sail on forever freighted with the hopes and the happiness of our human kind. Let those who shall hereafter direct her course be as the elect of God—yea, even the salt of the earth.

Contested Election—English vs. Peelle.

SPEECH

OF

HON. GEORGE L. CONVERSE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1884.

The House having under consideration the contested-election case of English vs. Peelle—

Mr. CONVERSE said:

Mr. SPEAKER: The reading of the majority and minority reports renders it unnecessary to enter into any very extended discussion in opening the debate on this contest. It will be seen by those who followed the reading of the two reports that the final question depends upon one or more of three or four prominent points in controversy. The first is the question of the recount. The testimony shows there are three counties in this Congressional district. In two of them English carried a majority of 553 and no contest is made by either party in these two counties. When English came into Marion County, the third county of the district, he had that majority of 553, which was to be overcome by Mr. Peelle in order to secure his election. Mr. Peelle secured the certificate of election on an allowed plurality of 87 votes. There was no suspicion of any false count of the vote immediately after the election and no discovery was made of a false count until some days afterward, when the discovery was accidentally made. It was known these fraudulent tickets, or spring-back tickets as they were called, had been voted extensively in Marion County in violation of the constitution and laws of the State of Indiana, which provided that the ballot there should be kept secret, and which also provided that tickets should be of uniform width, printed on white paper without any distinguishing marks. The supreme court of that State have held that ballots cast in violation of these provisions should be rejected. The committee were of the opinion that these spring-back tickets, which are simply tickets printed on a sort of pasteboard or lithographic paper, were as distinctly marked as if there were photographs of one or the other of the candidates on the ticket itself.

These tickets were voted to the extent of 12,051 in Marion County. Mr. English knew of the use of these illegal and fraudulent tickets, and that the Democrats had protested against their use on the morning of the election and all through the day and objected to the counting of them, and he immediately took steps to have those spring-back tickets which had been cast in Marion County recounted.

After the election a contest was had in the courts over the election of sheriff, and under the law of Indiana it was the duty of the court to appoint three judicious, disinterested men of high character to recount the ballot. Mr. Austin H. Brown was one of the three appointed by the court. All parties attest his integrity and high character and purity as a man. He attended and was connected with that official count, and was asked while making the official count also to count the number of spring-back tickets cast in that county at that election. That was all he was employed to do, but of his own accord and of his own motion he thought it prudent and proper to count the vote in that county between Mr. Peelle and Mr. English, and in making the count of the vote he was the man who discovered that a fraud had been perpetrated in the count of the ballots and the return of the vote to the clerk. He discovered an error of 99 votes, which was enough to change the result in favor of Mr. English and give him a majority of 12 over Mr. Peelle.

Hon. Austin H. Brown, who is shown by the evidence to be a gentleman of the highest standing and an expert of great ability, was the Democrat on this commission. The fact that he was appointed by a Republican judge implies that the Republicans thought he was a good and capable man to make a reliable recount of the ballots. He did recount them, not a long time after but immediately after the election, in the same month. This was an official recount of the ballots

under the law of the State; and while it directly involved the votes cast for the office of sheriff, it necessarily required a recount of all the ballots cast; and Mr. Brown clearly had the right to examine and closely scrutinize every ballot, which he says he did do. He is well known to many gentlemen in Congress, and those who do not know him will no doubt be satisfied as to his qualifications and high standing by reading what is said of him in the evidence by such men as ex-Senator Joseph E. McDonald and Judge William E. Niblack, who was for many years a member of the United States House of Representatives. (Record, pages 461, 521, 464, 466, 84, 454, 455.) The ballots were examined by him by authority of law. He says he carefully examined and counted every one of them, not only for sheriff but Congressman. He made a record of his count, not a long time afterward, but right then and there, when the count was completed, which was very soon after the election, and he was sworn to the correctness of that record, and it shows that the contestant was certainly elected.

He says that every ballot passed through his hands and was carefully scanned by him, and that contestee's majority was only 541 in Marion County, instead of 640, as returned by the board of canvassers; and it is proved that on the day of completing the count he told F. P. Woolen that his count showed that Mr. English was elected, and not Mr. Peelle. Mr. Woolen so testified. (Record, page 464.)

Mr. Brown's testimony shows that the returns made by the board of canvassers were false and utterly unreliable, that he found a great many errors, not only as to sheriff, but Congressman; in the latter case that contestant gained as many as 30 votes by errors which he discovered in two Republican wards alone (Record, page 456), and that he gained in many other precincts, aggregating 99 votes more than the aggregate of errors found in favor of contestee, and that he carefully counted as to both; also that he found the returns incorrect as to sheriff, there being numerous errors, the aggregate being in favor of the Republican candidate of 49 votes.

It is not claimed that the other commissioner made any count of the vote for Congress, so that Mr. Brown's evidence stands as the only full and complete count of all the ballots made by any person, and it stands uncontradicted.

The objection that is made that Mr. Brown was not sworn to count the ballots for Congressman is a mere technicality. That did not keep him from making the count correctly, or telling the truth about it when examined under oath, as he was in this case.

There is no substantial difference between Mr. Brown's oath that he would correctly count the ballots and Mr. Brown's oath that he had correctly counted them.

Objection is made to Mr. Brown's count because it contradicts the returns made by the board of canvassers, as though there was anything infallible in returns made by partisan election boards such as these were shown to be, where evidence of fraudulent tickets and fraudulent practices crops out all along the line, and where the Republicans themselves have shown that the returns were false and utterly unreliable, for it is not disputed that on the official recount the votes counted for sheriff did not agree with the returns.

The commissioners reported unanimously that the ballots showed that the returns made by the election officers and board of canvassers were not correct; on the contrary were full of errors, amounting in the aggregate to 49 votes. So reported all the commissioners to the court, and so testified all the commissioners in this contested-election case. (See record, pp. 86, 403, 410.)

If the returns were false and unreliable as to sheriff there would seem to be no reason to doubt the evidence of a competent and honorable witness, such as Mr. Brown is shown to be, that he had carefully counted all the ballots and found the returns not only false and unreliable as to sheriff, but also as to Congressman, and that if the returns had been made out in accordance with the ballots Mr. English was certainly elected.

All admit Mr. Brown's count of the vote for sheriff to be correct. Why not his count for Congressman? If Republicans question the latter, is it because in the former case it was favorable to a Republican and in the latter to a Democrat?

It is true the official return is *prima facie* correct, but it is only *prima facie* correct, and means simply that a rebuttable and provisional presumption of law stands behind the returns. (Wharton on Evidence, section 1226.)

It is not in any sense conclusive on the House. The very presumption of the correctness of the returns vanishes when you take into consideration that there was but one Democratic inspector out of fifty-six in the city of Indianapolis; that the whole election machinery used in making up these returns was intensely partisan; and that there were strong indications of fraud.

And the presumption of correctness entirely ceases and gets on the other side when, in addition to these things, it is shown that it was judicially determined that the returns were not correct in the matter of the sheriff, all the commissioners uniting in the report to that effect, and all testifying in this case that the returns as to sheriff were full of errors and false. Under this state of affairs it would be strange indeed not to accept as true the statement under oath of a gentleman of character like Mr. Brown as to a matter of fact which he knows of his own personal knowledge, which he obtained in a lawful manner, reduced to writing at the very time he obtained it, about the correctness of which he has no doubt whatever, and which has not been successfully controverted by any other evidence.

Errors or frauds might have been made in the count in any of the numerous precincts, and it is much more likely that they were made in one or more of these partisan election boards than that a gentleman of such standing as Mr. Brown would make a false count of the ballots and swear to it, especially as the ballots were to be kept in the custody of Republicans and had been in their custody all the time. After the evidence of Mr. Brown the burden was on the contestee to contradict it by something more substantial than the flimsy statement of Mr. Byram, made out more than a year after the election, and with his admission that there were about 7,000 ballots which he did not even attempt to count. The only inference is that Mr. Brown's statement is true and that there was no evidence that would contradict it. Surely something more is required to successfully meet such positive evidence as Mr. Brown's count than technical objections.

As to the keeping of the ballots after the election Austin H. Brown testifies as follows:

Q. Who had the custody of the ballots from the time of said election until the time of the recount by said commissioners?
A. Under the law they were in the custody of the inspector after the election, from the time of closing until the meeting of the board of canvassers, on Wednesday, at 10 o'clock of that day, and then they were placed in the charge of the clerk of the county, and they were then retained by him until this commission met, and they were turned over by the then clerk. In the mean time there had been a change in the office. Mr. Ransdall had gone out, and Mr. McLain had succeeded him.
Q. What were the politics of these clerks?
A. Republican.
Q. Were they the supporters of Stanton J. Peelle as a candidate for Congress at that time, if you know?
A. Yes; so far as I know they were.
Q. Were the ballots sealed and put in bags, as required by law, at the time the commissioners received them officially from the clerk?
A. All that came into the possession of the commission were so sealed. (Record, page 86.)

The Republican clerk of the county, Moses McLain, testifies on this subject in answer to questions asked by Mr. Peelle himself, after Mr. Brown had testified in this case, as follows:

Q. You had charge of the ballots as clerk of this county?
A. Yes, sir.
Q. And still have possession of them?
A. Yes, sir.
Q. Are they still the same as when the board returned them?
A. Yes, sir.
Q. The ballots are in your possession now as clerk of this county?
A. Yes, sir. (Record, p. 531.)

This would seem to be pretty conclusive evidence as to how and by whom the ballots counted by Mr. Brown and the commission had been kept, and it will be seen that they were kept by Republicans, who were ardent friends and supporters of the contestee, and who still had possession of them after Mr. Brown testified in this case.

If Mr. Peelle questioned the truthfulness of Mr. Brown's statement or the correctness of his count why did he not when he had the custodian of the ballots on the stand bring them forward and have them counted again and thus prove Brown's error or falsehood?

The law of Indiana on the subject of keeping the ballots is as follows:

As soon as the votes are counted, and before the certificate of the judges, prescribed in the foregoing section, is made out, the ballots, with one of the lists of voters and one of the tally papers, shall, in the presence of the judges and clerks, be carefully and securely placed by the inspector, in the presence of the judges, in a strong and stout paper envelope or bag, which shall then be tightly closed and well sealed with wax by the inspector, and shall be delivered by such inspector to the county clerk at the very earliest possible period before or on the Thursday next succeeding said election, and the inspector shall securely keep said envelope containing the ballots and papers therein, and permit no one to open said envelope or touch or tamper with said ballots or papers therein; and upon the delivery of such envelope to the clerk, said inspector shall take and subscribe an oath, before said clerk, that he has securely kept said envelope and the ballots and papers therein; and that after said envelope had been closed and sealed by him in the presence of the judges and clerks he had not suffered or permitted any person to break the seal, or open said envelope, or touch or tamper with said ballots or papers, and that no person has broken said seal or opened said envelope to his knowledge, which oath shall be filed in said clerk's office with the other election papers.

The clerk shall securely keep said envelope so sealed with the ballots and papers therein in the same condition as it was received by him from the inspector. (R. S., 1881, sections 4713, 4714.)

It will thus be seen that the ballots after they left the hands of the voters went into the hands of the election inspectors, every one of whom in fifty-four precincts of Indianapolis were Republicans.

The law required them to be carefully sealed up by the inspector and delivered to the county clerk, and the county clerk then was Daniel M. Ransdall, an ardent Republican supporter of Mr. Peelle and chairman of the Republican county committee. He was the same person who selected the material and aided in getting up the illegal "springback" ticket. (See his own deposition, record, pages 365, 367.)

But a few days after the election Moses McLain, another ardent Republican and supporter of Mr. Peelle, became county clerk and legal custodian of the ballots, as we have already shown by the law and the evidence, and he turned them over to the Republican board of commissioners to recount according to law, and they were recounted by Mr. Brown and the other commissioners, but still retained in the custody of Clerk McLain, as shown in his evidence already quoted.

In Buchanan vs. Manning it was held that the contestee should be responsible for the conduct of his "party friends" for firing cannon in close proximity to the polls. (Election Cases Forty-seventh Congress, page 287.)

Now, if the ballots in this case were not safely kept it was because of the fault and wrong of these Republican custodians. It must be borne in mind that all of the Republican county officers, including Clerk McLain, had election contests on their hands growing out of this same election for like causes, and that the ballots under the statute were to be used in these contests. It can not be rightfully claimed that the ballots were tampered with in the interest of the contestant, as it is proved and not contradicted that the ballots were all the time in the custody of the ardent friends and supporters of Mr. Peelle, the contestee.

To hold that official returns are conclusive and can not be contradicted, when, as in this case, they are shown to be notoriously false, fraudulent, and unreliable, would be to deny substantial justice; and it would be the most glaring injustice to hold the contestant responsible because a ticket voted for himself in the second precinct of the seventeenth ward by Austin H. Brown could not be found, especially as the evidence showed that that precinct was under the control of his most unscrupulous opponents and that the ballots had all the time been in the custody of the zealous friends and supporters of the contestee.

There is not the slightest evidence or ground for presuming that there was any tampering with the ballots in the interest of the Democrats, and especially of the contestant.

Now, Mr. Speaker, that single fact thus established by the sworn testimony of an honest man, a man of high character, a man of ability for this sort of service, is sufficient to change the result in this contest and of itself settles the controversy. Not one syllable of evidence has been offered upon the other side to overthrow the testimony of Austin H. Brown. If Mr. Peelle or his partisan friends were not satisfied or had not been satisfied with the honest count made by Mr. Brown, they had it entirely in their power, they had it exclusively in their own hands, to have shown the error and to have established the mistake if any had been made in this count, and they would have done so. But instead of offering proof in that direction, if they claimed a mistake, not a scintilla of evidence has been offered by Mr. Peelle or any of his friends tending to impeach the count of Mr. Brown. The testimony, I have said, shows the high character of Mr. Brown and his ability, which are testified to by men of both political parties, and I believe has not been questioned.

But, Mr. Speaker, I pass from that point. The evidence shows that in some two or more election precincts in the city of Indianapolis, where I am led to believe that there has not been an honest election for the last fifteen or twenty years, one hundred Germans and others who came there for the purpose of voting were turned away from the polls and not allowed to deposit their ballots. These parties came there with the intention of voting for Mr. English. The law of Indiana requires that when a vote is challenged the voter shall present not only his own affidavit but that of some freeholder that he is a citizen and entitled to vote. These men came there for the purpose of voting. Their votes were challenged. They presented these affidavits, and the affidavits were rejected.

The votes were rejected notwithstanding that the law of Indiana requires whenever the affidavit is filed the trustees of the election have no discretion whatever in the matter, but are obliged to receive and count the vote and leave its validity to be determined by subsequent contest. It was their duty to have received the votes and leave the question of the validity of them either to the courts or to Congress, as the case might be. But they refused to receive the votes, and the testimony of some seven witnesses shows that in the neighborhood of one hundred of these Democratic voters were thus turned away from the polls and not allowed to exercise their right of voting. It shows also that the entire police force of the city of Indianapolis was in the hands of the Republican party. The officers of the election built a chute up to the polls through which the voters were required to walk to the polls. When the challenge of a voter was made there was a police officer at hand to tell the party offering to vote to get out of the chute, and one hundred or more legal Democratic voters were turned out in that manner. Senator McDonald, who is known to you and the members of this House personally or by reputation, was one of the men who testified to these Democratic voters being turned away who were desiring to vote, and who had complied with the law of Indiana by filing the necessary affidavits. He himself went up the chute with some of the voters and asked the trustees to receive their votes, but his request was refused and the votes rejected. From that source alone there was enough fraud to change the result of the election. Their votes alone, if they had been received and counted, would have given the majority where it properly belonged, to Mr. English instead of Mr. Peelle.

I have now shown, Mr. Speaker, two facts constituting valid objection to the retention of the seat by the contestee in this case, either of which would have elected Mr. English instead of Mr. Peelle. But the evidences of fraud do not stop there. The evidence shows that at the hands of the leaders of the Republican party in Indianapolis the poor-house and the jail were emptied and the "spring-back" tickets, those fraudulent pasteboard tickets, which I will call particular attention to presently, were put into the hands of the honest poor of the poor-house and the jail-birds who had been assiduously collected for weeks for that purpose, and they were marched to the polls, and in that way compelled to vote the Republican ticket. The evidence shows that thirty-four men, tramps and thieves, who had been gathered up about the city of Indianapolis by the authorities just preceding the election, were marched up in that way to the polls with the pasteboard ballots in their hands and compelled to vote the Republican ticket.

Even if they were legal voters, which is not probable, the votes were cast under duress, and therefore fraudulent and void.

The evidence shows that in two instances, at least, Democrats who had come out of the jail as they went up the chute in some way came in possession of Democratic tickets and undertook to vote them instead of voting the spring-back tickets furnished by the Republican jailor. They were immediately challenged and turned aside, though released from jail for the purpose of voting.

There were 51 of those votes from the poor-house; there were 34 from the jail. The evidence shows that two-thirds of the men from the poor-house were Democrats and desired to vote the Democratic ticket. Some gentlemen laugh because I have said a majority of the poor were Democrats. Yes, sir; our party is supported by the poor. We depend upon the laboring honest poor for the support of our party. [Applause.]

Mr. MILLER, of Pennsylvania. How about your candidates? Are they poor?

Mr. CONVERSE. And that is the reason we desire to preserve the secrecy of the ballot-box and are so jealous of every invasion of it. We do not intend you shall destroy it and thus prevent these poor men from voting their honest sentiments.

From these two sources there was fraudulent votes enough in the hands of the Republican managers, with their spring-back tickets, to change the result. Thus there are three separate sources of Republican frauds, either of which was sufficient to change the result. I come now for a moment to another question.

Mr. HEWITT, of Alabama. Will the gentleman allow me to ask him just one question?

Mr. CONVERSE. Certainly.

Mr. HEWITT, of Alabama. I desire to ask just one question in relation to the jail matter. Did they take prisoners out of the jail, march them up under an officer, and vote them?

Mr. CONVERSE. Some of them were marched up under an officer and voted. Many of them were dismissed—turned loose—and sent to the polls on a promise to vote the Republican ticket; and they went to the polls and voted under the eye of the Republican police, who knew them and who could tell from the pasteboard tickets in their hands as they walked up the chute whether they were voting right. After voting there were no further charges against them.

Mr. LEWIS. Were they undergoing sentence?

Mr. CONVERSE. I suppose they were mostly tramps that had been gathered up in the vicinity for the purpose of being voted. It must be remembered that the authorities of the poor-house and the sheriff—who hauled the poor in wagons to the polls and placed the pasteboard tickets in their hands, the election officers coming to the wagons to get the tickets and place them in the box—and his deputies, who had in charge those prisoners, were Republicans. The Republican sheriff was on the stand as one of Mr. Peelle's witnesses, and yet Mr. Peelle never asked him one word about these frauds at the ballot-box through those prisoners. He never asked a word as to the frauds through the poor-house, though he had witnesses there of whom he could have inquired. I think I can imagine the reason why no inquiries were made of the sheriff. His friends probably found out, and I have seen the affidavit to that effect, showing that some of those prisoners, though that is not proved in the record in this case—it was not taken in time, and I only offer that as a reason why no inquiry was made——

Mr. PEELLE, of Indiana. Will the gentleman allow me——

Mr. CONVERSE. The gentleman knows what is coming. That affidavit shows that half a dozen of these prisoners were marched from one poll to another and voted over and over again.

Mr. PEELLE, of Indiana. Will the gentleman name the man who made the affidavit?

Mr. CONVERSE. If the gentleman desires to have it in the RECORD I will have it printed.

Mr. BROWNE, of Indiana. Does it not appear to the gentleman from Ohio a somewhat singular course to bring testimony before the House which is not in the record?

Mr. CONVERSE. I have stated that it was not testimony, but I said that that was probably the reason why the gentleman and his friends declined to go into the inquiry any further; that is all.

Mr. BROWNE, of Indiana. Why do you use it, then, if it is not testimony?

Mr. CONVERSE. I have a right to surmise the reason why the gentleman did not inquire. I have stated it as a fact that the inquiry was not made, that the gentleman did not dare to inquire on that subject. There can be no question about this contest as to how it ought to be decided.

I will refer to one other fact, not for the purpose of counting the vote so much as for the purpose of showing the depth of degradation to which these Republican managers in Indianapolis descended at this election. They went to work and printed counterfeit Democratic tickets, spurious Democratic tickets, with Mr. Peelle's name where Mr. English's name belonged. Those tickets were peddled by the internal-revenue collector of the city of Indianapolis, as the proof shows, and some dozen of them got into the boxes, though they were discovered by 8 o'clock in the morning, and immediately upon their discovery the Democrats posted large handbills at every election place in the city warning the voters against them. Notwithstanding that precaution some dozen of those counterfeit tickets got into the ballot-boxes and were counted for Mr. Peelle. The men who voted them were not only deprived of having their votes counted as they should have been, but the votes which they gave were counted on the other side, making the difference in the result twice what it would have been had the men been allowed to vote their honest sentiments.

The Democratic ticket was in exact conformity to the requirements of law, being printed on ordinary plain white paper, such as is generally used for printing, as was also the Greenback ticket. But the evidence shows that the Republican ticket was printed upon a heavy material, called by many of the witnesses "card-board," but by persons engaged in the manufacture and sale of such material as "plate" or "Western plate," and by some of contestee's witnesses as heavy "book," twice as heavy as ordinary printing-paper. Because of the extraordinary character of the material and the tendency of the ticket to spring open when folded, thus facilitating double voting, the tickets became known as "card-board" or "spring-back" tickets. The material is shown to have been bought and billed as "plate" (record, page 442), and the evidence is conclusive that for election ballots it was material of extraordinary thickness and texture, and for that reason the ballots, even when folded as ballots are usually folded when voted, could be easily distinguished by sight or touch from ballots printed on plain white paper, such as is ordinarily used for election tickets and such as the statute of Indiana clearly seems to require, namely:

> All ballots which may be cast at any election hereafter holden in this State shall be written or printed on plain white paper of a uniform width of three (3) inches, without any distinguishing marks or other embellishments thereon except the names of the candidates and the offices for which they were voted. (Section 4701 Revised Statutes of 1881.)

Now, when a statute uses language obviously not technical (and it is admitted that the words in the above statute are not technical), the language must be interpreted and understood in its popular or ordinary sense. (Potter's Dwarris on Stat. and Con. Law, page 203; Bishop on the Written Law, section 101.) And it is an elementary principle universally recognized that a statute is to be construed with reference to its end and object, with reference to its reason, intent, and purpose. The reason, intent, and purpose of the Indiana statute is obvious. Even before its passage the supreme court of that State had declared that the ballot system of voting provided by the constitution of that State meant secret voting.

The statute was in furtherance of the constitution and meant to secure the secrecy of the ballot. When it is provided that ballots shall be written or printed on plain white paper without distinguishing marks or embellishments, it means ordinary plain white paper ordinarily used for printing or writing, not extraordinary plain white paper used for extraordinary purposes. It was certainly not the intention of the law-makers to authorize a "scheme to beat" any party by means of ballots printed on lithographic plate paper, or any other material that would be unusual and extraordinary as election tickets. Even without any statutory enactment secrecy of the ballot was required by the spirit of the constitution of that State, which provides that "all elections by the people shall be by ballot." (Article 2, section 13.)

Now, ballot means secret voting; its purpose is, by means of such secrecy, to secure perfect freedom to the elector, to emancipate dependents from the control of superiors, to protect the employé from the employer, the workingman from the boss, the debtor from his creditor, the members of a society or a party or a class from his associates, or even an offender against the laws from the officer who may attempt to control his vote.

The supreme court of Indiana decided in Williams vs. Stein (38 Ind.) that the word "ballot" as used in the constitution of that State "implies absolute and inviolable secrecy, and that the principle is founded in the highest considerations of public policy." (Page 95.)

The court quotes, appropriately, from Cooley's Con. Lim., 604, that even—

> In the absence of such a statute, all devices by which party managers are enabled to distinguish ballots in the hands of the voter, and thus determine whether he is voting for or against them, are opposed to the spirit of the constitution, inasmuch as they tend to defeat the design for which voting by ballot is established.

And again:

> These statutes are simply declaratory of a constitutional principle that inheres in the system of voting by ballot, and which ought to be inviolable, whether declared or not.

Clearly the object of the statute of Indiana was to secure secrecy of the ballot, and "any device" which destroyed that was a violation of the statute and a violation of the spirit of the constitution, even if there had been no statute on the subject. That "the spring-back ticket" did destroy the secrecy of the ballot at that election is clearly proved, and also that it was designed for that purpose by the Republican managers.

Nothing could be more absurd than to claim that because the Democratic and Republican tickets could be distinguished from each other, therefore one destroyed the secrecy of the ballot as much as the other, just as much as to say that because a right act can be distinguished from a wrong act therefore there is no difference between the qualities of the acts! Such logic would apply just as well were the Republican tickets printed on leather or sheet-iron.

If the Democratic ticket is used as a standard of comparison it is not because it is the Democratic ticket, but because it is conclusively shown to have been, and is admitted to have been, printed on ordinary plain white paper, such as the statute of Indiana clearly contemplates. The "spring-back" ticket is shown not to have been printed on such material. This is conclusively proved.

Such men as ex-Governor Thomas A. Hendricks, ex-United States Senator Joseph E. McDonald, and David Turpie, Hon. R. W. Medkirk, the Greenback candidate for Congress, and other old and favorably known citizens of Indiana, and such well-known Republicans as W. P. Fishback, Edward Mill, C. F. Darnell, C. S. Butterfield, W. F. Fish, J. J. Curtis, &c., testified to the distinguishable and extraordinary character of these "card-board" or "spring-back" tickets, and that in their long experience they never knew tickets at any election in Indiana before to be of such thick and extraordinary material, and that the effect of their use was to destroy the secrecy of the ballot. In most of the cases where questions as to the legality of distinguishable tickets have arisen it has been where the distinguishing marks or embellishments were on the inside of the tickets, placed there accidentally or without design to defraud or destroy the secrecy of the ballot, and where the ballots were received and counted at the time without objection or protest from the opposite party.

This is not a case where the distinguishing feature was on the inside of the ballots only, but it was in the material itself, so distinctly visible and distinguishable from the outside, even when the ballots were folded, as tickets are ordinarily folded when being voted, that they could be, and were, readily distinguished.

Senator McDonald testified that he could and did distinguish these "spring-back" tickets in the hands of the voters, as they were being voted, when he was off a distance of fifteen or twenty feet. Councilman Fultz testified that he could distinguish them, as they were being voted, from any other ticket, even when standing in the middle of the street, twenty-five or thirty feet distant from where the tickets were being voted.

It will hardly be denied that ballots printed on leather, or tin, or cloth, or black or red or striped paper would be in violation of the statute of Indiana and the spirit of the constitution of that State, and consequently illegal and void, because, being distinguishable, they would destroy the secrecy of the ballot; and yet these "spring-back" tickets could be distinguished as well as those by sight and touch, as was conclusively proved by contestee's own witnesses. There can be no doubt but material can distinguish a ballot and destroy secrecy quite as well and in some instances more completely than color. It will hardly be contended that at an election in Indiana ballots would be legal that were printed on white blotting paper the eighth of an inch thick. It could not be considered plain white paper in the ordinary or popular sense such as the Indiana statute clearly contemplates. Even if the material be white and plain on the surface, there must obviously be some limit to its bulk and thickness, otherwise the attempt to preserve the secrecy of the ballot would prove an utter failure.

Neither is it a case where the distinguishable ticket was used by accident or without fraudulent design. Neither is it a case where the distinguishable ballots were received and counted without objection from the opposite party, as there is an abundance of evidence that the "spring-back" tickets were denounced as illegal to the election boards on the morning of the election, and that Democrats objected and protested against such tickets being received or counted.

This was not necessary, however, as an examination of the constitution and statutes of Indiana will show that no objection or challenge is provided for at the polls, except as to the character of the voter, his age, residence, &c. The character of the ticket is left to be judged of by the courts in case of local officers, by the House of Representatives in the case of Congress, upon subsequent scrutiny.

A man may use a black ticket if he wish, and though that may be no ground for challenge, it is a good ground for discarding the ballot upon subsequent investigation and trial. But in this case the objection was distinctly and repeatedly made, as already stated, to receiving or counting the "spring-back" ballots on the ground of their illegality.

It can not be said that the wishes of the voters could be just as well expressed by these "spring-back" tickets as by a ticket on ordinary plain white paper, such as the law contemplates, and that if voters saw fit to use ballots that were distinguishable they had a right to do so, and that it was nobody's business but their own.

"The right of suffrage is not a natural right, nor is it an absolute unqualified personal right. It is the right derived in this country from constitutions and statutes." (McCrary, section 3, and cases therein cited.)

Whether a few men or an immense number of men might be willing to let the world know for whom they were voting by using distinguishable ballots has nothing at all to do with determining whether or not such ballots are in conformity with the law.

The wishes of the voters could be very well ascertained by *viva voce* vote, and the voters might prefer making a selection that way, but an election of a member of Congress in Indiana in that way, under the present laws, would not be deemed valid by this House, even though the party claiming the seat was the undoubted choice of the majority of electors so voting. Neither should his election be held valid if the ballots cast for him were printed on tin, or leather, or any other material than provided by law, or in any other way than provided by law; for while it is conceded that under the Constitution of the United States the House of Representatives "is the judge of the election, returns, and qualifications of its own members," yet it would be an unwarranted use of that power to hold that ballots should be counted, in determining an election, which were in violation of the law of the State where the election took place, and especially where the law evidently intended to secure the secrecy of the ballot, and in a State having a constitution which requires that "all elections by the people shall be by ballot."

Elections should be conducted according to law, and the party violating the law should not be allowed to profit by their wrong-doing. And that the number of "spring-back" tickets voted was large has nothing to do with the question of their legality. If they were in violation of law they were illegal, whether numbering hundreds or thousands; and in this case the parties using such ballots would have no one to blame but themselves.

Having invaded the secrecy of the ballot, and thereby violated the spirit of the law and the constitution of their State in their zeal to get the advantage, and having overreached themselves in so doing, they alone will be responsible for results.

This is not a case where a party innocently and without design used a distinguishable ticket, or a ticket of unusual or extraordinary bulk and texture, but the reverse. The evidence shows that the "spring-back" tickets were printed on the Sunday preceding the election. The work was done under the superintendence of D. M. Ransdall, the chairman of the Republican county committee, and Otto Hassleman, a member of the executive committee of the same Republican county committee.

The material for the tickets was selected by these men, and the latter said it was purchased of Chatfield & Woods, of Cincinnati, and when the bill of Chatfield & Woods was produced it disclosed that the material was billed as "plate."

He also admitted that the day before the election he borrowed similar material from Mr. Burford, of Indianapolis, who is a Democrat, and that he returned the same identical material to Mr. Burford after the election, the object evidently being to secure the Republicans a distinguishable ticket by reason of being on unusually heavy material, which no other party would have.

This was confirmed on the day of the election by this same witness, who acted as a Republican challenger at the first precinct of the eleventh ward, and there admitted to several persons that the "spring-back" ticket was "a scheme gotten up by us Republicans to beat you Democrats."

Colored men inclined to vote the Democratic ticket came to the polls and went away without voting after looking at the two tickets and seeing that the Republican ticket was of such extraordinary bulk that it was distinguishable.

One witness, who was at this precinct, said:

> In one or two instances I saw them go away and come back with their tickets cin a little envelope and go to the window so that the Republican challenger ould not see their tickets.

Hon. W. P. Fishback, one of the most prominent Republicans in Indianapolis, and a lawyer of great ability, declared at the polls on the day of the election that the Republican ticket was "a fraud, and gotten up for fraudulent purposes."

In the very nature of things it would be difficult, and in fact almost impossible, for the contestant to show, specifically, how many voters would have voted for him and did not, but either voted for contestee or did not vote at all, because the secrecy of the ballot was destroyed by the use of the "spring-back" ticket; but he has, nevertheless, introduced conclusive evidence showing that he lost thereby many votes. There is no reasonable doubt that he lost from this cause alone many more than 87 votes.

The same is true as to the double voting. The evidence shows that the spring-back tickets, as their very name indicates, were of such material as to spring open when lightly folded and thus facilitate double voting, and that there was double voting in consequence at that election. The exact number is difficult to show, because the surplus ballots in some instances, if not all, were destroyed by the local election boards and not counted in their returns or sent up to the county clerk with the other ballots.

Mr. Albertsmyer testified the surplus ballots were thrown out "to make it correspond."

Mr. Fultz testifies that the Republican board in his precinct threw out 8 ballots in order to make the number correspond with the number of voters names on the poll list.

It may be said that this was fair if 4 were Democratic and 4 Republican ballots, but this can not be sustained, for the ballots destroyed may not have been the same ballots voted double, even if the same number was destroyed. If this excess of ballots grew out of the use of "spring-back" tickets, which, the evidence shows, facilitated double voting, then the destruction of the same number of Democratic and Republican ballots still left the Republicans gainers to the extent of about one-half the double ballots voted. There are eighty precincts in Marion County, and the Republican "spring-back" ballots were voted in all of them.

Florence Casey testifies that in his precinct three or four pasters having the name of Mr. English were found loose in the ballot-box, and were not counted for him. Undoubtedly they had been placed over the name of Mr. Peelle, and had become detached in the ballot-box. That would make a difference of six or eight in English's favor in that precinct alone.

I have nothing further to say at this time in opening this case, and desire to reserve the balance of my time. I will say to gentlemen on the other side that we would be glad if we could get a vote on this case at half past 4 o'clock this afternoon.

Mr. MILLER, of Pennsylvania. Why not take the vote now?

Mr CONVERSE. I am perfectly willing.

Mr. MILLER, of Pennsylvania. I have no doubt of it.

Mr. CONVERSE. I would inquire how much time I have left?

The SPEAKER *pro tempore* (Mr. Cox, of New York). The gentleman has forty minutes remaining.

Mr. WHITE, of Kentucky. Before the gentleman from Ohio [Mr. CONVERSE] takes his seat will he allow me to ask him a question? I understood the gentleman to state that quite a number of Germans and others had presented themselves at the polls asking to vote and that they had been denied that privilege, and that Mr. McDonald who was well known, had sworn to that vote. Will the gentleman state how many persons there were, and where we can find their names, who appeared and asked to vote and were not allowed to do so?

Mr. CONVERSE. I can not state the names, for the list was not preserved. But there are seven witnesses, notwithstanding the report of the minority of the committee on that point, who testify that from twenty-five to sixty persons in one election precinct were thus not allowed to vote. There are three or four witnesses who testify that there were above a hundred who were thus turned away. Ex-Senator McDonald and other Democrats made one or two or three test cases, believing that it was not necessary that each man should file his affidavit and then return through the chute. It would have taken a score of clerks to prepare affidavits for all. They therefore made these test cases which were rejected, and then the others whose right to vote could have been proved by affidavit were counted to make up the hundred. I think that three witnesses placed the number above a hundred.

Mr. WHITE, of Kentucky. Do I understand the gentleman that these men swore that they appeared and asked to vote, or did they swear that they saw some other persons appear and ask to vote who were not allowed to do so, and that they knew that there were a hundred others?

Mr. CONVERSE. These seven witnesses were simply spectators, and testify to what they saw and heard.

Mr. WHITE, of Kentucky. Yes; then no man who actually appeared and asked to vote was refused a vote, but somebody else saw somebody else who was not allowed to vote and says that he knew there were a great many more.

Mr. CONVERSE. The gentleman does not understand any such thing.

Mr. WHITE, of Kentucky. That is what I understand.

Mr. BROWNE, of Indiana. Will the gentleman allow me to ask him a question?

Mr. CONVERSE. I will answer any question if it does not come out of my time.

Mr. BROWNE, of Indiana. The gentleman will have all the time allowed him that he desires.

The SPEAKER *pro tempore*. To whom does the gentleman from Ohio yield?

Mr. CONVERSE. I will yield the floor to the other side. I presume the gentleman from Ohio [Mr. HART] will take the floor.

Mr. BROWNE, of Indiana. I desire to ask the gentleman if he is prepared to give to this House the name of a single one of the hundred men or more whose votes he says were rejected, or is he prepared to say that a single one of those rejected voters was offered as a witness in this case?

Mr. CONVERSE. I will answer the gentleman; I have answered

the question. I say that they did not preserve the names of the voters, but I do say that seven witnesses testify, among the number ex-Senator McDonald, to the turning away of these voters in this manner as I have described.

Mr. WHITE, of Kentucky. Was Senator McDonald turned away? Was he refused the right to vote?

Mr. MILLIKEN. Did any voter testify that he was himself not allowed to vote?

Mr. CONVERSE. I do not think any one was called.

Mr. MILLIKEN. Ah!

Mr. CONVERSE. It was not necessary that any one of them should be called. I say to the gentleman this, that the superintendent and inspector of elections swore that no one was turned away, but seven witnesses contradicted him.

Mr. MILLIKEN. Let me ask——

Mr. CONVERSE. Let me finish. The superintendent and inspector of elections swore that no one was turned away, and the gentleman from Ohio [Mr. HART] quotes that in his minority report. Now, in the face of that I assert that there are at least seven witnesses, including Senator McDonald, who swore directly the reverse.

Mr. MILLIKEN. Let me ask the gentleman this question: If there were one hundred voters turned away why did you not bring up one of those one hundred to testify that he offered his vote and that it was not received?

Mr. CONVERSE. In the mouth of seven witnesses the truth ought to be established.

Mr. MILLIKEN. But the seven witnesses were spectators; they were not men who offered their votes and had them refused.

Mr. HEPBURN. I desire to ask my colleague on the committee [Mr. CONVERSE] one question.

Mr. CONVERSE. Does this come out of my time or the time of my colleague [Mr. HART]?

The SPEAKER *pro tempore*. The time of the gentleman from Ohio [Mr. CONVERSE] is running.

Mr. CONVERSE. I expressly yielded the floor and consented to answer these questions only on the condition that the time should not be taken out of my hour.

Mr. HEPBURN. Answer me one question, if you please. Can you tell me where I can find the testimony of ex-Senator McDonald, in which he says that any one person was turned away?

Mr. CONVERSE. He says that more than a dozen were turned away. I will find it and show it to the gentleman.

The SPEAKER *pro tempore*. To whom does the gentleman from Ohio yield?

Mr. CONVERSE. I reserve the residue of my time.

Contested-Election Case—Wallace vs. McKinley.

SPEECH

OF

HON. WILLIAM H. McKINLEY, JR.,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 27, 1884.

The House having under consideration the contested-election case of Wallace vs. McKinley—

Mr. McKINLEY said:

Mr. SPEAKER: I had intended to discuss this controversy in detail and with some elaboration; but two days have been already occupied in a most careful and painstaking discussion of all the propositions involved in this contest; and owing to the lateness of the hour and my desire that this case may be concluded to-night I shall content myself with occupying not to exceed five or ten minutes. It would be useless for me within that time to undertake to review the testimony in the record or the law which should govern all of the questions involved. I only ask from this House, the majority of which is opposed to me politically, to administer in this case the law and the precedents which they have always administered in the past and with those precedents determine whether the contestant or the contestee has a majority of the votes in the eighteenth Ohio district. Following the precedents long ago established by the Democrats in former Congresses and in other cases, and conceding to the contestant all he claims and much more than is allowed him by a committee of his party friends, and my majority and election to the Forty-eighth Congress is as certain and sure as that of any gentleman occupying a seat in this House.

I rise more particularly to say, and indeed it is about all I desire to say, that I claim nothing from technicalities. I would not if I could retain my seat one hour upon a mere mistake or technicality or inadvertence of election officers. And I say to this House that if it be necessary to find that I am entitled to my seat to throw out the 10 votes in Carroll County which upon the face of the returns appeared to be an error in the count against the contestant—if to give me my seat you must invoke those 10 votes, and deduct them from the contestant, then I do not want my seat in this House. Although there is no legal proof that this is not an error and although my friends have argued that part of the case in the light of the law, I desire here to say to the majority and to the minority if it becomes necessary to deduct those 10 votes from the contestant to give me the seat, then I do not want it and would not have it.

I desire to say another thing, Mr. Speaker, and that is, if my right to a seat in this House depends upon the rejection of the 7 votes which appear upon the face of the returns as cast for "John H. Wallace," "W. W. Wallace," or "W. H. Wallace," no matter what the law in its strictness might hold, then I do not want my seat on the floor of this House. For although there is no testimony whatever to show that these names, differing from the name of the contestant as they do, the names of different persons designating different individuals, are entitled to designate the contestant, yet in my judgment the citizens of the eighteenth district who polled those 7 votes intended that they should be cast and counted for Jonathan H. Wallace, the contestant in this controversy, and I want them, notwithstanding the absence of any proof to that effect, added to his vote, and the will of the voter, as I believe it, thus subserved.

Nor, Mr. Speaker, do I make any point as to the odd spelling of the names found in the ballot-box in Fairfield Township to the number of 11—the Wolac, the Walce, the Waal. If this House shall decide, if the judgment and consciences of members on this floor shall determine, that that recount is of value and shall have weight in this controversy, then I make no point that the voters misspelled or failed to spell properly the name of the contestant.

So I say, Mr. Speaker, that in all this controversy—I say to my friends on this side, I say to my friends on the other side, I say to my political opponents on the other side, that I invoke no technicality or legal quibble to retain my seat in this House. But I insist that, conceding every one of these votes, conceding the entire 23 votes which appear upon the face of the return, conceding that there was no error in Carroll County, and even conceding the 11 votes in Fairfield Township, and every other claim of contestant, I still have an unquestioned majority of the votes cast in the eighteenth district of Ohio on the 10th of October, 1882, and am justly entitled to retain my seat.

Now let me for a single moment revert to the Fairfield Township recount, for it is a matter in which you are all interested. You will establish a precedent to-day that may be for good or that may be for ill—a precedent which may come back to harass you in the future. Why, sir, what is a recount? A recount is counting over again the very same ballots that were cast by the voters and found in the box the night of the official count. That is what a recount is; that is what a recount means. It is counting again the identical ballots; because if you have not the identical ballots, identical as to names and identical as to numbers, then there can be no virtue in a recount. Now, how was it with Fairfield Township? Why, sir, everybody admits—the contestant in his brief, the gentleman from New York [Mr. ADAMS], and I believe the gentleman from Georgia [Mr. TURNER], the chairman of the Committee on Elections, in their arguments, all admit that there were 5 less votes in the box on the night of the recount than there were on the night of the official count. Does not that destroy the virtue of the recount?

There are 5 ballots gone nobody knows where. Those 5 ballots stand unexplained. Nobody undertakes to account for them. The very confession that the contents of that box on the day of the recount differed from the contents of the box on the night of the official count—that very confession makes a recount absolutely valueless and without effect. I beg gentlemen to remember that fact, which is sufficient to wholly destroy the pretended recount if there were no other discrepancies in the contents of that ballot-box. But in addition to that there were 4 more ballots for the Greenback candidate for Congress found in the box on the night of the recount than were in it on the official count. There was 1 less ballot for me found at the recount than was given to me by the official count. For whom were these 5 votes cast that were missing? Were they for the contestant? Were they for the contestee? One of them evidently was for me, because the recount finds 1 less ballot in that box than the judges of the election gave me on the night of the election. Then in addition to that there was 1 vote that all the witnesses, judges, and clerks identify as a ballot with the name of the contestant and the name of the contestee both on the ballot in the box on the night of the official count, and that ballot was not found in the box on the night of the recount. So that the whole virtue and weight and integrity of the recount was destroyed.

But the distinguished chairman of the committee seems to rely not so much upon the recount in giving these 11 ballots to the contestant as he relies upon the testimony in the case. He says that a number of witnesses testified there were ballots in that box not counted for the contestant. Carpenter puts it from 7 to 13. Now, let me ask the judges on this floor, the men who are to act upon this case, shall it be 7 or shall it be 13? For the witness says there were from 7 to 13. Which number will you adopt? Mr. Holloway says there were from

3 to 4. Shall it be 3 or shall it be 4? You are to be the judges, and how will you determine it. Crooks swears there were 6 ballots in that box not counted for Wallace. And so, all the way through, the witnesses disagree as to the number, only one of them putting it as high as 13, and one as low as 3. No two of the witnesses agree; and you gentlemen are to determine from that kind of testimony how many ballots are to be added to the contestant and how many taken from the contestee. I submit to you that it would be unsafe, that it would be unwise, in any election case to permit such testimony to overthrow the solemn findings of the official count. I care not whose case it is, to undertake either upon a recount such as I have described or upon the testimony of a character such as I have disclosed to determine, as it might in this case, whether the contestant or contestee is entitled to a seat on this floor, would be establishing a dangerous precedent even as a party necessity.

Now, Mr. Speaker, that is all I desire to say. In every one of the recounts which we invoke the exact number of ballots was found in the box equal to the number of names on the poll sheets. There is no discrepancy whatever, no suspicious or contradictory circumstances manifest, none raised by the proof. And yet if you will give me the votes on the recounts made in accordance with law, made from boxes kept in strict accordance with the statute; if you will give me the recounts that have not a taint of suspicion upon them, and then take from the contestant the unquestioned illegal votes that were cast for him, giving to him every vote that he claims, I will then have a certain and fixed majority as a Representative in the Forty-eighth Congress.

I will not stop to review what my colleague from the Cincinnati district [Mr. FOLLETT] has dragged into this case; I will not rake up the fouling dust of the campaign. But I was surprised that the gentleman, after nearly an hour's discussion of this important case, upon which he was to pass as a judge, could give no better reason for unseating me except that at some time and somewhere, upon some public rostrum, I had declared that I had voted to seat Republicans, and that my record for nearly eight years in this House showed that I had voted to seat Republicans and to unseat Democrats. I will not stop to pay any attention to that sort of argument; it is beneath the dignity and consideration of a tribunal like this. The record I have made in this House upon that and all other questions is a part of our public records, and I am not ashamed of nor would I blot out any portion of it. [Great applause on the Republican side.]

Now, Mr. Speaker, that ends all I have to say, for I want the vote to be taken and this case to be decided. I thank this House, the members on both sides of it, for the attention and courtesy with which they have listened to me. [Great applause on Republican side.]

The Indebtedness of the Pacific Railroads to the Government.

SPEECH

OF

HON. GEORGE W. CASSIDY,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 18, 1884.

The House having under consideration the bill (H. R. 6771) to amend an act entitled "An act to amend an act entitled 'An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes,' approved July 1, 1862," approved July 2, 1864—

Mr. CASSIDY said:

Mr. SPEAKER: No doubt the House has realized already from the discussion had that this is a very intricate and interesting subject, and one involving a bewildering amount of statistics and presenting many phases when properly viewed in all of its bearings. Fortunately we are not here to sit in judgment on the past history of these Pacific railroad corporations. They may have been guilty of every crime in the Decalogue, as some gentlemen seem to insist they have been, yet that cuts no figure in the consideration of the pending legislation. We are here to deal with practical questions regarding their present status and relation to the Government, and their ability to meet and discharge the vast debt due the United States. How best to get the money due the Government is the sole question.

The distinguished gentleman from Texas [Mr. THROCKMORTON] for an hour on yesterday rolled off figures by the million connected with these corporations and the immense sums due by them to the Government. I beg to assure him that all of those figures are just so many arguments why we should proceed judiciously, cautiously, and practically to secure the payment of this debt. The greater the amount the greater the necessity for prudent rather than violent means in looking to its collection.

The gentleman from Kentucky [Mr. THOMPSON] also occupied the floor for more than one hour, and yet he absolutely failed to advance a single reason why the operation of the sinking fund should be longer continued. His entire argument was directed to a criticism of the Post bill, so called. Indeed, he admits in his own report to this House that the Thurman sinking-fund act has proven a most lamentable failure, an opinion in which all must concur who investigate the subject fully and impartially; and still he maintains that by adding 10 per cent. to an admitted failure—raising the requirements of the sinking fund from 25 per cent. of the net earnings to 35 per cent of the same—he can make a law entirely perfect and altogether lovely. Such a proposition to my mind is too preposterous for serious thought or elucidation.

It is not my purpose to defend in detail any bill. I care nothing for details. I stand for an idea, for a principle. It is my province to present to the House the two systems proposed by the committee and to commend to the favorable consideration of members that which in my judgment will best conserve the interests of the Government.

I have said and everybody admits that the Thurman sinking fund is a failure. It has been in operation since 1878, nearly eight years, and yet scarcely a step has been accomplished under it toward the payment of this debt. The Union Pacific has practically ignored its provisions, and were it to stand for one hundred years the vast sum due the Government could not be collected under it. If it had been found effective and successful there would be no occasion now to attempt to amend it or to substitute some other system for it. The very fact that it is a failure calls for action at the hands of this Congress. Wherein it has failed, and the cause of the failure, I shall hope to point out further along; but I may be permitted to say at this moment that it has failed because based on a wrong principle.

Let me ask the gentleman from Kentucky [Mr. THOMPSON] what he hopes to accomplish by the proposed enlargement of the sinking fund. Under the most favorable auspices, with the earnings of the roads running as high as they do now—and every one knows that they have been steadily decreasing for three years past—will there not be due at the maturity of the debt in 1898 nearly $100,000,000? What are we to do when that period shall have arrived, and with a prior mortgage on the roads equal in amount to that held by the Government and maturing at the same time? In all seriousness I ask if this sinking fund will do to lean upon in the future when these great sums shall have become due and payable? Will we not then be brought face to face with a very serious problem involving one or two alternatives, namely, the abandonment of the debt altogether, or the payment of nearly $100,000,000 prior in lien to the Government and the taking of the roads?

If this House desires that the Government shall embark in the business of owning and operating railroads, I insist that that phase of the question shall be duly considered as we proceed. And it should be considered also with reference to the cost of the undertaking. If we are going into the railroad business at all, I beg to assure gentlemen that a new transcontinental road can be built for one-half the money it will require to clear away the indebtedness on the present system. Particularly is this true of the Union Pacific.

In this connection and without any infringement of the rules of the House, but as a matter of legislative record, I may be permitted to say that the Senate Judiciary Committee has reported a bill which abdicates the old sinking-fund system and adopts practically the same idea if not the same terms as are contained in the Post bill in dealing with this question. This, I take it, was done after due investigation, and may be regarded as an estoppel on the sinking-fund plan no matter what we may do here.

As I said in the outset, I am not contending for details in this matter. I shall present only the idea, and if the House should agree with me in its judgment it will be for the House to perfect such a bill as will meet this conclusion. I have no pride of opinion about any of these measures. I am here earnestly and honestly desiring the full payment of the last dollar of this colossal debt in the shortest possible time and with due regard for the rights of all concerned. I say that the continuance of the Thurman sinking fund—and I can not be mistaken in this view—means the ultimate ownership by the Government of these roads at double their worth, or the total loss of the entire sum due from these corporations to the Government within the lifetime of the subsidy bonds. It is absolutely impracticable to proceed under that act with any hope of securing the debt. This House may not be prepared now to accept my views of this question, but I am more than sanguine when I predict that it will not be two years before it is accepted and demanded as the only rational solution of the matter at issue. There can be no escape from it.

Now, what are the facts in this case? I have here a great many figures and tables bearing upon the different aspects of the question, but I shall endeavor to get along with brief reference to a very few of them. The question is one of too much importance to be passed over hastily, and yet I shall try not to weary the House with too many statistics.

In 1862 the Government by act of Congress loaned its credit to certain railroad companies, chief of which were the Union Pacific and Central Pacific, in the sum of $64,000,000. These bonds were to run thirty years at an annual interest of 6 per cent., making a total debt at the maturity of the bonds in 1897–'98 of $64,000,000 of principal and about $116,000,000 of interest, or a grand total at maturity of $180,000,000

in round numbers. That represents the indebtedness of the entire system in 1898.

In 1864 a second act of Congress gave the companies the right to mortgage their roads and franchises for an amount equal to that held by the Government, the claim of the Government thereby becoming a second lien or mortgage. So in considering this question we must always keep in view the fact that the Government holds but a second mortgage, and that there is a lien of equal amount bearing equal interest in advance of our claim. This is why we are confronted with so many serious complications. Any summary proceeding in asserting the claim of the Government may precipitate a foreclosure by the parties holding the first-mortgage bonds, and thus compel the Government to step in and pay off these prior liens or waive its debt entirely. Thus far the companies have regularly paid the interest on the first-mortgage bonds, and I am clearly of the opinion that it is better to leave them in a condition to continue to do so than to precipitate a crisis.

Going back now to 1878, it was at that time that Senator Thurman (a gentleman for whose great ability and integrity and patriotism, by the way, I entertain the most exalted admiration) devised, and after a great struggle enacted into law, what is popularly known as the Thurman sinking-fund act. That was an act which attempted to obtain and place in the Treasury of the United States in the nature of a sinking fund for the protection of the interests of the Government, long in advance of the maturity of the debt, 25 per cent. of the net earnings of these roads. The author of the act is more deserving of commendation for his great legal ability in formulating a law that would reach out and take hold of a debt before it was due than for the practical application of provisions of material benefit to the Government. It may be possible, however, that with the lights then attainable the Thurman sinking fund was the wisest thing that could be done. With our present lights it is puerile and absurd, and I say this with full knowledge of the great reverence, not to say awe, which this measure has inspired in the minds of many people in this country.

The validity of the Thurman sinking fund was tested in the Supreme Court of the United States, that tribunal holding that the Government had no legal right to apply the funds of these corporations to the payment of any portion of the debt, principal or accrued or accruing interest, prior to the maturity of the whole debt, principal and interest, in 1898; but that the Government might set apart a portion of the earnings of the roads for the better protection of the mortgagees, the said sum so diverted to be held subject to the rights of the lien-holders respectively in their proper order, not making the Government preferred, and that no part of the money thus withheld should be regarded as a payment on any portion of the debt of the Government, but that the same should be surrendered, every dollar of it, should it be required to discharge the obligations of the companies prior in time to the lien of the Government. As understood by the lay mind, this was substantially the decision of the court, the opinion being sustained by five of the judges to four dissenting. I digress to say that I have been through them all, and if I am any judge of legal questions the dissenting opinions are by far the abler.

Late additions to the supreme bench render it almost certain that the original opinion would be overthrown were the opportunity presented. This is another very strong reason why we should select some other mode for the settlement of this debt. The small sum now held in the Thurman sinking fund is subject to the claims of the holders of the first-mortgage bonds under the decision of a majority of the court, and were that opinion reversed, as it is likely to be if we make another case to go to them, the entire amount would be swept away and we should be precisely where we started—with not one dime applicable to the payment of the debt, principal or interest, in the sinking fund.

It was the theory of the sinking fund, and the law so directed, that the money paid into it from time to time by the companies should be invested in 5 and 6 per cent. bonds of the United States, the money being regarded as worth about that rate to the companies from which we were taking it in advance of its becoming due, and thus by an investment in these interest-bearing bonds for the sole benefit of the companies, and not for the Government, we would work no loss or injury to the companies by reason of the sinking fund which we had set up. Here again occurred another mistake which could not have been foreseen. The whole theory upon which the validity of the Thurman act was upheld by the Supreme Court was that we inflicted no injury on the companies by requiring them to anticipate the payment of a debt not falling due until 1898, either principal or interest. As regards the practical results of the sinking-fund investments, the companies certainly have just ground for complaint. The 5 and 6 per cent. Government bonds soon rose to such a rate of premium in the markets of the world that the operation of the sinking fund was practically defeated.

I have here among my papers, and it is official, from the Treasury Department of the Government, a statement showing how the sinking fund has operated as regards the companies. This statement relates more particularly to investments made for the Central Pacific, though the same state of facts applies with equal force to the other companies. To get at this matter very briefly: the Central Pacific has paid in premiums for the investment of its share of the sinking fund $178,000 and has received back in interest to date but $166,000, making a clear loss to the company under this beneficent sinking-fund act of $12,000; nor has the Government been correspondingly or in any degree benefited by these operations. I say, therefore, that a law which is clearly shown to have worked so unsatisfactorily ought not to be longer relied upon in the settlement of this account. This great Government can not afford to abridge the obligations of a contract, whether the party whose rights are invaded be a railroad corporation or a private individual.

But my opposition is not based alone on the doctrine that the sinking fund has not worked equitably, but upon the broad ground that under that system it is impossible to collect the money due the Government. The law, because of fundamental defects, is incapable of successful administration. Changing conditions will render it more and more difficult of administration. Based as it is on a percentage of the net earnings, anything which affects the volume of business transacted by the roads must of necessity affect the amount of money going into the sinking fund. Business diverted to rival or parallel roads not subsidized by the Government can not fail to lessen our revenue from the subsidized lines. From this cause alone, that portion of the debt due from the Union Pacific Railroad is to-day in extreme peril. This fact I can not too strongly impress upon the attention of the House.

Why, Mr. Speaker, there has been an enormous falling off in the earnings of the Union Pacific road, and the decline is still going on. For the first five months of the present year, compared with the same period in 1883, there has been a decrease in net earnings of nearly two millions of dollars. That company seems to be trembling on the very verge of bankruptcy. There was a time when it might have met its obligations to the Government; to-day it is so loaded down with incumbrances of one kind and another that it seems impossible that it should ever shake them off. Within the last week Government experts have been to Boston to examine the books of this company. I have before me their report. It is too voluminous to be read and digested in detail. But I can assure the House that it makes some very important disclosures. I have had but little time to study it, it having been furnished to me within the last hour, but I am prepared to present its more salient features. Give me your attention while I show you something of the condition of this company:

The falling off in surplus earnings of the entire system for the five months ending May 31, 1884, as compared with 1883, was $1,983,000.

The revenue and expenditures of the entire system for the same period show a deficit of $729,000.

To enable the company to pay the July quarterly dividend of 1¾ per cent. the company will have to borrow or draw from any surplus on hand about $1,400,000.

The total debt of the company March 31, 1884, including capital stock outstanding, was $223,975,889.34.

Think of so vast a sum—five times greater than the national debt at the beginning of the war! Included in this amount is a floating debt of $11,409,099.32.

The assets show a surplus over the liabilities (including land sales) of $15,224,684.61, or, including land sales, of $4,311,639.55.

The loss to the company in operating "branch lines" for the first three months of 1884 was $347,826; for the corresponding three months of last year the loss was only $3,000.

There we have it: a concern rotten from top to bottom, with a debt as large ($223,975,889) as many of the governments of the earth. This company owes the Government to-day $65,000,000. It owes other creditors, whose liens are prior to that of the Government, about sixty millions more in round numbers. Our security rests on something like 1,400 miles of railroads thus encumbered. The line from Omaha to Ogden can be duplicated to-day, every inch of it, for $40,000,000. We could build a new road and save $20,000,000. But if we should pay off the prior liens and take the road for our debt, it would represent a cost to the Government of more than $120,000,000. Are we prepared to invest this money in a property that is not worth to-day $50,000,000?

The trouble grows out of the fact that the road has been parallel its entire length. It has been stranded by rival lines competing for its business. The completion of the Northern Pacific cut off most of its Montana and Oregon business. The Chicago, Burlington and Quincy competes for the Colorado and Denver business. The Atchison and Santa Fé and Southern Pacific get a share of the traffic, while the Denver and Rio Grande absorbs a large part of the Utah business and draws heavily on the overland commerce by its through connection at Ogden. In other words, there are now five railroads to do the business formerly handled by one. I do not say that this company may not again become prosperous with the settlement and development of the country along its line, but time will be required to extricate it from its present embarrassments.

I have said that under the percentage system we can never recover this great debt. It will become manifest to any one who will investigate this question that the Government is placed at a great disadvantage under the percentage system. This must follow inevitably from the fact that the other side keep all the books. We are compelled at every annual settlement to accept as the net earnings whatever sums these corporations may choose to return. And just here is the question which gives rise to all the trouble and litigation. Disputed claims

amounting to $8,000,000 are to-day being litigated between the Government and the Union Pacific Company. "Net earnings" is too indefinite a term; the officers of the Government and the companies can never agree as to what constitute net earnings. Should the interest on the first-mortgage bonds, new construction, and new equipment be deducted in arriving at the net earnings?

These are the questions that lead to endless disputes and litigation, and through it all the sinking fund is cheated out of the greater portion of the money which should go into it. These corporations have construed the law to suit themselves, and thus far the Government has been powerless to assert and enforce its claim to the money annually called for by the act of 1878. It is not so much that they dispute the binding effect of that act as it is that they set up claims under it regarding their net earnings which can not be accepted as correct without practically defeating the requirements of the sinking fund itself. No change in the percentage of the net earnings demanded by the Government will remedy or can remedy this defect in the law. The vice is fundamental and inherent. All railroads in dealing with each other treat on a basis of the gross earnings, which should have formed the basis of settlement in the Thurman act.

But a better plan still is to require the payment semi-annually of a fixed sum. That is what the Post bill does, and in this regard if no other it is a vast improvement on the old system, which it is sought here to continue for no higher purpose that I can discern than that it has proven a conspicuous failure.

Why, Mr. Speaker, let me further illustrate how the percentage plan works when practically applied to these corporations. The exact number of miles is not necessary to convey the idea clearly to the House. In round numbers, then, the Government aided the Union Pacific with bonds to build about 1,400 miles of road. It aided the Central Pacific to the extent of something over eight hundred miles. Our security and our interest in the net earnings are confined to these aided sections, and no more. This has been determined by the Supreme Court of the United States. To-day the Union Pacific is operating over 4,000 miles of road, or 2,500 on which the Government has no claim and to any portion of the net earnings of which it can set up no claim under the decision of the highest tribunal in the land.

Nay, more, under the decision of the same court we must even pay cash for the transportation of our mails, troops, and supplies over the non-aided portions. But the whole of the Union Pacific system of 4,000 miles is conducted under one management and one set of books, and the earnings of the entire system go into a common fund of the company. Here, then, comes the interesting process when the Government's quota of 25 per cent. under the Thurman act, as that law now stands, is to be ascertained. It usually turns out that the Government's 1,400 miles has not earned as much in proportion as the rest of the system. And who can draw the line on these earnings? Who can say whether or not full and fair returns are made? And where is the check placed for the protection of the Government in regard to this very important matter? Is it saying too much to assume that the Government's 1,400 miles is made to bear more than its just share of the cost of maintaining and operating the whole system? The utter failure of the Thurman sinking fund furnishes the answer to all of these questions. The whole scope and plan of the law is founded in error and false principles, and any amendment thereto which has for its object the continuance of the percentage feature must, beyond peradventure, prove alike abortive and disastrous to the interest of the Government. I would reverse this whole plan; I would require the payment of $1,000,000 every six months, or two millions a year, without regard to net earnings or where the money came from. You might increase the sum and call for more annually, if you thought proper and believed that the companies could afford it, and still be left in position to take care of the lien in advance of the Government's.

As I have already remarked, I care nothing about the details of the bill, though I have my opinion as to what they should be, but I do insist that the old and futile percentage system should be at once and forever discarded. My plan would of course necessitate an extension of the debt. It must be extended under any plan. The Thurman act as it stands to-day would not discharge the debt in a century, The proposed increase of 10 per cent. will leave due and unpaid at the maturity of the bonds in 1898 the principal of $64,000,000 and more than $30,000,000 of interest. To pay the interest alone, leaving nothing but the $64,000,000 of principal due at maturity, will require 85 per cent. of the net earnings of the Central Pacific and more than 50 per cent. of the net earnings of the Union Pacific and Kansas Pacific. With these large percentages we would still be compelled to grant an extension for the $64,000,000 of principal in 1898. But if we call for the large percentages which I have shown to be necessary to meet the interest account, what then is to become of the first-mortgage bonds and the interest thereon, equal in both principal and interest to our own claim? Would the 15 per cent. of net earnings left in possession of the Central Pacific and the 45 per cent. left to the Union Pacific and Kansas Pacific enable these companies to protect the interest of the Government, as against the first mortgage, prior in time to the mortgage of the Government? These are the serious questions to be met and solved by this House at this time. I have no hesitancy in declaring that if the percentage system is to be continued at all it should be largely increased with respect to all of these roads. But that, in my judgment, is not the way to get the debt—rather, it is the way not to get it.

And this brings me to say that the principle contained in the Post bill is unquestionably the correct principle. It ignores the percentage plan *in toto* and requires the payment of a specific sum semi-annually, equaling about two millions per year. At this rate the whole debt and interest will have been paid in forty-six years from 1898. You can shorten the time by increasing the amount of the semi-annual payments if you like. It is not an extension of the whole debt forty-six years, as some gentlemen would like to convey to the House, because at the end of the forty-six years the last dollar of the debt will have been fully met and paid if the law be complied with. The average extension would be but twenty-three years. Under the other plan there can be no reasonable guarantee that the last of the debt will be paid in sixty years or one hundred years. With the facility with which railroads sometimes pool their earnings I can readily see how it would be possible for net earnings to disappear altogether from the subsidized lines. An understanding or contract between the rival lines would easily bring about this result.

But the best feature of the Post bill is that which extends the statutory lien of the Government over 5,600 miles of road not now held as security by the Government, predicated as it is on the consent of the companies in consideration of the extension granted for the payment of the last installment of the debt. This, to my mind, makes the debt absolutely safe and insures the prompt payment of every dollar of it, because the bill provides that a default in the payment of any one of the semi-annual bonds makes that moment the whole debt due and payable. It will be noticed by members that it also provides that such of the companies as refuse to accept this plan of settlement are continued under the operation of the Thurman sinking-fund act at the same increase of percentage as is fixed in the other bill. Thus it will be seen that on the percentage plan the Post bill is quite as good and quite as perfect as the other. It is immeasurably better and safer and simpler in those particulars, requiring the payment of a specific sum annually and adding to our security more than double the number of miles of road now held as security by the Government.

But, Mr. Speaker, I have a still greater and broader objection to a continuance of the percentage system, especially if the percentages are to be materially increased, as they should be if we are to continue on that line at all. It affects directly a matter of paramount importance to the people of the Pacific coast. The great demand of our people is lower rates of transportation. If this debt is paid at all it must be paid by the people of the Pacific coast, by the patrons of the roads. You gentlemen of the East will not contribute a dollar toward its payment. The debt is now the property of all the people of the United States, and I say frankly that I would rather all the people should watch and wait for their money than that my people should be further oppressed to the end that the debt may be promptly paid at maturity. Charity begins at home, and it is my province as it is my pleasure to look out for my people and my section as against the rest of the world. The more you take from the railroads the more in turn the railroads will take from the people. The higher you fix these percentages the deeper these roads will dive into the pockets of the people who sustain them with their patronage.

The main question involved here is whether the people of the Pacific coast shall liquidate this vast debt in fourteen years or forty-six years; whether you shall make lower rates possible or continue indefinitely the present high rates. I warn the delegation from California that this is a question affecting the material progress of their State. A vote to continue the system of a percentage of the net earnings is a vote, directly and emphatically, against any lowering of transportation charges. See how the system is bound to work in practice. The percentage plan as proposed here means in plain terms that 35 per cent. of all the money paid by our people to the railroads for freights and fares must go into the Treasury of the United States in liquidation of the enormous debt due from the railroads to the Government. The larger you make the percentage the greater the inducement held out to the railroads to maintain high rates in order that the income from that portion left them may not fall below the present standard. That is the inevitable tendency of a continuance of the sinking fund based on a percentage of the net earnings. This might not be so bad if we could regulate their charges by law. But how are you going to do that? The Eastern member of Congress is more interested in the collection of this debt than he is in the welfare of the people of the Pacific coast.

Suppose you undertook here to cut down railroad charges, say, for purposes of illustration, 50 per cent., what would be the effect on this sinking fund and what Eastern member would vote for your bill? Would not a vote to reduce railroad charges 50 per cent. also be a vote to reduce the amount going into the sinking fund by just one-half? Who then would support your bill under these circumstances, and how can you hope for relief for your people when this percentage plan is once fastened permanently on the country. I say again to the members from California, and to the whole people of the Pacific coast, that lower charges for transportation of all kinds is a question of vastly more importance to them than anything affecting the payment at ma-

turity of this debt due to all of the people of this country. I desire that the Government shall get its money, but I am not desirous that my people shall be unduly and unwarrantably taxed to pay it; and I assert again with emphasis that any scheme for the payment of this debt based on a percentage of the net earnings means the continuance perpetually of high rates and the present onerous burdens borne by the people of the Pacific coast—a thing that shall never be done, by the Eternal, with my consent or concurrence. Would that all men possessed sufficient moral courage to do the right thing on every question affecting the public weal.

A day has been assigned the Committee on Commerce to consider the bill regulating interstate commerce, and I have steadily during this Congress and the last voted to take up that subject, but it must be manifest to all that we can not legislate intelligently on the question of rates as applied to the Pacific railroads until we shall have determined the manner of the settlement of this great debt. It is to remove every possible obstacle standing between the people of the Pacific coast and lower rates that I advocate the immediate abolition of the percentage plan and the substitution for it of the payment of a specific sum annually without any regard whatever to earnings or whence the money comes, within a just and proper recognition of the rights of all of the parties concerned, including not alone the Government, but with due regard to the demands of all other creditors of these corporations. But the first step looking to lower rates is the final adjustment of this debt on conservative and rational principles.

Mr. ANDERSON. Do I understand your argument to be that we ought not to increase the percentages because we might ultimately lose the debt? May I ask whether your committee has made any report on my bill appointing a receiver to take these roads in hand for default in payment of interest?

Mr. CASSIDY. That is a collateral issue.

Mr. ANDERSON. It would secure the Government.

Mr. CASSIDY. It does not apply to the case in hand at all, and has no connection with it. That is a Kansas idea, which cuts no figure in this argument. But I may say for the information of my friend from Kansas that the Attorney-General has ample power under the law as it exists to-day to protect every right of the Government in the event of the companies defaulting in the payment of the interest on the first-mortgage bonds. Up to this time none of the companies have defaulted on account of this first interest, and to assume that there is danger that they will become so reduced as to compel them to do so is one of the very strongest arguments that could be advanced against the increase of percentages attempted here. The gentleman's question is an argument against the bill instead of one in favor of it.

I have been urging all along that the Thurman sinking fund has fallen far short of its purpose; nobody is found who will attempt to maintain that it has been a success. On the contrary, under its operation we have scarcely accumulated a dollar in the Treasury from any company that did not voluntarily comply with its provisions. In this connection it gives me great pleasure to say that the Central Pacific Railroad Company has complied strictly with the letter of the law; that it has paid every dollar required by the Thurman act, and is not to-day in arrears a single dollar on account of the sinking fund. In addition to this, it has established a sinking fund of its own into which it has paid about $10,000,000 to meet and discharge the first-mortgage bonds, which are prior in lien to those of the Government.

Of course gentlemen will readily understand that any provision looking to the payment of the first-mortgage bonds is the same in effect as paying the Government, because in that way our mortgage becomes first and the security of the Government will be beyond any reasonable question. So far, then, as this corporation is concerned, in the matter of the debt it comes to Congress with clean hands. There is no evidence anywhere that it seeks to wreck the property and then unload it on the Government. The Central Pacific Railroad Company has a constructive residence in my State and is one of the largest tax-payers of that Commonwealth. It is simply just, therefore, that it should receive at my hands fair consideration during the progress of this debate, and I repeat that it is deserving of honorable mention for having complied promptly and strictly with every demand made upon it by the Government of the United States.

Mr. BUDD. May I ask the gentleman a question?

Mr. CASSIDY. Yes, sir; if it is pertinent.

Mr. BUDD. You say the Union Pacific has been losing money.

Mr. CASSIDY. I did not say anything approaching that, and no part of my argument has been based on any such theory.

Mr. BUDD. I so understood you.

Mr. CASSIDY. Well, you did not understand me correctly. What I did say was, that by reason of the construction of parallel roads its business had greatly diminished during the last two years.

Mr. BUDD. I will ask if they are not paying 14 per cent. per annum upon their capital stock?

Mr. CASSIDY. I have no doubt that they have been paying larger dividends than they should have paid, particularly as they are so greatly in arrears to the Government. I strongly suspect also that they have been selling their lands and dividing the proceeds among their stockholders; but they have not been paying 14 per cent., but 7 per cent.

Mr. BUDD. No, 14—7 every six months.

Mr. CASSIDY. The gentleman is simply mistaken about that, as every one knows who has investigated the affairs of this company.

Mr. THOMPSON. The gentleman from Nevada is right; 7 per cent. is the correct figure.

Mr. CASSIDY. The Union Pacific Railroad Company has been paying 7 per cent. per annum for many years. A portion of this has been paid out of the earnings of the road and a portion, perhaps, out of the sale of the company's lands. I do not believe that they have at all times in good faith earned the dividends which they have paid, and I do not believe that they should pay any dividends until they have paid the debt which they owe the Government. Certainly they are in no condition at this time to pay dividends, whatever they may have done in the past. The report of the Government experts, which I have before me and to which I referred a little while ago, shows that they are $1,400,000 short of their usual 1¾ per cent. quarterly dividend for July. For the information of the House, I shall ask to publish this entire report of the experts as an appendix to my remarks.

And now, Mr. Speaker, let us for a moment vindicate the truths of history. I undertake to say, sir, that the building of this great transcontinental railway was one of the grandest achievements of the nineteenth century. All honor, then, to the master-mind that conceived it; all hail to the matchless energy that prosecuted it to a successful issue. By its construction six States and Territories of this Union have been made possible; a highway for the rich commerce of the Orient has been provided; the vast wealth of the mines of the West has been laid at your feet; the Indian question has been settled, and an indissoluble union between indestructible States has been established, thus binding the remotest sections of our country together in affectionate regard one for the other and insuring peace and concord through all the coming ages. All talk of a "Pacific republic," if it ever had any serious existence, disappeared at once and forever with the inauguration of this great enterprise. To-day five hundred million dollars' worth of cattle feed on the nutritious grasses of the Rocky Mountains because of the facilities afforded by this road for reaching the markets of the country, thus supplying cheap beef to all of the people; for grass-fed beef means cheap beef.

Mr. BELFORD. I desire to ask the gentleman if the public lands were not entirely worthless before the construction of this road.

Mr. CASSIDY. I was just coming to that. Certainly they were utterly valueless without the road. Some of them are not worth much yet; but if the road had not been constructed, no part of them could have been sold for any price whatever. They were destitute of value because there was no demand for them. But there were other advantages secured which I was going on to state.

Why, the experience derived from the examples of engineering skill alone was worth double the cost of the road. It must not be forgotten that prior to the construction of this road the belief was prevalent everywhere in this country that the great mountain ranges presented insurmountable barriers to successful railroad building. Yet we have seen the Rocky Mountains scaled at an altitude of 8,000 feet above the level of the sea, and the great Sierra pierced whose snow-capped crest rises more than 13,000 feet above tide water.

Thus it is that railroad building has been promoted throughout all the mountainous sections of this country. And just here let me give credit to the Republican party for the passage of the Pacific Railroad act. Barring the grant of land which it carried, it is one of its brightest achievements during the whole of its twenty-four years of power. Gentlemen will recall that this bill was passed just fourteen days after Maximilian had set up his empire in Mexico. The building of the road under the circumstances, I state most unhesitatingly, was both wise and patriotic. Gentlemen must not assume either that this was altogether a bad bargain for the Government. The bonds loaned to the companies only netted them about 65 cents on the dollar, owing to the depreciated state of the Government's credit at the time. But the Government has a right to expect full payment, dollar for dollar, of the face of the bonds, with interest, including the many other blessings and advantages growing out of the investment. Prior to the construction of this great highway, let it not be forgotten, the annual expenditures for carrying the mails and transporting supplies for the military posts and the Indians on the plains aggregated $10,000,000. In 1857, when Johnston's army moved against Brigham Young, they ran as high as $18,000,000. Since the building of the road the yearly appropriations for the same service have never exceeded $2,000,000; a clear saving to the Government of $8,000,000 per annum, or more than $125,000,000 for the sixteen years since the road went into operation.

I followed, Mr. Speaker, the trackless desert across the continent many years before this enterprise was undertaken and I know something of the hardships and privations which the early pioneer was forced to endure in the far West. I know also with what zeal and earnestness we prayed for the early construction of this great national highway. There were no anti-railroad men in California in those days. Had a thousand millions of Government bonds been necessary for this great work, not a man in California would have opposed the outlay; and could such an alternative be presented to-day, I dare say that the people of that State would justify the expenditure of a like amount rather than dispense with their road.

Mr. Speaker, a moment ago, in complimenting the Republican party for the passage of the Pacific Railroad act, I made an exception in regard to the land subsidy. I believe that to have been a mistaken policy. It is my judgment that not one acre of the public domain should ever have been given to any railway or other corporation. I would have assented to $100,000,000 more in bonds if necessary to carry out this great project, but not one acre of the people's land should have been pledged for the success of the undertaking. The public lands should have been held as a sacred trust for the homeless and landless, and if I had my way about it to-day I would take back these lands at a fair price and apply the value of them on this great debt due the Government from these companies. I would allow the companies a fair consideration for them and then deal them out, as might be required, to actual settlers. That is the practical way to rid ourselves of a large amount of this debt and at the same time bring the Government back to its early policy on the land question, namely, that they should be held for the actual settler.

While I am talking about my Republican friends (and I have a right to criticise them now, because I complimented them a moment ago) I must say that I was not a little amused the other day to find them in their national convention at Chicago resolving in favor of the forfeiture of these land grants which they had themselves made, while on the same day and perhaps at about the same hour the Republican members on the other side of this House were filibustering to prevent the passage of a bill restoring one of these unearned grants to the public domain. I say I was amused at this display of consistency between the representatives of that party at Chicago and on this floor respectively.

Mr. WHITE, of Kentucky. Will the gentleman allow me to correct him? If I remember rightly the gentleman from Louisiana [Mr. ELLIS] of that side of the House led in that.

Mr. CASSIDY. Mr. ELLIS's matter was not the case to which I alluded. I had reference to the Oregon railroad grant.

Mr. FUNSTON. I ask the gentleman if it is not true that the Democratic party, before the Republican party had an existence, gave away 26,000,000 acres of the public domain to the railroads?

Mr. CASSIDY. To what railroads? Name one of them.

Mr. FUNSTON. To the States for the railroads. Did they not give the land to the States with the express understanding that it should be given to the railroads? And might it not be that the Republican party were trying to get back what the Democrats gave away?

Mr. CASSIDY. I am ready, sir, to join issue with you on this land question generally. Your party has squandered on railroad corporations an area of territory equal in extent to all of the New England States, New York, Pennsylvania, and Ohio combined, while every single acre that has ever been added to the national possessions, with the single exception of the Alaska purchase, since the Government began was acquired under Democratic administrations; and I most unhesitatingly and emphatically declare further, that the Democratic party, as such, never gave a single broad acre of the public domain to any private corporation under the sun. [Applause on the Democratic side.]

Mr. DUNHAM. May I ask the gentleman a question? Who gave the Illinois Central grant?

Mr. CASSIDY. It was given to the State, and the State in turn—no doubt, under a Whig administration—gave it to the railroad company.

Mr. KEIFER. Under the leadership of Stephen A. Douglas——

Mr. CASSIDY. One at a time, gentlemen.

Mr. KEIFER. Under the leadership of Stephen A. Douglas the first land grants were made to the railroads, and the Illinois Central was the beneficiary. While in form the grant was to the State of Illinois it was expressed that it was for the benefit of the Illinois Central.

Mr. CASSIDY. Produce the law. I repeat that it was given to the State, and the State in turn gave it to the railroad. The Democratic party in all of its history has never given an acre to any railroad corporation in the world, and still we acquired every acre over which the American flag floats to-day with the simple exception of Alaska.

Mr. FUNSTON rose.

Mr. CASSIDY. The gentleman will pardon me. I must decline to yield further. I have some other matters to submit to the House and I must go on.

Mr. COOK. Alaska is not land. It is only an iceberg.

Mr. DUNHAM. If the Democratic party acquired all of the public domain, perhaps they had a right to give it away.

Mr. CASSIDY. But they never gave an inch of it away. I would like to talk this matter over with my friend from Illinois [Mr. DUNHAM] but I have not the time just now, and he must excuse me when I insist on proceeding with the discussion of the measure under consideration. I have but an hour, and too much of my time has already been taken up with these side issues.

And now, Mr. Speaker, let us return to the main question. I have shown that the majority bill settles nothing; that it leaves the whole question of the debt in as bad condition as we find it to-day; that net earnings, by reason of circumstances which I have pointed out, are gradually but surely falling off and may soon disappear altogether, and that under the most favorable auspices the entire principal of $64,000,000 and more than $30,000,000 of interest will be unprovided for at the maturity of the bonds in 1898. No friend of that measure will attempt to deny that fact to this House.

Mr. THROCKMORTON. May I ask my friend from Nevada what the Post bill will do at the maturity of these bonds?

Mr. CASSIDY. It will bring into the Treasury substantially as much as yours, and besides it more than doubles our security for the payment of the whole debt.

Mr. THROCKMORTON. Oh, yes.

Mr. CASSIDY. I am no stickler for the strict letter of the Post bill. My chief contention is that it embodies the correct principle. My friend from Texas [Mr. THROCKMORTON] will hardly deny that the sums called for by the Post bill can be so enlarged as to bring to the Treasury of the Government more money annually than any other scheme yet proposed, and besides it is a final and definite settlement of the whole question. The majority bill amounts to nothing and settles nothing. From the very nature of the case it is a mere makeshift, temporary and transient in its character, and essentially devoid of every element of broad and statesmanlike purpose. The occasion is urgent that some system shall be devised whereby this debt shall be cared for and placed in course of sure and ultimate payment, but it is not as important that the Government insist on its money immediately if it could get it, which of course it can not, as it is that the security be made ample and certain. Pass any well-devised scheme that will secure the payment of the debt beyond doubt in any reasonable length of time, not leaving it open to the doubts and delays and failures of the past, which must be continued and repeated under the majority bill, and I shall be entirely satisfied. I have already stated that these roads are paralleled from one end to the other and that the business which formerly went over the Central and Union Pacific roads now goes in part over the Southern Pacific, which was not aided with Government bonds and from which, of course, we can get nothing applicable to the payment of this debt.

Mr. THROCKMORTON. Was not the Southern Pacific Railroad built out of the earnings of the Central Pacific?

Mr. CASSIDY. Suppose it was? What has that to do with this question? As a matter of fact I presume that some of the earnings of the Central Pacific went into the construction of the Southern Pacific; I can not answer positively as to that, because I do not know, but it is true that the Southern Pacific has a very considerable bonded debt of its own.

Mr. THROCKMORTON. It is true that it was built out of the earnings of the Central Pacific.

Mr. CASSIDY. I know that that has been alleged over and over again, but whether truly or falsely I have no means of knowing, nor do I care for the purposes of this argument.

Mr. THROCKMORTON. Everybody knows it to be true.

Mr. CASSIDY. Well, suppose it be true? What has that to do with this case? If my friend will permit me, the question is simply this: If we are to rely on a percentage of the net earnings, as under your bill, certainly we can not expect to get anything from the Southern Pacific, or from the Northern Pacific, or from the Denver and Rio Grande, or from the Chicago, Burlington and Quincy, because the Government did not grant bonds in aid of the construction of any of these roads. We must look entirely to the earnings of the Central and Union Pacific systems, for these are the only roads in which the Government is interested. It is for this purpose that I have directed attention to the fact that these Government roads are paralleled by other and non-aided roads. I do not mean to say (because that is a branch of the general question which I am not now arguing) that they are competing lines in the sense that competition affords lower rates to the people, but I do say that they are competing lines for business; they divide the business and as a necessary result lessen the volume of traffic that goes over the subsidized roads; and when you predicate a bill on a percentage of the net earnings of the roads aided by the Government, the parallel roads, by dividing and thereby reducing the business, become an important factor in estimating the amount that will go into the Treasury for the satisfaction of the debt.

Mr. GLASCOCK. Then, if I understand the position of the gentleman from Nevada [Mr. CASSIDY], in order to secure to the Government that which is already due you must stop competition between these roads so that the subsidized lines will have all the traffic.

Mr. CASSIDY. I had hoped that I had made myself clear on that point, but it seems that the gentleman from California [Mr. GLASCOCK] does not comprehend my position at all. I have said nothing whatever about stopping competition. I have been urging the fact that the overland business is now divided—with one road as regards the Central Pacific and with five roads as affecting the Union Pacific; and that by reason of this division of business the Government's chances of procuring its money under the operation of any bill based upon a percentage of the net earnings had been materially reduced. That is what I said and all that I said in respect to this point in the case. What I want is competition—real competition—the kind that will lessen freight and passenger charges. As I have already pointed out, lower rates are rendered impossible under the percentage plan favored by the majority bill. Every one who votes for that bill must do so with the full knowledge that its whole tendency is in the direction of the maintenance of exorbitant rates. Lower rates and the collection of the debt will both be defeated under the operation of that fallacious measure.

And now, Mr. Speaker, permit to say that I have endeavored patiently and honestly to reach a fair and just conclusion on this subject.

I have gone over the whole matter of the earnings of these roads and their liabilities to the Government and other creditors. It must be confessed that the question is one of many embarrassments and complications on all sides. The great trouble is that this House can never, with the brief time allotted for discussion, be brought to a complete understanding of the many important questions put in issue. On a bill of the magnitude of this, involving as it does more than one hundred millions of money, at least a week should be devoted to its consideration. But this was not to be hoped for at the present session with the crowded condition of our calendars. The Committee on Pacific Railroads gave nearly three months of patient and diligent consideration to this subject. We have divided in opinion nearly equally as to the best mode of procedure in the future. Every member of the committee has been animated by a zealous desire to do that which would best protect the interest of the Government and promote the collection of this debt. We have differed as to policy only, and as a result we come to the House with two bills, both of which are honest bills. That reported by the gentleman from Kentucky [Mr. THOMPSON] representing the majority is a literal copy of the present law with the percentage of net earnings increased from 25 per cent. to 35 per cent.

I take it that it must be apparent to every member on this floor that an increase of 10 per cent. on an admitted failure can not in the very nature of things work any material improvement. For myself, I have deliberately reached the conclusion that this debt must now or in the near future be adjusted on the plan suggested in the Post bill or some kindred plan, or failing in that the Government will stand in imminent danger of losing the entire sum, principal and interest. The Post bill may not be perfect; it may need amendment; perhaps some of its provisions should be discarded altogether; that is immaterial, but I know that the idea is right and that it covers substantially the plan that must ultimately prevail. The chief feature of this bill and the one which should commend it to the favorable attention of all men of ordinary business sagacity is the provision which gives us 5,600 additional miles of railroad as security for the debt.

Mr. THOMPSON. Will the gentleman allow me to interrupt him right at that point?

Mr. CASSIDY. Certainly; with great pleasure.

Mr. THOMPSON. I know the gentleman does not wish any misunderstanding of this matter. Of the 5,600 miles of additional security which the gentleman says will be obtained under the bill which he advocates I understand that there are only 760 miles which actually belong to these corporations, the balance being leased by them.

Mr. CASSIDY. The gentleman is entirely mistaken about that. The Union Pacific system embraces a total of 4,303 miles, of which only 1,436 miles are subsidized. The Central Pacific covers 3,041 miles, of which but 863 miles are subsidized.

Mr. THOMPSON. The gentleman does not meet the question which I ask. He will not tell the House that by an act of Congress we can extend the lien of the Government over 5,000 miles of leased road.

Mr. CASSIDY. Of course I would make no such statement as that, but I do tell the House that with the consent of the companies, as provided in the Post bill, we can extend our lien over everything they own, including whatever interest they may possess in such of the lines as are leased. I have no difficulty in making that declaration to the House in the most unequivocal terms. I have here a table setting out just what roads are owned as well as those that are leased. It may be read for the information of the gentleman. He will find that I am correct in every declaration that I have made.

EXHIBIT No. 1.

Statement showing mileage of roads operated January 1, 1884, by the several companies to which the United States have loaned bonds in aid of construction.

RAILROADS OPERATED BY THE CENTRAL PACIFIC RAILROAD COMPANY.

Name of road.	From—	To—	Miles.	Subsidized or otherwise.	Owned, leased, or controlled.
Union Pacific Railway	Ogden Station, Utah	Utah Southern Railroad Crossing	.11	Bonds and lands	Neither.
Do	Utah Southern Railroad Crossing	Terminus of Union Pacific Railway	5.00	....do	Leased.
Central Pacific Railroad	Terminus of Union Pacific Railway	Sacramento, Cal	757.50	....do	Owned.
Do	....do	....do	.95	Not subsidized	Do.
Sacramento and Placerville Railroad	Sacramento, Cal	Brighton, Cal	5.64	....do	Leased.
Central Pacific Railroad	Brighton, Cal	Niles, Cal	103.83	Bonds and lands	Owned.
Do	Niles, Cal	West Oakland, Cal	24.31	Not subsidized	Do.
Do	West Oakland, Cal	Oakland Wharf, Cal	77.54	....do	Do.
Do	Oakland Wharf, Cal	San Francisco, Cal	2.20	Ferry	Do.
Northern Railway and San Pablo and Tulare Railroad	Tracy (via Martinez), Cal	West Oakland, Cal	3.69	Not subsidized	Leased.
California Pacific Railroad	Sacramento (via Suisun), Cal	Port Costa, Cal	57.52	....do	Do.
Central Pacific Railroad	Roseville Junction, Cal	Redding, Cal	151.60	Lands only	Owned.
Do	Lathrop, Cal	Goshen Junction, Cal	146.08	Not subsidized	Do.
Do	Oakland Wharf, Cal	Brooklyn, Cal	5.67	....do	Do.
Do	West Oakland, Cal	Masticks, Cal	3.82	....do	Do.
Do	Alameda Wharf, Cal	Melrose, Cal	5.19	....do	Do.
Do	East Oakland, Cal	Fernside, Cal	2.01	....do	Do.
Do	Niles, Cal	San José, Cal	17.54	Bonds and lands	Do.
Northern Railway	West Oakland, Cal	Delaware Street, Cal	4.53	Not subsidized	Leased.
California Pacific Railroad	Vallejo Junction, Cal	Vallejo, Cal	2.00	Ferry	Do.
Do	Davisville, Cal	Knight's Landing, Cal	18.57	Not subsidized	Do.
Northern Railway	Woodland Junction, Cal	Tehama, Cal	100.74	....do	Do.
California Pacific Railroad	Vallejo, Cal	Suisun, Cal	20.10	....do	Do.
Do	Napa Junction, Cal	Calistoga, Cal	34.48	....do	Do.
Stockton and Copperopolis Railroad	Stockton, Cal	Milton, Cal	30.00	....do	Do.
Do	Peters, Cal	Oakdale, Cal	19.00	....do	Do.
Amador branch	Galt, Cal	Ione, Cal	27.20	....do	Do.
Berkeley branch	Shellmound, Cal	Berryman's, Cal	3.84	....do	Do.
Southern Pacific Railroad	Huron, Cal	Colorado River, Cal	528.56	Lands only	Do.
Western Development Company	West bank of Colorado River, Cal	Yuma, Ariz	.13	Not subsidized	Do.
Southern Pacific Railroads of Arizona and New Mexico	Yuma, Ariz	West bank of Rio Grande River, New Mexico.	551.39	....do	Do.
Southern Pacific Railroad	Los Angeles, Cal	San Pedro, Cal	24.24	....do	Do.
Los Angeles and Independence Railroad	....do	Santa Monica, Cal	16.83	....do	Do.
Los Angeles and San Diego Railroad	Florence, Cal	San Anna, Cal	27.60	....do	Do.
Pacific Improvement Company	West bank of Rio Grande River, New Mexico.	East bank of Rio Grande River, Texas.	.23	....do	Do.
Galveston, Harrisburg and San Antonia Railway.	East bank of Rio Grande River, Texas.	El Paso, Tex	3.61	....do	Do.
Southern Pacific Railroad	Mojave Junction, Cal	"The Needles"	240.13	Lands only	Do.
Total			3,063.48

WM. H. ARMSTRONG, *Commissioner.*

DEPARTMENT OF THE INTERIOR, OFFICE COMMISSIONER OF RAILROADS, *Washington, D. C., April 9, 1884.*

Mr. THOMPSON. I had all of that information before.

Mr. CASSIDY. I have no doubt of it, but I wanted the House to have it also.

Mr. THOMPSON. Let me repeat my question. Does the gentleman insist that we can extend the Government lien over 5,000 miles of road that these companies have leased?

Mr. CASSIDY. I have already answered that question. The gentleman misstates the facts in the case. He assumes that these 5,000 miles of non-subsidized road are all leased and none of them owned. This is the point about which we differ. Fortunately the official record, as shown by that table, is with me. He will hardly deny that the Union Pacific absolutely owns of non-aided road 235 miles of the Kansas Pacific, 106 miles of the Denver and Cheyenne, 452 miles of the Utah Northern, and 575 miles of the Oregon Short Line, making a total of 1,368 miles. It also owns some other connecting lines of less importance and is largely interested, possessing in most instances a controlling interest, in all of the lines which it leases and operates. The mileage of this company stands about as follows: Entire system, 4,303 miles; subsidized by the Government, 1,436 miles; owned by the company without subsidy, 1,368 miles; leased and owned in part, 1,501 miles. The Central Pacific owns of non-aided road about 2,100 miles, much of which is vastly more valuable than the 863 miles in which the Government is interested; so that when I said that our security would be more than doubled under the Post bill I was strictly within the facts, as I seek to be in all matters affecting the public interest.

Mr. THOMPSON. These companies own but 750 miles of road over which the Government has no lien, and the other 5,000 miles of which the gentleman speaks consist of leased roads operated under a contract with the other companies to pay them all of the net profits made out of operating them.

Mr. CASSIDY. I do not know the source of the gentleman's information. He certainly does not get it from the report of the Railroad Commissioner or from any other official document to which the committee has had access. I have presented here the official record

covering this matter and by that I am willing to stand, merely adding that I shall be perfectly content to risk this entire contest on the correctness of the figures which I have given.

But, Mr. Speaker, suppose it were true that these companies owned no part of the non-subsidized roads; still our position would be greatly improved by the adoption of something like the Post bill, because the earnings of these leased lines would contribute to the ability of the companies to meet their obligations with the Goverement, and for the further reason that we would save to the Government, if nothing more, the cost of transporting the mails and other supplies over 5,600 miles of non-aided road, amounting to hundreds of thousands of dollars annually, constituting an important cash item toward the liquidation of the claim of the United States and which is not now available under the decision of the Supreme Court. It is not necessary, however, to concede that these non-subsidized roads are not the property of the companies, because the record discloses the very reverse of this proposition. In conclusion, therefore, I may assert in perfect confidence that with the statutory lien of the Government, made to apply as under the minority bill to all of the property, aided and non-aided, of these corporations, the security will be found ample and the ultimate extinction of the debt guaranteed beyond any question of reasonable doubt.

DEPARTMENT OF THE INTERIOR, *Washington, June* 25, 1884.

SIR: In compliance with the request contained in your letter of the 14th instant, I have the honor to transmit herewith copy of letter addressed to me on the 17th instant by the Commissioner of Railroads, and the accompanying papers, relating to the financial relations of the Union Pacific Railway Company to the United States.

Very respectfully,

H. M. TELLER, *Secretary.*

Hon. GEORGE W. CASSIDY,
Chairman Committee on Pacific Railroads House of Representatives.

APPENDIX.

DEPARTMENT OF THE INTERIOR,
OFFICE OF COMMISSIONER OF RAILROADS,
Washington, June 17, 1884.

SIR: I have the honor to transmit herewith certain statements relative to the financial condition of the Union Pacific Railway Company as recently ascertained by the book-keepers of this office from the general books of the company at Boston, Mass. Every facility was accorded them by the officers of the road for a full and complete examination of the books and accounts of the company.

Statement No. 1 shows the earnings and expenses of the entire system, including the lines owned, leased, and operated, from January 1 to May 31, 1884.

Statement No. 2 shows the revenue and expenditures of the entire system for the same period.

Statement No. 3 shows the financial condition of the company March 31, 1884, from which it will be seen that the gross floating debt amounts to the sum of $11,400,099.32, made up of the following items:

Bills payable	$5,836,434 22
Accounts payable	1,442,107 91
Pay-rolls and vouchers	2,462,821 77
Dividends unpaid	1,143,742 52
Coupons unpaid	398,992 90
Called bonds	116,000 00
	11,400,099 32

The company has certain available assets which should properly be deducted from this amount, consisting of the following items:

Cash on hand	$840,377 06
Sinking funds in hands of trustees	116,000 00
Bills and accounts receivable	3,038,262 22
Company's stocks and bonds owned by company	2,074,064 05
	6,068,703 33

leaving the sum of $5,331,395.99 as the net floating debt of the company on that date. Were the item of "fuel, material, and stores on hand, $2,622,777.37," deducted, as is often the practice of accountants in estimating net floating debt, this sum would be reduced to $2,708,618.62; but this office does not regard it as an available offset to the floating debt when the road is in active operation, and has therefore excluded it.

A large proportion of this floating debt is a gradual accumulation from expenditures made out of surplus current earnings of the company in the construction of the branch lines, the stocks and bonds of which, in whole or in part, are held by the company to the amount of $37,003,869.51, and are available as a set-off against the floating debt as shown in the above statement, or for any other debts of the company. A large proportion of these stocks and bonds are "quick" assets, and could be readily converted into cash.

Many of these branch lines are wholly the property of the company. The Julesburg branch extends from Denver Junction to La Salle, a distance of 151.16 miles, and was wholly constructed out of the surplus earnings of the company, and is not represented by stock, nor encumbered with obligations of any sort. It is, in fact, an addition of that much fully constructed road to the mileage of the main line.

Statement No. 4 shows the earnings, expenses, bonded debt, and interest of "branch lines" operated by and in the interest of the company, for the year ending December 31, 1883.

Statement No. 5 shows the revenue and expenditures of the road proper, 1,820 miles, for the three months ending March 31, 1884.

Statement No. 6 shows the earnings and expenses, and accrued interest on funded debt, of the "branch lines" operated by and in the interest of the company for the three months ending March 31, 1884, compared with the corresponding period of 1883.

Statement No. 7 is a comparative statement of the earnings and expenses of the entire system, including lines owned, leased, and operated, for the four months ending April 30, 1882, 1883, and 1884. You will observe that the comparison has been made between the years 1884 and 1882, and 1884 and 1883 separately. During the first half of the year 1883, the receipts were unduly increased by payments in settlement of large unadjusted accounts of previous years, while the receipts of the last half of the year were largely reduced by the active competition of the Denver and Rio Grande and the Northern Pacific Companies, both then completed. The year 1882 was the last year before the construction of these lines affected the course of traffic, and it was also the year of the largest receipts in the history of the company.

Statement No. 8 shows investments in detail in the bonds and stocks of other companies; advances to other companies payable in bonds and stocks; and miscellaneous investments, amounting in the aggregate to $44,068,952.86, as shown in statement No. 3.

Statement No. 9 shows company's stock and bonds owned by the company, amounting to $2,074,064.05.

As the chairman of the Senate Judiciary Committee has verbally requested me to furnish him this information, I respectfully suggest that a copy of these documents be forwarded to him.

Very respectfully,

W. H. ARMSTRONG, *Commissioner.*

Hon. H. M. TELLER,
Secretary of the Interior.

UNION PACIFIC RAILWAY COMPANY.

BOSTON, MASS., *May* 31, 1884.

Statement showing the earnings and expenses of the "entire system" from January 31 to May 31, 1884.

	Expenses.	Earnings.
Gross earnings for the three months ending March 31, 1884, as officially reported to and verified by the book-keepers		$5,059,588 70
Operating expenses and taxes, same period	$3,710,936 19	
Gross earnings for April, as per estimates by weeks of the auditor at Omaha		2,116,215 34
Gross earnings for the first, second, and third weeks of May, as per estimates by auditor at Omaha		1,535,221 27
Gross earnings for the fourth week of May, estimated by the Government book-keepers on basis of first three weeks of May		511,740 42
Operating expenses for April and May, estimated by the Government book-keepers, on basis of expenses for first quarter, from telegram from Omaha that the expenses for April, 1884, would be $100,000 less than the same month in 1883, and the opinion of the railroad officials that the May expenses this year would decrease about the same amount. Take two-thirds of this year's first quarter as being the probable expenses of April and May	2,473,957 46	
Total earnings five months to May 31, 1884		9,222,765 73
Total expenses five months to May 31, 1884	6,184,893 65	
Surplus five months to May 31, 1884		3,037,872 08

Compared with 1883 (leaving out the Saint Joseph and Western, which was not operated by the Union Pacific in 1884, for 1883) shows:

	Five months to May 31, 1884.	Five months to May 31, 1883.	Increase or decrease.
Earnings	$9,222,765 73	$10,696,125 50	* $1,473,359 77
Expenses	6,184,893 65	5,674,997 97	† 509,895 68
Net	3,037,872 08	5,021,127 53	* 1,983,255 45

* Decrease. † Increase.

DEPARTMENT OF THE INTERIOR,
OFFICE OF COMMISSIONER OF RAILROADS,
Washington, June 17, 1884.

Official returns from the company, this day received, show that the actual gross earnings of the entire Union Pacific "system" for the month of April, 1884, amounted to $2,128,964.51, being an increase over the estimated amount of $12,749.17.

Statement showing the revenue and expenditures of the Union Pacific Railway Company for the five months ending May 31, 1884.

Gross earnings of the "entire system" as per statement No. 1, which will cover the company's interest in "branch lines"		$9,222,765 73
Operating expenses of the "entire system" as per statement No. 1	$6,184,893 65	
Discount and interest	77,237 59	
Interest on first-mortgage bonds	1,057,000 00	
Interest on other funded debt	875,000 00	
United States requirement, 5 per cent. and 25 per cent.	301,874 76	
Company's sinking-fund requirement	162,000 00	
New construction	32,612 43	
New equipment	146,364 86	
Expenses of land department, Union division	50,000 00	
Dividend on capital stock, 1½ per cent., April 1, 1884	1,065,197 00	
Total		9,952,180 29
Deficit for the five months to May 31, 1884		729,414 56

MEMORANDUM.—July 1, 1884, dividend, if declared, will amount to $1,065,197. The company estimates that the surplus earnings for June will be $900,000. One-fifth of the above expenditures for five months, except operating expenses and dividends, say $2,700,000, will be the probable additional expenditure for June, say $540,000, leaving $360,000 available for dividends.

To declare a 1½ per cent. (July 1) dividend the company would have to borrow, or draw from any former surplus, the sum of, say, $1,400,000.

BOSTON, MASS., *June* 3, 1884.

Statement showing the financial condition of the Union Pacific Railway Company March 31, 1884, *as ascertained from its general books and accounts in Boston.*

LIABILITIES.		
Funded debt		$84,791,332 50

Amendment to Pacific Railroad Acts.

SPEECH

OF

HON. JAMES W. THROCKMORTON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 16, 1884,

On the bill (H. R. 5442) to amend an act entitled "An act to amend an act entitled 'An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes,' approved July 1, 1862," approved July 2, 1864.

Mr. THROCKMORTON said:

Mr. SPEAKER: There is a controversy with the Union Pacific and the California Central Pacific Railroad Companies arising out of the construction of certain sections of the acts of 1862 and 1864, subsidizing these roads and their branches with lands.

The people of the States and Territories through which these roads are operated have demanded through their Representatives that the lands of these companies, long since earned, shall be titled and subjected to the payment of taxes. The Supreme Court has decided that these lands are not subject to taxation until the Government has parted with its title and conveyed the same to the companies or parties at interest. And it is claimed by the companies that the Government can not convey its title until required by them to do so. In other words, it

is asserted by these companies that if they see fit to decline to ask for patents for one year or ten years, fifty or a hundred years, the Government can not force titles on them without violating a legislative contract made with them in the act of 1864. On the other hand, it is believed by the Committee on Pacific Railroads that as these lands have long since been earned by the companies, the Government can tender titles to all the lands that have been surveyed and selected, and compel a payment of the costs for surveying, selecting, and conveying, as required by the terms of the laws referred to.

It is a question of much moment, not only to the Government, but also one of very great interest to the people of the States and Territories where these lands are situated.

To bring this question to an issue as speedily as possible and to adjust and determine the extent of these grants is the purpose of the two bills presented by the majority and minority of the committee, both bills having the same object and differing only in respect to the means of attaining that object. In order, therefore, to a clear understanding of the interests involved, and of the measures proposed, it is necessary to keep in mind the railroads to be affected, the extent and present condition of the grants involved, the amount of money paid by the companies for lands already patented and selected, and the amount due to the Government when the whole shall have been surveyed and selected and titles conveyed; and it is particularly necessary to examine and analyze the laws under which these grants were made and out of which this controversy arises.

The roads to be affected are the Union Pacific and its three dependencies, the Kansas Pacific, the Denver Pacific, and the Central Branch of the Union Pacific; the California Central and Western Pacific, the Burlington and Missouri River Railroad, and the Sioux City road. As the two last-mentioned roads have received about all the lands they are entitled to and paid very nearly all that the Government claims, they will not be further noticed in my argument.

In ascertaining the amount of the several land grants the statement made by the General Land Office is relied on. This statement makes the grants somewhat larger than is stated by the companies and by the report of the Commissioner of Railroads.

The grants to the Union Pacific, Kansas Pacific, Denver Pacific, and the Central Branch of the Union Pacific, after deducting overlapping grants, are estimated at 21,406,000 acres. Out of this total grant there has been selected by the company 3,938,502 acres; of these selected lands patents have issued on 3,270,481 acres, and there has been paid on these selected lands by the companies the sum of $87,777.85, as required by the act of the 2d of July, 1864, leaving $520,134.16 due and to become due for the costs of surveying, &c., when the work by the Government on the entire grant, the remainder being 17,467,498 acres, is completed.

The grants to the California Central Pacific and Western Pacific, after deducting the area of the Great Salt Lake, which falls within the grant, is estimated at 10,824,515 acres. Of this amount 1,311,230 acres have been selected, and patents have issued upon selected lands to the extent of 1,227,109 acres. The statement from the Land Office shows that $65,456.41 have been paid by the company on these selected and patented lands, leaving an estimated balance of $461,041.61 to be paid for the cost of surveying, selecting, and conveying the remainder of the grant, 9,493,309 acres, when the work is completed, making the total grants to the Union Pacific and its dependencies and the California Central and Western Pacific 32,230,515 acres, out of which 5,269,708 acres have been selected, and of the selected lands 4,497,590 acres have been patented. Upon the patented and selected lands the companies have paid into the Treasury $153,233.26, leaving an estimated balance of $981,175.77 to be paid for the costs of surveying, selecting, and conveying the remainder of the grants, which is estimated to be 26,960,507 acres.

It will be observed that more lands have been selected by 772,118 acres than have been patented. This results, as the committee have been informed, from disputes about mineral lands, homestead entries, and prior claims. The Commissioner of the General Land Office informed the subcommittee that his office was practically up with the patenting except in respect to the disputed lands.

The further information to the committee is that about six-sevenths of the grants have been surveyed, and only about one-sixth have been selected and the costs paid for surveying, &c. These lands have been earned for a period of fifteen and eighteen years and titles requested on less than one-sixth, leaving 26,000,000 acres untaxed as a burden upon the States and Territories where they exist. Taking the $153,233.26 paid into the Treasury by the companies on the selected lands and adding it to the $981,195.77 that will be due upon the completion of the work, it will be found that there has been paid but little more than one-seventh of the estimated cost of the entire work.

Mr. Speaker, let us examine the acts of Congress under which the railroad companies acquired these grants of land, and see if their construction of them, that titles can not issue until the companies require patents, is the just and proper one. These grants were made under the act of 1862 and the amendatory act of July 2, 1864. The third section of the first law donated ten sections of land to each mile of constructed road, but it was silent upon the subject of the cost of surveying, selecting, and conveying the lands.

The fourth section of the act says:

And if it shall appear to him—

The President—

that forty consecutive miles of said railroad and telegraph line have been completed and equipped in all respects as required by this act, then, upon certificate of said commissioners to that effect, patents shall issue conveying the right and title to said company.

And the seventh section of the same act says:

And when any portion of said route shall be finally located the Secretary of the Interior shall cause the said lands hereinbefore granted to be surveyed and set off as fast as may be necessary for the purposes herein named.

The act of 1864, sections 6 and 20, modified the previous law, and allowed patents to issue upon completed sections of twenty instead of forty miles of road; and section 20 of that act, referring to one of the roads included in the act, after alluding to the President, says:

And if it shall appear to him that twenty miles of said road have been completed as required by this act, then, upon certificate of said commissioners to that effect, patents shall issue conveying the right and title to said lands to said company, on each side of said road as far as the same is completed, to the amount aforesaid; and such examination, report, and conveyance by patents shall continue from time to time in like manner until said road shall have been completed.

The act of 1864 greatly augmented the benefits conferred upon the companies. It extended the time for the completion of sections of the work as well as for the entire lines of road; it reduced the number of miles one-half upon sections of completed roads upon which lands should be conveyed and bonds issued; granted additional rights of way and doubled the amount of lands donated; increased the width of the reservation and allowed coal and mineral lands to be taken by the companies; repealed that part of section 17 of the first act which required retention by the Government of a portion of the bonds, and allowed bonds to be issued upon uncompleted sections of road; provided for the consolidation of companies and conferred other benefits; but the chief and most desired favor was the relinquishment by the Government of its first-mortgage lien upon the roads, a subordination of its prior lien to that of the companies' first-mortgage bonds.

Among all these enlargements of the interests of the railroad companies and modifications of the act of 1862 for their benefit only part of one section of that act was repealed in terms, and that was the clause of section 17 in regard to the retention of bonds by the Government on sections of the roads and until the entire work was completed. Section 21 of the amendatory act of 1864, out of which the controversy arises, says:

That before any land granted by this act shall be conveyed to any company or party entitled thereto under this act there shall be paid into the Treasury of the United States the costs of surveying, selecting, and conveying the same, by the said company or party at interest, as the titles shall be required by said company.

It is under the construction of this last clause that the companies claim the right to refuse titles and decline paying costs until it suits their convenience to do so.

To expose the absurdity of this pretense it is only necessary to read the remainder of the section, which says:

Which amounts shall, without any further appropriation, stand to the credit of the proper account, to be used by the Commissioner of the General Land Office for the prosecution of the survey of the public lands along the line of said road, and from year to year until the whole shall be completed, as provided under the provisions of this act.

But if there should be any doubt in regard to the construction to be given to this section it is only necessary to refer back to the sixth section of this amendatory law, which modified the first law in so far as it required forty-mile sections of road to be completed before bonds could be issued or lands conveyed. That section says:

And the lands appertaining thereto may be set apart, located, entered, and patented as provided in this act and the act to which this is amendatory.

Now, it will be recollected that the fourth section of the act amended says that "patents shall issue conveying the right and title to said lands to said company." And the seventh section of the original law required the Secretary of the Interior, "when any portion of said route shall be finally located," to "cause said lands hereinbefore granted to be surveyed and set off as fast as may be necessary for the purposes herein named."

Now, sir, one of the "purposes herein named," that this work should be done "as fast as necessary," was to enable the Secretary of the Interior to prosecute the work of surveying, setting apart, and conveying the lands as rapidly as each section of road was completed, and on each section so completed the law declared the patents should issue.

But to still further strengthen the view that the patents were required to be issued as each twenty-mile section of road was completed attention is again called to the twentieth section of the amendatory act of 1864, which says:

And if it shall appear to him that twenty miles of said road have been completed, as required by this act, then, upon certificate of said commissioners to that effect, patents shall issue conveying the right and title to said lands to said company, &c., and such examination, report, and conveyance by patents shall continue from time to time in like manner until said road shall have been completed.

These several sections of the act of 1862 and the amendatory act of 1864, taken and construed together, render it to my mind positively cer-

tain that it was the clear import and intent of these acts, when the Government had surveyed and set apart the lands on the first completed section of road, to make it the duty of the authorities of the Government to tender titles and demand from the railroad companies the cost of the work, and upon failure of the companies to pay the same the work should have ceased; otherwise there would have been no fund "without any further appropriation" to stand to the credit of the proper account "to be used by the Commissioner of the General Land Office for the prosecution of the survey of the public lands along the line of said road, and so from year to year, until the whole shall be completed, as provided under the provisions of this act"—the act of 1864.

It is beyond dispute that under the law the cost of surveying, selecting, and conveying these lands was to be at the expense of the companies.

It is equally as certain that this work was to be prosecuted out of moneys, without further or other appropriation, paid by the companies, so that the work could be prosecuted from year to year until the whole was completed. Therefore it follows that the Government may tender titles and demand the costs of perfecting the same, and in the event of failure on the part of the companies to pay such dues to enforce collection.

The concession of larger grants and greater benefits conferred by the act of 1864 does not justify the conclusion that there was a legislative contract to relieve the companies from paying the dues required by the act for fifteen, thirty, fifty, or a hundred years after the lands were earned and titles tendered.

The last section of the act of 1864 declares that Congress may at any time alter, amend, or repeal the act. As a matter of course such amendment, alteration, or repeal would have to be made with due regard to the rights of the companies.

The bill reported by the majority of the committee looks to an amendment of the twenty-first section of the act of 1864, not to change it as far as it goes, but to add to it and make more certain and positive its meaning, and to require the companies to take titles to their lands when tendered, and pay the cost thereon, in order that the Government, at the expense of the corporations, may complete the work and adjust and speedily determine these grants, receive back the sums of money already expended beyond the requirements of the law, and with the further view to have these lands placed upon the market, so that their settlement and production may not be retarded, and that these vast estates may be added to the taxable values of the country.

Mr. Speaker, these companies, after charging the lands with the most enormous costs of sale, have realized in cash and notes secured, bearing interest, as the net proceeds of sales of about one-sixth of their grants, $20,000,000, and by their own showing the other five-sixths are worth $30,000,000.

Now, sir, shall these lands be longer held for speculative purposes? Are these favored corporations beggars, or shall they, because of their princely inheritance and the millions that ceaselessly flow into their coffers, be exempt longer from paying to the Government that which is its due, and from contributing their just proportion of taxes to the States and Territories where the property is situated?

Restoration of Naval Cadets.

SPEECH

OF

HON. JOHN R. THOMAS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 24, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 1408) limiting a portion of an act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1883, and for other purposes"—

Mr. THOMAS said:

Mr. CHAIRMAN: The views of the minority of the committee in this case, as submitted in their report, were prepared by me with considerable care after a most thorough investigation of the subject; it is signed also by the chairman of the committee, who, in his remarks just submitted, has given some of the facts set forth in that report.

In order that this matter may be understood more fully, and that the members of the House shall not be carried away by maudlin sentiment without a proper understanding of what is before them, I ask that the views of the minority be now read. After that has been done I shall call attention to the provisions of this bill and attempt to show some of its vicious features, for I assure the House that a more vicious measure has not been proposed in Congress during the six sessions it has been my fortune to serve here.

The Clerk read as follows:

The undersigned, members of the Committee on Naval Affairs of the House of Representatives, have found great difficulty in keeping pace with the friends of the general proposition to restore to the naval service the cadet-midshipmen and cadet-engineers, as well as surplus graduates, who were mustered out under the provisions of the act of August 5, 1882.

Quite a number of bills, in various forms, have been introduced in the House and referred to the Committee on Naval Affairs, all of which have had as their object either the restoration of a part or all of the naval cadets who were or are affected by the act of August 5, 1882.

The first bill investigated by the committee was bill H. R. 7, which was thoroughly sweeping in its character and relieved all students who were at the Naval Academy or at sea prior to the passage of the act of August 5, 1882, from the effects of its provisions. That bill, with a slight modification, was finally ordered to be reported favorably by a majority of the committee, whereupon we prepared and were ready to present to the House a full and complete minority report, showing the vicious character of the legislation proposed.

Finding that the measure would probably not succeed in the House, in the face of the reasons given in the minority report, the action of the committee was reconsidered. Another and different bill, even worse and more vicious in its character, was adopted in its place; and, in order to cover up the objectionable character of the legislation, an entirely new proposition was added as an amendment thereto, to wit, reducing the number of appointments to the Naval Academy one-half, and upon the two separate, distinct substantive propositions a majority report has been adopted, in which we have not been able to join, and beg leave to say that the conclusions reached, as well as the reasons upon which they are claimed to be based, are wholly unsound, and do not in any degree, to our minds, justify the legislation proposed.

First. We object to the assumption, both in the bill and report, that the act of August 5, 1882, was retroactive in its effect, as applied to the cadets, either at the Naval Academy or at sea, who had not completed their prescribed course of study and training as required by law, the rules of the Navy Department, and the Naval Academy; and therefore section 1521 of the Revised Statutes, as follows:

"When cadet-midshipmen shall have passed successfully the graduating examination at the academy, they shall receive appointments as midshipmen and shall take rank according to their proficiency as shown by the order of their merit at date of graduation"—

does not apply to the beneficiaries of this proposed bill, as section 1520 of the Revised Statutes provides that "the academic course of naval cadets shall be six years;" and it is not claimed that any of these cadets had completed the prescribed six years' course.

Although it may have been the practice of the President or Secretary of the Navy prior to the act of August 5, 1882, to assign each graduate from the Naval Academy to some official position, either in the line or staff of the Navy, and although cadets entering the Naval Academy may have thought that, in case they passed successfully the prescribed course at the academy, they were provided for by the Government for life, still the Executive, under the Constitution and law, is justified in calling to official positions only such number of officers as are necessary to the complete discharge of the duties of each department.

It matters not what the opinion of the Board of Visitors to the Naval Academy or what the opinion of members of Congress who nominate naval cadets for appointment to the academy may be, the fact remains that the President is not warranted in appointing to any branch of the public service officers who are not needed; and that the services of the young men to be benefited by this bill are not needed is shown by the fact that the President approved the act of August 5, 1882.

The act of June 8, 1876, passed for the supposed relief of graduates of the Military Academy, was an entirely harmless and unobjectionable measure, as there were not then, nor have there ever been since, more graduates from the Military Academy than were necessary to fill existing vacancies in the Army. In fact, a large number of officers are annually appointed to the Army from civil life to fill vacancies remaining after all graduates have been provided for.

The statement in the majority report that cadet-engineers are retained while cadet-midshipmen were discharged is not in accordance with the facts. A part of the cadet-midshipmen and a part of the cadet-engineers were retained. Of the classes of 1881 and 1882 the twenty-three standing highest on the list for efficiency were retained; the sixty-three standing below twenty-three on the list were honorably discharged with one year's full pay, in compliance with the provisions of the act of August 5, 1882.

An examination of the Naval Register shows that, at the date of the passage of the law complained of, there were 1,817 naval officers on the active-list. Their annual pay amounted to, and they were receiving, $3,825,400, while the Government only had thirty-one naval vessels in commission, being fifty-nine officers for each ship, or one officer to every five men. This number was annually augmented by the addition of about forty young officers from the surplus graduates from the Naval Academy.

Recognizing then, as all must now, that the Navy was officially top-heavy, that the Government already had under commission, at a vast expense, many more officers than could find or be provided with legitimate duty in the line of their profession, Congress passed the act of August 5, 1882. The effect of that act was to cut down the officers of the staff of the Navy one hundred and forty and of the line one hundred and fifteen, thus leaving 1,562 officers, or enough for seventy ships, according to the Secretary's estimate. By this reduction there was an annual saving to the Government of $201,375.

The act of August 5, 1882, was the beginning of a wise reform. We believe that such a policy ought to be adhered to instead of recklessly and extravagantly adding sixty-two more officers to an already overgrown and plethoric naval list, when the Government has no use or duty for them to perform.

While we may sympathize with the young men who have failed to secure a place on the official pay-roll of the Navy, we can not allow that sympathy to lead us into supporting such a monstrous, prodigal, and unjustifiable measure as is proposed.

The claim made by the friends of this measure, as well as by the beneficiaries thereunder, that the education they have received at the Naval Academy unfits them for the civil pursuits of life, is unworthy of the young men who make it, or of serious consideration by any one.

After the Government has supported these young men for six years, and has given them a full educational course at one of the best academies in the world, and has added thereto a whole year's pay, then for them to complain that they are not able to compete in the struggle of life with the young men of the country who have been compelled to rely upon their own resources and obtain their education as best they could, is puerile, unmanly, and untrue.

Impressed by the truth and justice of our position, and that we have no right or lawful authority to recklessly squander the people's money in providing comfortable and lucrative official life positions for those whose services are not needed, we protest against the passage of that part of the bill.

This bill is particularly vicious, as it proposes to do an act of great injustice, if the idea upon which all this proposed legislation is based is correct, as it discriminates in favor of one only of the classes of 1881 and 1882, who were performing the last two years of their educational course at sea, to wit, the classes of 1881 and 1882.

As will be seen, this bill provides as follows:

"And those members of the class of 1881 who have been honorably discharged under the provisions of the aforesaid act may return to the service and take their places on the Naval Register in the same manner as if said part of such act had not been passed."

What reasons there are for making an exception in favor of the class of 1881 over that of 1882, or, in fact, of making an exception in favor of either one or both

of these classes as against the other students at the Naval Academy, none of whom had completed their course, is wholly inexplicable to us. If Congress determines to increase the official *personnel* of the Navy by adding all who will probably pass a successful examination out of those at the Naval Academy at the time of the adoption of the act of August 5, 1882, instead of having 1,562 officers, there will be 1,762, as the Secretary estimates that there will be 200 successful graduates out of the whole number then at the Academy and at sea who had not completed their course.

If only the classes of 1881 and 1882 are added, then you will add sixty-two to the list, and that, too, in face of the fact, as we have shown before, that we already have officers enough to fully command and manage seventy ships.

As to that portion of the bill which proposes to reduce the number of appointments to the Naval Academy one-half, we find ourselves equally opposed, for the reason that it costs almost as much to carry on the school for the education of half the number that it would for the full number now authorized by law.

At the beginning of the late war the Government, finding it necessary to put in commission a large number of ships, was compelled to draw from civil life some 1,600 officers who had had no military or naval experience. True, they had been seamen and were acquainted with the sea and the sailing of ships, but had had no experience in the military duty of a naval officer. Therefore, it became necessary to educate them after they were put into the service as officers.

The French and German Governments each, after the Franco-Prussian war, finding that they had not a sufficiently educated sea reserve upon which to draw, adopted the policy of educating a large number of young men, and at the end of their course discharging them, so that in case of emergency they might be drawn upon in increasing the official *personnel* of the navy. While all the graduates of our Naval Academy are not needed to officer our ships of war in time of peace, it appears to us that we might learn lessons of wisdom from the example of other governments and educate these young men to the full capacity of the school, and, at the end of their course, relegate them to civil life, thereby establishing a valuable reserve sea force to be drawn upon in case of war.

The plan of reducing the number of appointments to the Naval Academy was adopted for the manifest purpose of reducing the cost of reinstating the naval cadets who were mustered out under the act of August 5, 1882. The attempt is to offset the cost of those to be educated against the cost of those whom it is proposed by this bill to put back into the service.

We protest against this, and believe it not only to be an unfair presentation of the case, but an unwise policy to be adopted by Congress.

Therefore, we earnestly protest against the passage of the whole bill, and beg leave to submit the following letter of the Secretary of the Navy, showing the effect of restoring all of those who were mustered out under the act of August 5, 1882, to the Navy; and, as the proposition to restore 200 more officers to the Navy is vicious, so is this proposition to restore 62 only less vicious in degree.

Respectfully submitted,

JOHN R. THOMAS.
S. S. COX.

Mr. THOMAS. I now ask leave to have printed in the RECORD the letter of the Secretary of the Navy accompanying the minority report and made a part of it, as it is too long to be read at this time, and for the further reason that most of the members of the House have probably already seen that letter.

There was no objection, and leave was granted accordingly.

The letter of the Secretary of the Navy is as follows:

NAVY DEPARTMENT, *Washington, D. C., January 28, 1884.*

SIR: In response to your request, I have to state that the passage of House bill No. 7, introduced by Mr. OATES, for taking into the Navy all naval cadets who were undergraduates of the Naval Academy August 5, 1882, would cost the Government over $8,632,450.

The classes to which the law would apply are as follows:

Class of 1883	86
Class of 1884	49
Class of 1885	46
Class of 1886	48
Class of 1887	45
Cadets of 1888 who entered before August 5, 1882	13
Making a total of	287

Of the class of 1883 23 have been appointed to fill vacancies in the Navy. The appointees from the other classes will be fewer. A fair estimate is 15 a year, or 60 in all. Adding these and 4 from the 13 of 1888 and the 23, makes 87 to be admitted under existing laws, and leaves 200 as the supernumeraries to be by this bill put into the service and maintained for life by the Government.

The annual sea-pay of 200 ensigns of the junior grade is $200,000. The career of an officer from graduation to retirement, or between the ages of 22 and 62, is forty years. As the 200 officers pass through successive grades their number will decrease and their rates of pay will increase. Estimate the decrease at 2 per cent. of the original number annually for eighteen years, 2½ per cent. for the next nine years, and 3½ per cent. for the final thirteen years; ascertain the number of years passed in each grade by assuming a normal rate of promotion; take only shore-pay above the grade of junior ensigns, and the result will be as follows:

Grade.	Number of officers reaching each successive grade.	Average number of years in the grade.	Shore-pay of each grade per annum.	Aggregate amounts received by each grade.
Junior ensigns	200	5	$1,000	$1,000,000
Ensigns	180	4	1,000	720,000
Junior lieutenants	164	4	1,500	984,000
Lieutenants	148	5	2,000	1,480,000
Lieutenants	128	9	2,200	2,534,400
Lieutenant commanders	83	4	2,400	796,800
Commanders	57	5	3,000	855,000
Captains	25	2½	3,500	218,750
Commodores	9	1	4,000	36,000
Rear-admirals	3	½	5,000	7,500
Total amount to be paid the 200 officers before their withdrawal, retirement, or death (or an average of $215,811.25 per annum)				8,632,450

The above is a low estimate, taking, as it does, only shore-pay above the first grade, allowing a rapid decrease in number, and adding nothing for pay upon the retired-list. The total cost to the Government for pay of 200 officers proposed to be legislated into the Navy, where they are not needed, would undoubtedly be $10,000,000.

There is no fair justification for imposing this heavy burden upon the people of this country. At the time of the act of August 5, 1882, the number of naval officers was being increased about forty annually by surplus graduates from the Naval Academy. At the same time Congress saw already in the service 1,817 naval officers on the active-list, receiving annually $3,825,400, being 59 officers to each of the 31 ships in commission, or one officer to every five seamen. Reform was inevitable, and was commenced. It was by that act enacted that no more officers should be taken into the service from the academy except to fill vacancies in the lower grades of the line and staff, and in addition, that by the process of leaving unfilled half the vacancies in the upper grades, there should be a gradual reduction of 140 staff and 115 line officers, which would make the active-list consist of 1,562 officers, or enough for 70 ships.

As earnestly and as forcibly as I can, with due respect to Congress, I protest against the sudden reversal and overthrow of this wise reform movement, and the reckless and extravagant interjection into an overgrown naval list of two hundred unnecessary officers. The annual appropriation for pay of the Navy has been reduced from $7,133,980 to $6,932,605, or $201,375. It is now proposed to throw this saving away at one stroke. Certainly this will be economy and reform backward.

In the annual report of the Department of December 1, 1883, it is urged that the reduction to the 1,562 officers allowed by the act of August 5 ought to be made at once, and that this can wisely be done by placing upon a supernumerary list those who for various reasons are not fitted for nor likely to be ordered to the command of vessels or any other important duty, and are therefore an incubus upon the naval establishment. No movement in this or in any mode to clear away the dead wood of the Navy *personnel* has been made by those who propose, without doing this, to precipitate two hundred new officers into the service. To thus increase before purging the naval list will be worse than a blunder.

An examination of the memorial of the naval cadets who ask Congress to place them for life upon the pay-rolls of the Government, without even the suggestion that the country will need their services, fails to show any adequate ground for granting their request.

They assert an obligation on the part of the Government to make them naval officers because all prior graduates have been so appointed. But if the country needed those, and does not need them, surely no obligation exists, notwithstanding their expectations. Because they have received free of all expense the best possible course of education the further duty is not imposed upon the donor to continue to employ them and to support them for life, if their services are not needed.

They say their education will be almost useless in business or in civil professions. They are mistaken. Not one in ten of them could have obtained elsewhere, even at large expense, an education so liberal, practical, useful, or so well fitting them for any civil pursuit. They will have received a superior education at the Government expense, and with a donation of one year's pay in advance will return to civil life admirably fitted to enter and to succeed in the most lucrative employments of peace.

They say that to select those who may be needed to fill vacancies from the highest scholars according to their merits only is unjust to the lower and poorer scholars. This argument suggests the idea upon which some of them have been proceeding, that if they can barely escape dismissal for deficiencies in their studies they can still receive life commissions in the Government service. Are the people really under contract thus to burden themselves?

They say that several members of the Forty-seventh Congress have told them they did not understand the act of August 5 when they voted for it; and that the similar act in reference to West Point graduates only applied to cadets entering the academy subsequently. The act of August 5 is unmistakable in its terms. The Army has required, to fill vacancies, all the West Point graduates, and no question of taking into the service officers not needed has arisen.

They say that the recent board of visitors to the academy—"prominent public men"—recommended that they be taken into the naval service. This is true. Since it became apparent that the act of August 5 would send some two hundred surplus graduates out into the world, although with the best possible education, to earn their own living like millions of other American youths, the parents and friends of the three hundred cadets within the possible range of the act have besieged "prominent public men" with unrelenting persistency to save their boys from dislodgment. From every Congressional district comes a pressure which it is difficult to resist when only the money of the Government is to be sacrificed.

But I sincerely hope that the contemplation of our actual naval establishment—1,700 naval officers with not one modern ship or gun for them to command—will arouse the firmness necessary to resist the extravagant proposition to add two hundred more to these excessive numbers; to increase at once the annual Navy appropriation $200,000, and to take eventually ten millions from the public Treasury, only because two hundred young men and their relatives and friends doubt their ability, having received the best education the country can furnish, to succeed in civil life in competition with the less favored mass of American boys.

Very respectfully,

WM. E. CHANDLER,
Secretary of the Navy.

Hon. JOHN R. THOMAS,
Member Committee on Naval Affairs, House of Representatives.

Mr. THOMAS. Mr. Chairman, the act of August 5, 1882 was directed against a top-heavy navy. At that time there were 1,817 officers in the Navy; we had thirty-one ships to be officered. That would give fifty-nine officers to each ship, or one officer for every five men in the Navy.

Mr. OATES. Mr. Chairman——

Mr. THOMAS. In a moment. Congress concluded that it was about time to check the tide of officers which was being foisted annually upon the Government. Now I will yield to the gentleman for a question.

Mr. OATES. I do not rise to ask a question, but to object to printing in the RECORD the letter of the Secretary of the Navy unless it is accompanied by a letter in reply to it from the cadets affected by this bill.

Mr. THOMAS. The gentleman is too late.

The CHAIRMAN. The objection is too late; the printing of the letter has already been ordered.

Mr. THOMAS. Believing that the action of Congress was wise in providing for a reduction of the officers taken annually upon the Naval Register, I have from the beginning opposed each and every of the bills having that object which have been introduced into this House, and I think there have been some twelve or fifteen of them. It was proposed by the act of 1882 to reduce the official *personnel* of the Navy

from 1,817 to 1,562. There was a cut made of the number of officers of the line and of each of the different branches of the staff, the Pay, the Engineer, and the Marine Corps.

The bill now under consideration proposes to put thirty-three officers on the naval register in addition to those we now have, although it is made to appear that it will put sixty-two additional officers on the register. This is one of the most anomalous bills I have ever seen in my life. In the first instance, it proposes "that that part of the act approved August 5, 1882, limiting the number of graduates of the Naval Academy to be retained in the service in each year shall not apply to those classes who had completed the four-year course at the Naval Academy prior to the passage of said act."

It would appear that this bill was intended to relieve the cadets who had completed their course at the Naval Academy. I desire to say that not one of the thirty-three affected by this bill, or the sixty-two intended to be affected by it, had completed the course prescribed by law. The claim that the bill is retroactive is simply absurd when you look at the law requiring that the course shall be six years instead of four years, as is assumed in this report; and it is not contended that one of these young men had completed the six-year course or had become an officer in the Navy by reason of having spent four years at the Naval Academy.

More than that, it can not be shown that there was ever any contract on the part of the Government to retain these young men in the service. No contract, no semblance of a contract, on the part of the Government can be found. The education which these young men receive is simply a gratuity on the part of the Government, with the understanding that the Government shall employ their services if they are needed.

It is said here that a hardship has been imposed upon these young men; that they have devoted six years of their lives to this service. It is true that they have devoted six years of their lives to the acquisition of a most magnificent education free of all cost to them; and in addition to this they have had a whole year's pay given to them upon being mustered out. I remember that in the last Congress a bill was passed reducing the number of collectors of internal revenue. Did anybody raise his voice against that reduction on the ground of injustice to those officers? But it is said "they were not life officers." Neither are naval officers life officers. No officer of the Navy, from Admiral down to junior ensign, holds a commission that purports even on its face to make him an officer of the Government for life. The commission expressly declares that the position is held "during the pleasure of the President of the United States." So it was with the commissions of those internal-revenue officers; their commissions were "during the pleasure of the President." And they had not had the advantage of being educated by the Government as these young men have. In respect to their tenure of office, these two classes of officers stand upon exactly the same footing.

My colleague on the committee, the gentleman from Maryland [Mr. TALBOTT], urges as a reason for the restoration of these young men that they have been educated for the service and have expected to remain in it. Can we help what their expectation may have been? Shall we load the Government down with a number of useless officers—sixty-two in addition to the great excess we already have—when there is no earthly need for them, nothing that we can put them to doing? We have had to resort to every possible device in order to find employment for the naval officers now on the register. They have been detailed for duty here at the Smithsonian Institution; they have been detailed as inspectors of light-houses on the Western rivers; they have been detailed to every possible place where we could find a hole to throw one of them into in order that we might have some excuse or pretense for their employment.

I wish to say in passing that there never was a brighter or more accomplished set of men in the service of any government than the present official *personnel* of the United States Navy. If these officers have no duty to perform it is not their fault. It is because Congress has for years pursued a miserable, parsimonious, and short-sighted course of conduct in not building up a proper navy in which these officers could perform duty.

I am finding no fault with these men because they have no duty to perform. I only say that the Government of the United States has no earthly use for these sixty-two young officers who have been educated at its expense for six years and have received in addition a whole year's pay. They have gone out with this splendid education to compete with young men who have had to provide the means for their own education.

Mr. NICHOLLS. Will the gentleman yield for a question?

Mr. THOMAS. I will.

Mr. NICHOLLS. The gentleman speaks of the "parsimonious" policy of the Government in respect to appropriations for the Navy. Is it not true that since the Republican party came into power about $385,000,000 have been appropriated for the Navy and there is now no showing for it?

Mr. THOMAS. I think it is true that since the Republican party has had control of the Government there has been just about that much money spent in disposing of the Navy that was made necessary by a part of the Representatives in this Congress and a portion of this country trying to destroy the Government.

Mr. NICHOLLS. What was destroyed by those people?

Mr. THOMAS. Fortunately the Government was able to defend itself——

Mr. NICHOLLS. How much did the people referred to by the gentleman do towards destroying the Navy?

Mr. THOMAS. The gentleman understands as well as I do that the war involved the Government in the purchase of a number of vessels; that most of them were wooden vessels; that they were purchased in an emergency——

Mr. NICHOLLS. I spoke of money appropriated since the war.

Mr. THOMAS. Now, the expenditures the gentleman speaks of arose out of the preservation and disposition of those wooden vessels which were made necessary by the rebellion.

Mr. NICHOLLS rose.

Mr. THOMAS. I decline to be further interrupted.

It is urged as a reason why this bill should pass——

Mr. RAY, of New York. Let me ask the gentleman a question. It is not designed to interrupt or embarrass the gentleman from Illinois, but for the sake of information.

Mr. THOMAS. Ask your question.

Mr. RAY, of New York. As I understand it he takes the position the Government is under no sort of obligation to these young men who have been dismissed. They were dismissed under the law of Congress discharging them after their graduation. I should like to have the gentleman say whether or not in his judgment the Government did not by implication take them into its service and give them employment in the Navy when it took them in as cadets and gave them naval education?

Mr. THOMAS. There is nothing upon which such an opinion can be based. It only agreed to employ them in case it needed their service. The Government made no contract with them; and, as I have said, I care not what the custom may have been to provide for them, I care not what the report of the Board of Visitors may have been, or what the expectation of the naval cadets may have been, the fact remains we are only justified in employing a sufficient number to discharge the legitimate duty of that Department. We have 1,562, and this bill proposes to put on sixty-two more at the cost of $3,720,000. That is the exact proportion as estimated by the Secretary of the Navy.

Mr. GEORGE D. WISE. Will the gentleman from Illinois tell how he got those figures?

Mr. THOMAS. With pleasure. The first bill was the one introduced by the gentleman from Alabama [Mr. OATES]. I wish to say it was the fairest bill introduced here if any of this legislation is to become law at all. If we are to change our policy that bill ought to have been passed, for it provided that the act of the 5th of August, 1882, should not apply to any of the naval cadets or those who had not completed their course.

Mr. GEORGE D. WISE. Yes; that is right.

Mr. THOMAS. That depends on whether you care more to provide life positions for a lot of officers whose services are not needed than to protect the rights and interests of the Government.

I will yield to the gentleman from West Virginia for a question.

Mr. GOFF. I desire to ask the gentleman from Illinois a question in connection with the one propounded by the gentleman from New York [Mr. RAY], and to call attention to section 1521 of the Revised Statutes. The gentleman from New York propounded a question——

Mr. THOMAS. Make it short.

Mr. GOFF. I will make it short. You say there is no law by which it can be implied the Government of the United States contracted or promised these young men they should be kept in the Government service. Let me read section 1521 of the Revised Statutes of the United States.

SEC. 1521. When cadet-midshipmen shall have passed successfully the graduating examination at the academy, they shall receive appointments as midshipmen and shall take rank according to their proficiency as shown by the order of their merit at date of graduation.

Mr. THOMAS. In reply to the question of the gentleman from Virginia [Mr. GEORGE D. WISE], I wish to say there was not one of these sixty-two beneficiaries under this bill who had concluded his course; not one of them, sir. There were two classes, the class of 1881 and the class of 1882. The course had been four years, but a subsequent statute had provided that the course should be six years. It is not pretended they had completed that six years' course. Their appointment depended upon their passing successfully and satisfactorily through that six years' course.

Mr. BUDD. Will the gentleman let me ask him a question?

Mr. THOMAS. Certainly.

Mr. BUDD. Did they not enter the academy under the existing law just read by the gentleman from West Virginia?

Mr. THOMAS. Yes.

Mr. BUDD. Is not that a contract under the law?

Mr. THOMAS. On the contrary it was simply a provision by the legislative branch of the Government to enable the executive department to provide for these men in case they complied with the statute.

Mr. BUDD. Were they not compelled to sign a contract that they would serve? It was a contract on their part; and, if so, how could there be a contract without two parties to it?

Mr. THOMAS. It was not a contract on their part, for each and every one of these cadets were minors and not capable of contracting.

Mr. BUDD. That will not do.

Mr. MILLS. Does the gentleman state that as a legal proposition?

Mr. BUDD. Do you not require them to sign articles of agreement?

Mr. THOMAS. The gentleman propounded a legal proposition to me, and I answer it by saying——

Several members addressed the Chair.

Mr. DUNHAM. May I ask the gentleman a question?

Mr. THOMAS. I would like to answer one at a time.

The CHAIRMAN. The gentleman from Illinois is entitled to the floor, and business will be suspended until order is restored.

Mr. THOMAS. I decline to answer any questions until order is restored.

The CHAIRMAN. The Chair is endeavoring to preserve order upon the floor.

Mr. THOMAS. I will repeat: the legal proposition propounded to me was whether these cadets had not been compelled to sign a contract. In reply I answered, and I reiterate the assertion, that they were not capable of making a contract in that sense of the word, and hence there has been no contract on their part with the Government any more than there is a contract on the part of the Government to keep them under pay for life.

Mr. OATES. Will the gentleman permit me to ask him a question?

Mr. THOMAS. Certainly.

Mr. OATES. Does not the gentleman know that if a contract is made with a minor it does not lie with him in law to plead his minority if he has a right to make it?

Mr. THOMAS. I understand that, but that is not the question here.

Mr. OATES. You compelled them to sign a contract as a condition precedent to their admission. Now you plead their minority.

Mr. THOMAS. This is not a question of pleading but a question of fact, and I answered the gentleman on the question of fact, and I shall now go on, I hope, without interruption to a discussion of this bill.

Mr. DUNHAM. Will the gentleman permit me to ask him a question?

Mr. THOMAS. I prefer not to be interrupted.

Mr. DUNHAM. I would like to ask a question in this connection.

Mr. THOMAS. Mr. Chairman, whatever the intention of the committee having this in charge was, this bill——

Mr. WHITE, of Kentucky. I rise to a question of order.

The CHAIRMAN. The gentleman will state it.

Mr. WHITE. I make the point of order that the gentleman from Illinois is entitled to the floor, and that order should be preserved while he is addressing the committee

The CHAIRMAN. The gentleman from Illinois is entitled to the floor and declines to be interrupted.

Mr. THOMAS. This bill proposes in the outset to relieve both classes, the class of 1881 and the class of 1882. It provides—

> That that part of the act approved August 5, 1882, limiting the number of graduates of the Naval Academy to be retained in the service in each year shall not apply to those classes who had completed the four years' course at the Naval Academy prior to the passage of said act; and those members of the class of 1881 who have been honorably discharged under the provisions of the aforesaid act may return to the service and take their places on the Naval Register in the same manner as if said part of such act had not been passed.

Now, if it is right to pass this bill for the benefit of the class of 1881, I want to ask gentlemen, in all candor and honesty, if we should not pass the bill for the class of 1882? Why is this distinction made? Why this discrimination in favor of one class as against the other; and why has this discrimination been made in favor of men who are completing their last two years' course as against those who have not gone so far; for instance, who have three years to complete their course?

Mr. WHITE, of Kentucky. Will the gentleman allow me now a question?

Mr. THOMAS. I have submitted to a great many interruptions, and would much prefer to be allowed to go on uninterruptedly and without any further questions. However, I will yield for the question of the gentleman from Kentucky.

Mr. WHITE, of Kentucky. I desire to ask the gentleman this question: if the class of 1881 is to be restored, whether that principle does not involve also this, that not only the class of 1882 must follow, but under the section of the law which was read here by the gentleman from West Virginia does it not also involve this dilemma, that we must also make provision for the class of 1883 and 1884?

Mr. THOMAS. Certainly we must make provisions for the classes of 1881, '82, '83, '84, and '85. These were the classes at the academy and at sea at the time of the enactment of the law. I do not desire to be further interrupted. I was inquired of a few moments ago as to how much cost this would be to the Government. The Secretary of the Navy made an estimate upon the bill introduced by the gentleman from Alabama [Mr. OATES], and upon his showing it would cost about $12,000,000 ultimately to pass that bill, or that the final cost, if the bill should be enacted into a law, would reach that sum. That estimate was based upon two hundred successful graduates from the academy. This bill proposes to admit sixty-two, and hence I arrived at the conclusion which I stated, for as sixty-two is to two hundred so will be the cost of sixty-two to the cost of two hundred, which, as I have stated, is estimated to be $12,000,000. If then the cost of the two hundred be $12,000,000, sixty-two will cost as much less than twelve millions as sixty-two is less than two hundred, which would make a total of about $3,722,000.

Mr. MCADOO. May I ask the gentleman a question?

Mr. THOMAS. I would prefer not to yield for a question.

Mr. MCADOO. A very short and pertinent question.

Mr. THOMAS. I have declined to be interrupted, but will yield to the gentleman only for a question.

Mr. MCADOO. Now in saying that the number to be admitted by this is sixty-six——

Mr. THOMAS. Sixty-two.

Mr. MCADOO. Well, sixty-two. Does the gentleman include the cadet-engineers?

Mr. THOMAS. I do.

Mr. MCADOO. Does not the gentleman know that the Court of Claims has decided that the cadet-engineers were never dismissed from the service and are to-day upon the rolls?

Mr. THOMAS. I know this: that the Court of Claims had no jurisdiction whatever of that subject, and they had no authority to decide the case; and also that the executive branch of the Government has declined to be governed by their decision; and I know that they have been attempting to take the case to the Supreme Court of the United States, the only court that has a right to control the action of the Departments, for a final decision.

Mr. MCADOO. Does not the gentleman know that it has gone to the Supreme Court and has not been overruled?

Mr. THOMAS. I decline to be further interrupted.

Now, sir, seeing that this bill was going to meet with a violent opposition, or that it ought to meet with a violent opposition, on account of the immense amount of money involved in it, it was attempted to be offset by cutting down half the appointments of the Naval Academy; and so the amendment comes in here proposed by the committee to reduce the number of appointments to the Naval Academy one-half. And the question is asked, why should not that be done? Why should we educate more officers than we need? Why, sir, it is for the purpose of establishing a reserve force on which to draw in case of war. And there is the further reason that it costs very little more to run the school full than to run it half full. It requires all the machinery and expense to keep up the school for one-half as for the full number, the only difference being the $600 per annum each for the extra number of cadets. And the advantages to be derived from educating these young men and sending them out into the country, sending them out as citizens with this splendid education, to be called upon to meet an exigency in case of war, will more than justify the expenditure of money to keep that school full. And I apprehend this Congress will be slow to reduce the number; I apprehend that members will be slow to cut their districts off from appointments to this school, this Government school, which is in itself only one means of aiding in the education of the young people of this country. It is one means adopted by the Government—founded on the necessities of war, it is true, but still the school was established as one of the means of helping to educate our people, and I think our people would be slow to weaken or abandon that system.

Mr. BALLENTINE. Does the gentleman mean to say to the House that this statement of Secretary Chandler as to the question of expense is a correct one?

Mr. THOMAS. I mean to say that it is a statement based upon the best obtainable facts, and is as nearly correct as any speculative statement can be.

Mr. BALLENTINE. I have here a statement which goes to show it is merely speculative on the part of the Secretary.

Mr. THOMAS. Any estimate based on the possibilities of human life is necessarily speculative. But taking the history of the past, taking the cost of the officers of the Navy of the different grades, it will be seen that the Secretary's estimate is not an excessive one, and that this bill will cost, as I have said, three and a half million dollars.

Members of Congress will stand here and higgle about putting one man on the retired-list, a man who has served twelve years as chaplain of the Navy, and on the same day they will stand here and propose to involve the Government in an expenditure of three and a half million dollars without any sort of justification or any sort of service to be performed in return therefor.

Mr. BUDD. I wish to ask the gentleman for how long a period those three and one-half millions run.

Mr. THOMAS. During the time these cadets are supposed to be in the service.

Mr. BUDD. Twenty years or more. Are you a prophet to know there is not to be some disturbance that will require their services?

Mr. THOMAS. We can only base our estimate upon the present condition of affairs.

Mr. BUDD. Then you should base your estimate on the amount to be expended annually.

Mr. TALBOTT. I will ask the gentleman from Illinois [Mr. THOMAS] is it not a fact that, whether these young men are put back

into the Navy or not, you have to keep a certain number of officers on the active-list, and until vacancies occur above them they will remain as ensigns on ensigns' pay?

Mr. THOMAS. That is the gentleman's opinion.

Mr. TALBOTT. One moment. Does not the Secretary of the Navy admit that is true unless Congress should go to work and increase the number of officers?

Mr. THOMAS. If the gentleman will look at the Secretary's letter he will see what he admits. But he need not get excited about it. There is the Secretary's letter, which speaks for itself. And no man yet has come on the floor and met that statement with any accurate or substantial answer or anything like an answer.

Mr. BALLENTINE. Yes, sir; we have met it, and are ready to meet it now.

Mr. THOMAS. Sympathy is a good thing and ought to control people's actions when they are opening their own purses and dispensing their own charity. But we come here as trustees of an express trust, having only authority to do lawful and proper things, and if we vote away the people's money in this way, without any good reason and without any sort of compensation for the expenditure, it is unjustifiable; it is highhanded; it is unwarrantable and indefensible. [Cries of "Vote!" "Vote!"] I guess we will not have a vote until my time expires. I yield ten minutes of my time to the gentleman from Colorado [Mr. BELFORD]. He will give you a little music on which to whet your teeth. [Laughter.]

Diplomacy and Decorations.

SPEECH

OF

HON. WILLIAM E. ROBINSON,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 14, 1884,

On the bill (H. R. 6770) making appropriations for the consular and diplomatic service of the Government for the fiscal year ending June 30, 1885, and for other purposes.

Our diplomacy a humbug—Founders of our institutions—Republican virtue—Mr. Buchanan—Our minister to Persia—Ridiculously ornamental—Half-concealed charms—British lords and French counts—Snobs and spotted peaches—James Russell Lowell—Twister of lion's tail—Heard only through his stomach—The Declaration of Independence—Lingered in English prisons—Outrages on our citizens—The Brooklyn Times—Brooklyn city—New Jersey and New York—New York Commercial—New York Truth—Brooklyn Land League—New York Daily News—New York Sun—The Truth again—The Sun again—Commercial again—Sun once more—New York Common Council—New York Herald speaks—Truth once more—Opinion of Attorney-General—Yeas and nays—What is an American citizen?—Lowell's impeachment—The Herald once more—New York World—English organs—The Evening Post—Change in Washington sentiment—Fools in Washington—Ditto in New York—Anglomania—Diplomatic follies—An unhappy American girl—Mr. Lowell *en costume*—No Fourth of July—My Lord Rector—What is English society?—Impudent threats—Old times—Decorated expectants—Congressional condemnation—Rush on decorations—Our Anglified flunkies—Ensign Reynolds—What is a knight?—Honor the brave—The Constitution threatened—Honors that degrade—Brave firemen—What is a dude?—Not dealing with the Irish—A fair swap—Who shall be President?—A hand-book wanted—A chance to get even—No royal presents—Timeo Danaos; no affair of Irish feeling—My course—Addenda—New York Herald once more—Tribune and Times—Ensign Reynolds's bill—Queen Elizabeth—Words in my defense—Public meetings indorse me—Sustaining letters—Judges Black and Holman—Non-intercourse with diplomats—Diplomatic spies—Congress on Ireland—Wendell Phillips and Horace Greeley—Things I do not like—Room for American ideas.

Mr. ROBINSON, of New York, said:

Mr. CHAIRMAN: Our diplomatic service is a humbug and a disgrace to our republican country. Our ambassadors abroad are of no use. Our ministers plenipotentiary, so far as any benefit to the country is concerned, are not worth a shilling a dozen. The pay of our ministers is a wasteful expenditure of millions which might better be devoted to some useful or patriotic purpose, and the entire system is a school for the most ridiculous snobbery and ought to be abolished. There is no use in trying to improve it or to prune from it the extravagance and cost and folly which naturally belong to it. The only proper amendment to this bill should be to strike out all those parts that pertain to ministers and legations and perfect the provisions pertaining to the consular service. There is a superstition that in order to prevent a dog from going mad we should cut off the extremity of his tail, where the worm is supposed to be which creates the madness. And some one has suggested that the surest way to accomplish that end is to cut off the dog's tail just behind the ears. [Laughter and applause.] The best way to cut down the pay of our ministers is to cut it off altogether and abolish the entire system. This was the opinion of the democratic-republican

FOUNDERS OF OUR INSTITUTIONS.

One of the ablest debates that ever took place in this House occurred in the Fifth Congress, in 1798, and that great statesman, Albert Gallatin, denounced the entire system as I now denounce it. In this he was ably seconded by Mr. Nicholas, of Virginia, who gave it as his opinion that "the United States would be benefited by having no ministers at all," and gave notice that at a later day he would make a motion to do away with all foreign diplomatic intercourse. Mr. Edward Livingston, of New York, expressed the same opinion, and quoted Mr. Pinckney, of South Carolina, who had been abroad as our minister, as having declared that our diplomatic connections had been injurious to this country and that they ought to be got rid of as soon as convenient. Mr. Livingston suggested the very danger in which we now find ourselves of having men appointed who think that a monarchical form of government and hereditary distinctions would give security and stability to government. The consequence would be that the Government would be undermined before the people were aware of the design, and he admonished Congress that this would bring on a convulsion, and he trusted there would be

REPUBLICAN VIRTUE

enough to frustrate and overturn the design. The debate was protracted from January to March, and the leading Republicans contended for a limitation of appropriations and argued that our entire diplomatic system should be abolished, while the Federalists contended for its continuance and more liberal appropriations; and when the final question was taken on the amendment of Mr. Nicholas, of Virginia, to cut down the appropriations, the Federalists were successful by only 4 majority—yeas 48, nays 52. Among the staunch old statesmen voting to cut down the appropriations were both the Claibornes, William Findlay, Albert Gallatin, Carter B. Harrison, Edward Livingston, Matthew Lyon, Nathaniel Macon, Blair McClenachan, Joseph McDowell, John Milledge, John Nicholas, Samuel Smith, Thomas Sumter, Philip Van Cortlandt, and Joseph B. Varnum (three of them natives of Ireland). Mr. John Austin Stevens, in his life of Gallatin (American Statesmen), gives an account of this debate, and says of Gallatin's summing up:

> No such admirable exposition of the true American doctrine of non-interference with European politics had at that time been heard in Congress.

And wisely adds:

> Now that the ocean cable brings governments into direct relation with each other, there is a tendency to restrict the authority of ambassadors for whom there is no longer any use, and the entire system will no doubt soon disappear.

It was from this debate that the memorable difficulty between Matthew Lyon, of Vermont, and Roger Griswold, of Connecticut, occurred.

It is worthy of notice that this lengthy and able debate arose on a motion to reduce the amount proposed by the committee for the support of our diplomatic service, which was only $40,000. What rapid strides we are taking in extravagance and aristocratic ideas may be inferred from the fact that instead of forty thousand this bill proposes nine hundred and seventy-eight thousand dollars.

Ever since the commencement of our diplomatic service we have had great trouble in keeping our ministers from making snobs and fools of themselves. We have passed several laws and our Secretaries of State have issued circulars directing our ministers to behave and dress like American gentlemen. When

MR. BUCHANAN

went over to England as our minister, Queen Victoria would not allow him to appear in her presence with his pantaloons on, and the "breeches question" threatened to result in breaches of the peace if not in actual war. Mr. Buchanan's letters to his niece, Miss Harriet Lane, describing the progress of this great international diplomatic difficulty are quite amusing and relate to about the most difficult diplomatic business ever managed by our ministers to the British court. The affair was finally settled by Mr. Buchanan being allowed to keep on his trousers if he would only wear a sword to distinguish him as a gentleman from the servants in waiting. What a sorry figure he must have cut wearing a sword, the use of which he no more knew than of a whaler's harpoon!

In the Fortieth Congress, of which I was a member, we passed a law directing our ministers at foreign courts to appear on state occasions in the dress of American citizens. That law was introduced in each House by the chairman of the Committee on Foreign Affairs, both distinguished representatives of Massachusetts, Mr. Sumner in the Senate and Mr. Banks in the House. After ample debate it passed both Houses and became a law by the signature of the President. But we can not get these snobs who misrepresent us abroad to obey the law. It is but recently that I read an account of the conduct of

OUR MINISTER TO PERSIA,

Mr. Benjamin, who, on reaching Teheran and paying an official visit to the Shah, took off his shoes and crawled barefooted into the presence of that specimen of royalty. Was this obeying the law or appearing in the dress of an American citizen? The man who pulls off his shoes on approaching a royal court as if it were holy ground is not a fit man to represent America anywhere. It shows American republicanism humbling itself beyond all humilities. At the beginning of this Congress I introduced a resolution calling for information from the Secretary of State concerning this transaction. It went to our Committee on Foreign Affairs, and there it has slept ever since. It appears to that committee of no consequence whether our servants obey the law or not.

The New York Sun of August 8, 1883, has the following editorial paragraph:

When in all past time was ever an American minister received by any monarch with such pomp and pageantry as were prepared by the Shah of Persia at his capital in honor of Mr. S. G. W. Benjamin, according to the accounts sent to the State Department at Washington by Mr. Benjamin himself? The thing must have been stunning, not to say overwhelming. Behold the Oriental spectacle as displayed in another column under the light of Mr. Benjamin's genius! Abolish the whole diplomatic establishment!

Yes, indeed; abolish the whole system as soon as possible!

When Benjamin Franklin appeared as our representative at foreign courts in the same clothes which he wore at home he inspired respect which no amount of tinsel and lace could win for his successors; and in this connection I might say that when the distinguished gentleman from Pennsylvania [Mr. CURTIN] was our minister to Russia he appeared at court in a plain citizen's dress, and by his dignified presence and simple manhood proved himself worthy of his Irish ancestry and American citizenship, and won more respect than any of the courtly fops who surrounded or succeeded him.

RIDICULOUSLY ORNAMENTAL.

Our ministers abroad have ceased to be useful and become wholly ornamental, and as representatives of a republican people ridiculously ornamental. Can any member of this House tell me a single thing done by any of our ministers abroad since our last diplomatic appropriation bill of over a million and a quarter passed this House for the current year? They are either absent from their posts or pandering to the follies of titled foreigners or brainless American travelers. What use are they to the millions of mechanics and artisans and farmers who pay the taxes and perform the duties of American citizenship? I cut from the Washington Post, the Democratic organ published at the capital, of Sunday last, the following description of a party given by our minister to France. It is from its Paris correspondent, Mrs. Lucy H. Hooper:

PARIS, *April* 25.

Minister Morton and his charming wife have given many brilliant entertainments since their arrival in Paris, but none, I think, that has surpassed the reception which took place yesterday, and for which cards were issued ten days ago. The evening proved fine, and the long lines of gas-jets on the front of the hotel of the legation were undisturbed by a single gust of wind. The pavement of the entrance was covered with a crimson carpet, and masses of tropical plants and flowering shrubs transformed the wide *porte cochère* into a veritable garden. The staircase was also adorned with flowers in profusion, the candelabra that lighted it being surrounded with camellias and azaleas in full bloom. A fine orchestra, placed in one of the rooms of the first-floor suite, played operatic selections and favorite airs throughout the evening.

The display of dress and diamonds was especially noticeable, even for Paris, where elegance of toilet so largely prevails at all grand entertainments. Mrs. Morton herself was lovely to behold in a dress of pale blue satin, the corsage made with pannier draperies, and the skirt having a frontage of white crape dotted with small gold beads, while curved ruffles of point lace were placed at the sides of the skirt. She wore a superb parure of diamonds, the necklace being set in a broad arabesque pattern of great artistic beauty. Mme. Bonaparte-Wyse was arrayed in gold-yellow tulle, embroidered with large dots in silk of the same hue, made of gold-yellow satin, and looped with clusters of gold-bearded wheat. Mrs. C. H. Bonynge was in ruby velvet, trimmed with point lace and set off with a necklace cross and earrings of large and very perfect diamonds, her coiffure being ornamented with diamond stars. Mrs. J. W. Mackey's dress was in tea-rose faille; the skirt was embroidered all over with large scattered roses in tea-rose silk. She wore a collar necklace in pearls and diamonds, with bracelets to correspond. Her earrings were single white pearls, each the size of a small cherry, while in her hair was placed a diamond comb, surmounted with five large pear-shaped pearls.

Very gorgeous even for an Irishman's wife!—

Mrs. C. N. Beach, of New York, was in white brocade and satin, trimmed with antique Venetian guipure. Mrs. Ayer, of Lowell, Mass., had on a dress of old gold satin—

Of cherry pectoral hue!—

the corsage very gracefully draped with folds of fine point lace. She wore a magnificent necklace composed of rows of very large diamonds—

As large as good-sized pills—

alternating with strings of equally fine and perfect pearls. Miss Emma Nevada's dress was probably the prettiest "young girl toilette" in the room. It was composed of a corsage of crevette pink velvet, with a tulle skirt of the same hue. A tulle scarf crossed the corsage, which was also bordered with draperies of tulle, and the scarf and draperies were dotted with large pink pearl beads. The charming little prima donna was the object of a perfect ovation all through the evening, M. Jules Ferry himself coming up to salute her and spending some time in conversation with her. Mme. Hachisuka, the wife of the Japanese ambassador, had on garnet velvet, with a skirt front of satin, embroidered all over with tulips in their natural hues.

Beside all these and many other Americans mentioned, there were present many artistic celebrities, including Bouguereau, who was probably studying his next nude female figure from the

HALF-CONCEALED CHARMS

around him. There were also present a prince, a duke, a marquis and marquise, and several lords, counts, barons, and titled foreign representatives. Can any one doubt that foreigners would be struck with our plain, democratic ways after witnessing this spectacle? I know that Mr. Morton can afford to indulge his aristocratic tastes, for $40,000 is nothing to him; but every democratic republican must rejoice that this bill contributes to him $17,500 to assist him in keeping up these displays so characteristic of American representatives and so honorable to the liberality of the working people of America, who of their toil and sweat pay the taxes to make up these appropriations!

We might afford to laugh at these follies in so harmless a gentleman as Mr. Morton or so pleasing a woman as his wife, but even in their case the evil tendency of such displays were soon made manifest. At a subsequent reception given by Mr. and Mrs. Morton the English minister was the lion of the evening (Lord Lyon, at that), and at a still subsequent reception the Count of Paris was the chief guest. Now, without stopping to inquire whether we should pass these appropriations, taxing our working people for the entertainment of

BRITISH LORDS AND FRENCH COUNTS,

I may observe that France is now a republic and her elder sister should set her no bad examples, and least of all should our minister be paid out of our mechanics' pockets in direct or indirect movements to restore the monarchy of France. The Brooklyn Eagle has had telegraphed all the way from London, and published in its issue of May 28, 1884, a reproof given to our minister by an English paper, the London Truth, in these words:

It is dangerous to touch French conspirators. Mr. Morton likes his guests to leave his house agreeably impressed. He thought it best, therefore, to please his Orleanist guests by honoring the Count of Paris's pretentions to the throne. A lady asked Mr. Morton to introduce her to the Count of Paris. Mr. Morton informed the Count of this request, and he intimated that he should be pleased to allow her to be presented. Mr. Morton thereupon said to the lady: "The Count of Paris permits me to introduce you to him." The Orleanists present made use of this incident to circulate the report through France that America admitted the sovereignty of the Count of Paris. Mr. Morton erred in inviting an active, open pretender to his house, but he was led into it by American ladies, unworthy of America, who pose in Paris as leaders of society by virtue of their large fortunes and the fact that they are married to idle Frenchmen of dubious nobility. These ladies regard untitled Europeans as mean whites and fancy that a nation without nobility is a garden without flowers. Mr. and Mrs. Morton are liable, however, to meet in royalist drawing-rooms speckled peaches who would not be admitted to respectable houses in New York.

And Mrs. Lucy H. Hooper, in her letter dated Paris, June 2, and published in the Washington Post on Sunday, June 22, says:

The latest topic of the hour in American society is the attack made upon Mr. Morton by the government papers of France, and by the American Register, of Paris, as well, on account of his alleged dinner to the Count de Paris.

I most heartily agree with the correspondent of the London Truth in her strictures of those American ladies who, having married titled foreigners, at once become more European and anti-American than the natives themselves—"more royalist than the king and more Catholic than the Pope," as the French proverb hath it. If one of our society girls or heiresses chances to espouse a prince, a duke, a count, or even a baron, she at once loathes the untitled race from which she sprang, and affiliates entirely and altogether with the set into which she has married. I declare there must be something in the nature of our country people, a very mean fiber, to impel so many of them to become national Judases and deny their country.

What American, that living in Europe has still maintained as a high and holy thing the love of his or her country, but has been disgusted with the snobbery of certain other Americans who pride themselves on being ashamed of their native land and of their nationality? They scorn the society of chaste women and high-minded men, because, forsooth, those personages have been born in the United States and are undecorated with titles, while, as the Paris correspondent of the Truth remarks, they will welcome to their houses all the "spotted peaches" of the Parisian society basket. There is, for instance, an ex-mistress of the heir to a European throne who is one of the bright particular stars at the entertainments of these ex-Americans. But what are decency and morality when compared with the luster of a title? Verily this is a queer world, and not the least queer set of people in it are the Frenchified Americans, or rather the aristocratified ones, if I may be allowed to coin such a word.

Now, I ask any member of this House if he can tell of what use our embassy to France has been for the last twenty-five or fifty years, except to create, cultivate, and perpetuate these Judases,

SNOBS AND SPOTTED PEACHES,

which make up what we call American society, and for whose benefit from year to year the honest, virtuous, and reputable mechanics of the Republic tax themselves to make these appropriations?

But while others of our embassadors abroad have indulged in these harmless exhibitions of royalty, harmless except only in poisoning healthy hatred of royalty, it has been left to

JAMES RUSSELL LOWELL,

our so-called minister to London, to divest himself of all American manhood and to prove himself the merest toady and tool of monarchy and aristocracy.

Mr. Lowell, some thirty years ago, was a pretended lover of liberty, and was counted in that circle that included Wendell Phillips. In one of his "Stanzas of Freedom" he says:

Is true freedom but to break
Fetters for our own dear sake,
And with leathern heart forget
That we owe mankind a debt?
No! true freedom is to share
All the chains our brothers wear,
And with heart and hand to be
Earnest to make others free.
They are slaves who fear to speak
For the fallen and the weak;
They are slaves who dare not be
In the right with two or three.

When the war with Mexico broke out Mr. Lowell took strong ground against it, and ridiculed it in his "Biglow Papers" in Yankee phrase. He did not believe in war anyway. He did not believe that killing people was Christianly:

Ez fer war, I call it murder—
There you hev it plain an' flat;
I don't want to go no furder
Than my Testyment fer that.
Ef you take a sword an' dror it
An' go stick a feller thru,
Guv'ment ain't to answer for it;
God 'll send the bill to you.

He did not like the Southerner, and he thought the Mexican war was waged for slavery.

'Twouldn't suit them Southern fellers,
They're a dreffle graspin' set;
We must allers blow the bellers
W'en they want their irons het.

He was then for the dissolution of the Union:

Ef I'd my way I had ruther
We should go to work an' part—
They take one way, we take t'other.
Guess it wouldn't break my heart.

When the war with the South broke out, however, he seems to have changed his mind on war being murder, and he went beyond his "Testyment" for support to his opinions:

'Twunt du to think thet killin' aint perlite—
You've got to be in airnest ef you fight.
Why, two-thuds o' the Rebbles 'ould cut dirt
Ef they once thought thet Guv'ment meant to hurt.
We want some o' Gideon's sword, I jedge,
For proclamations hain't no gret of edge.
There's nothin' for a cancer but the knife.

He occasionally reminds England of her bad government in Ireland, but usually refers to the Irish as "Paddies." This is not to be wondered at, for his ancestor, after whom he is named, James Russell, belonged to the Tories, who were hunted out of Boston on St. Patrick's Day, 1776, by the patriotic Irishmen who fought under George Washington.

It is somewhat curious to observe the fact that James Russell Lowell was, before he got corrupted by the English aristocracy, the most determined

TWISTER OF THE LION'S TAIL.

Take his "Biglow Papers," and at the end of every line you can hear the brute moan. He accused England of bearing down upon the United States with "heavy hand," of giving us the "most unpleasant kind of 'sarse;'" that she was so confounded self-conceited that she thought there was no light in nature when she winked; that she carried the Ten Commandments in her purse; that she was always willing to let Ireland secede, that she might put down the rebellion in blood; that when the virtues died she claimed to be their heir; that she set up a claim to have a mortgage on the sea, and that we must teach her better by our waving flag—

Yard locked in yard; hot gun-lip kissing gun.

If that is not twisting the British lion's tail then I am not skilled in that business. God help me! I wonder, if I should be appointed minister to England, whether I could ever become such a renegade as Mr. Lowell? "The Lord be between us and harm!"

Mr. Lowell when he got to England and had two or three good dinners with his knees under English mahogany, soon ceased twisting the lion's tail and sent for an invoice of Mother Winslow's Soothing Syrup, which he administers to the brute in regular doses of Tribune teaspoonfuls before and after meals, particularly after. In 1881 England had arrested a large number of American citizens, some of whom had distinguished themselves on the battlefields of our Union. Some of them were naturalized citizens and others native-born. It made no difference to him so long as good English dinners continued; he

HEARD ONLY THROUGH HIS STOMACH.

No effort was made by him to vindicate their rights or to ask common justice for them. The law for his guidance could not be misunderstood. A measure which I introduced into the Fortieth Congress immediately after the assembling of that body received a fuller and abler discussion and consideration than had ever before been devoted to such matters in Congress. Among the leading speakers in the Senate were Conkling, Conness, Fessenden, Frelinghuysen, Hendricks, Morton, and Sumner; in the House, Messrs. Banks, Boutwell, Brooks, Butler, DAWES, Judd, KELLEY, LOGAN, Maynard, Orth, E. B. Washburne, and Woodward; all men of national reputation spoke upon it. It passed both Houses, with only four votes in the House against it and five in the Senate, and so upon the 27th of July, 1868, by the signature of the President became the law. Here it is:

Whereas the right of expatriation is a natural and inherent right of all people, indispensable to the enjoyment of the rights of life, liberty, and the pursuit of happiness; and

Whereas, in the recognition of this principle, this Government has freely received emigrants from all nations, and invested them with the rights of citizenship; and

Whereas it is claimed that such American citizens, with their descendants, are subjects of foreign states, owing allegiance to the governments thereof; and

Whereas it is necessary to the maintenance of public peace that this claim of foreign allegiance should be promptly and finally disavowed: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any declaration, instruction, opinion, order, or decision of any officers of this Government which denies, restricts, impairs, or questions the right of expatriation is hereby declared inconsistent with the fundamental principles of this Government.

SEC. 2. *And be it further enacted*, That all naturalized citizens of the United States, while in foreign states, shall be entitled to, and shall receive from this Government, the same protection of persons and property that is accorded to native-born citizens in like situations and circumstances.

SEC. 3. *And be it further enacted*, That whenever it shall be made known to the President that any citizen of the United States has been unjustly deprived of his liberty by or under the authority of any foreign government, it shall be the duty of the President forthwith to demand of that government the reasons for such imprisonment, and if it appears to be wrongful and in violation of the rights of American citizenship the President shall forthwith demand the release of such citizen, and if the release so demanded is unreasonably delayed or refused, it shall be the duty of the President to use such means, not amounting to acts of war, as he may think necessary and proper to obtain or effectuate such release, and all the facts and proceedings relative thereto shall as soon as practicable be communicated by the President to Congress.

The wayfaring man though a fool could not err in understanding that law. It was my law, first stated by me amid abuse and misrepresentation such as I am now enduring for my opposition to the anglomania then creeping in among us, and now rampant over us. The Tribune was not then abusing me. The person who is now sitting in the chair which Horace Greeley (God bless his memory!) had so ably filled had not then entered on his present occupation of waiting at the steamship wharves to catch some disreputable lord to feast him at the Lotus Club, but the New York Times was about as virulent in its imbecile yelping then as it is now. Time, however, passed on, and two years ago I had the satisfaction of hearing the leading men of both parties in the Forty-seventh Congress contending for the honor of my bill. Mr. Orth, of Indiana, at a public meeting in New York declared that this bill of mine was "as sacred to American citizens as any line in the

DECLARATION OF INDEPENDENCE."

And my honored colleague [Mr. HEWITT] said it was "a declaration of right scarcely less important to the freedom of the world than the Declaration of Independence," and he generously added:

After carefully examining the steps by which it was secured I am prepared to say that he [W. E. ROBINSON] is fully justified in claiming the legislation of 1868 as his work.

And the eloquent Senator from Indiana [Mr. VOORHEES] said in the Senate:

I honor every word and line of this act. I rejoice in its scope and meaning. When the American authorities execute it the American name will be mentioned with reverence and awe where it is now spoken with derision and contempt.

I have referred particularly to this to show how little terror there is for me at the howling of the curs now barking at me as they did then. But a few years hence some other Hewitt will do me justice for my fight with the insolent anglomania that assails me now.

I see in recent publications that the Republican press is stealing my thunder, and giving credit to Mr. Blaine for carrying this measure through Congress and for the release of Eugene Costello from British prisons. These are my honors, which Mr. Blaine himself will not try to take from me; and for the decision of the question where the honor belongs I submit to the opinion of Mr. Costello himself in his case, and to my colleague, Mr. HEWITT, in the case of the law of 1868.

The New York Tribune of to-day claims as honors for Mr. Blaine works which it denounced in its most viperous manner when I was protesting against the unjust imprisonment of American citizens, and while the British minister was forwarding this very Tribune to Lord Granville, in which it denounced this law as "irrational" for which it is now claiming credit for Mr. Blaine. I may have to say more some day soon on this whole matter. Here is an extract from a letter to Lord Granville from the British minister:

WASHINGTON, *April* 8, 1882.

MY LORD: I have the honor to transmit to your lordship herewith articles from the New York Tribune on the proceedings taken with regard to the Irish-American suspects. The tone of these articles is on the whole satisfactory.

Of course the Tribune was satisfactory to the British aristocracy. It takes some versatility of cheek to whistle now on the opposite side of the mouth. I wonder what dodo laid the egg in the nest of the old eagle which once spread its wings over the Tribune eyrie from which the bastard bird that now defiles the nest was hatched?

Well, here was this great American law, supposed to be known even to Mr. Lowell, however blinded by his new-born anglomania, that any declaration of any one against the right of expatriation is inconsistent with the fundamental principles of this Government; that all naturalized citizens in foreign states shall receive the same protection from this Government as native-born citizens, and that when any citizens of the United States are unjustly deprived of their liberty an instant demand shall be made for their release or the reasons for their arrest. Mr. Lowell openly, persistently, and stubbornly ignored or disobeyed this law. He made distinctions between naturalized and native citizens and brazenly brought them to the notice of his own and the English Government. Our poor citizens, disgusted with their treatment, ceased to make application for protection from the American Government, and we shall never know how many of our citizens pined in prison in chains which our paid minister had assisted in binding on them. I have the names of twenty at least, including Henry George and M. P. Boyton, who without having committed any crime or being even accused of such, and without any trial,

LINGERED IN ENGLISH PRISONS

for terms of fourteen or fifteen months, and then with shattered fortunes and ruined health were flung out to die by the British authorities without an honest word of protest or defense from our well-paid minister. Had we been without any minister to England not half as many of our citizens would have been imprisoned and none would have remained in prison so long.

Immediately after the organization of the Forty-seventh Congress, of

which I happened luckily to be a member, I tried to get the floor to offer the following resolutions:

Whereas it is known and admitted that certain citizens of the United States are unjustly deprived of their liberty by the Government of Great Britain; and

Whereas the President has demanded of that foreign government the reason of such imprisonment and their immediate release; and

Whereas such release has been unreasonably delayed: Therefore,

Resolved, That the President is hereby urgently and earnestly requested forthwith to use such means and take such proceedings as are designated in the law of July 27, 1868, in such case made and provided.

Resolved, That in the opinion of the House James Russell Lowell, our minister to England, having mistaken or neglected his duty as our representative in the case of these unjustly imprisoned American citizens, should be recalled.

Many of the gentlemen around me will remember how the anglomaniacs howled against me then as they are now howling, and how I was constantly ruled out of order. As I look around me now I see that many of the noisiest of my vilifiers were at the last election left at home.

After long delay I finally got the floor on the 26th of January, 1882, and delivered a speech, recounting the

OUTRAGES ON OUR CITIZENS

and denouncing the conduct of Mr. Lowell. That speech was published in a pamphlet of thirty-two pages and was circulated by the thousand. The country was aroused and demanded the release of our prisoners and the recall of Mr. Lowell.

The English dudes, whom God for some wise purpose has permitted so largely to control the press of this country, then, as now, misrepresented, belied, and tried to ignore me. The seed I had sown, however, took quick root and sprang up into vigorous growth, and I was amply sustained in my demand for protection to our citizens and for the recall of Mr. Lowell.

THE BROOKLYN TIMES.

While the English organs were denouncing my demand for protection to American citizens, the Brooklyn Daily Times of January 27, 1882, the Republican paper of my city, said:

Congressman ROBINSON doubtless represents the sentiments of a majority of his constituents in the second district in his zealous efforts to secure the intervention of his Government in behalf of American citizens confined in Irish prisons.

That is true. Every true-born American and every true Irishman and every true Englishman naturalized and having foresworn allegiance to the queen, living in my district, approved of my course. Brooklyn is a glorious city, and is composed of patriotic people from all countries and from all States in the Union. At the taking of the last census in 1880 its population stood as follows:

Statement showing the number of inhabitants in each ward of Brooklyn, N. Y., at the United States Census of 1880, *who were born in the United States, in Ireland, and in all other foreign countries.*

	Total population.	Born in—		
		The United States.	Ireland.	All other foreign countries.
First ward	18,729	12,781	3,472	2,476
Second ward	9,254	5,158	2,526	1,570
Third ward	18,271	12,377	2,218	3,676
Fourth ward	12,819	8,905	1,747	2,167
Fifth ward	18,517	11,968	4,570	1,979
Sixth ward	35,437	21,325	8,644	5,468
Seventh ward	31,663	23,584	4,573	3,506
Eighth ward	17,388	11,317	2,912	3,159
Ninth ward	15,044	9,965	3,461	1,618
Tenth ward	27,140	17,697	5,712	3,731
Eleventh ward	21,680	15,529	3,503	2,648
Twelfth ward	22,201	13,229	5,924	3,048
Thirteenth ward	21,029	15,821	1,618	3,590
Fourteenth ward	25,559	16,377	5,128	4,054
Fifteenth ward	23,654	17,570	1,645	4,439
Sixteenth ward	42,712	26,690	824	15,798
Seventeenth ward	30,088	21,052	4,230	4,806
Eighteenth ward	23,926	16,266	1,691	5,969
Nineteenth ward	27,661	19,681	2,098	5,882
Twentieth ward	24,188	18,337	2,943	2,908
Twenty-first ward	31,956	22,382	2,913	6,661
Twenty-second ward	25,473	18,703	2,717	4,053
Twenty-third ward	14,396	11,728	1,085	1,583
Twenty-fourth ward	8,823	6,497	1,386	940
Twenty-fifth ward	19,055	14,630	1,274	3,151
The city total	566,063	388,969	78,814	98,880

In a speech which I delivered in this House March 2, 1869, I referred to the people of Brooklyn as follows:

My district, for intelligence, wealth, industry, education, schools, and churches, for merchants, ministers, the medical and legal professions, is perhaps the best district in the United States—equal, at all events, to any in all characteristics mentioned. The population of that district is perhaps less than one-fifth of New England birth or origin, less than one-fifth of English and their descendants. The remaining three-fifths or more are German and Irish by birth and descent. By the last State census of 1865, which is generally believed to be lower than the facts would warrant, in Kings County, of which my district embraces about one-half, there were 197,243 persons natives of the United States, and 112,869 persons natives of foreign countries, with about 1,000 born at sea or at places unknown; in all 311,090. Of these 59,444 were born in Ireland, 28,310 in Germany, 15,555 in England, 2,797 in Scotland, 1,461 in Canada, 1,195 in France, 241 in Holland. Of the voters in Kings County there were 29,950 native born and 28,274 naturalized—in all 58,224 voters—while there were 53,435 aliens unjustly kept so by the law requiring five years' probation.

Let me say also that 1,482 Irish, 1,000 Germans, 364 English, 312 Scotch, 782 aliens, and 1,216 of unknown birth, mostly perhaps aliens and generally Irish, enlisted in the armies of the Union. Consequently in 1865 there were 12,367 widows to 3,135 widowers in my county, showing that many had fallen in battle in defense of the flag of the Union. Whom do I represent as member of Congress chosen by this mixed population? I am proud of the New England minority in my district, but I am not ashamed of the Irish majority. Those thousands of widows whose husbands fell on many a Union battlefield deserve to be remembered by Brooklyn's representative on this floor. Surely the 59,444 natives of Ireland in my city who pay taxes, work and fight for the country, ought not to be ignored, or obscured, or eclipsed by the much smaller number of New England's sons. All the other States in the Union do not furnish to Brooklyn half as many of her population as she receives from Ireland alone. If I have, therefore, attended reasonably well to the general interests of my constituents I should not be blamed for saying a word for Ireland, from which more than one-half of my constituency springs and which is loved to-day as no nation except the United States ever was loved by all her sons except a very despicable and recreant few.

But not only did I, in my defense of American prisoners confined without cause in British dungeons and in my demand for the recall of Mr. Lowell, represent the sentiments of the people of my district, but I met with the support and approval of all true Americans throughout the United States. I have before me hundreds of extracts from the proceedings of legislative and public bodies and from numerous leading newspapers, all indorsing my views and sustaining me in my present opposition to retaining Mr. Lowell at London. Even those who at first misrepresented and abused me were compelled to fall in with the sentiments which I so faithfully tried to stimulate.

NEW JERSEY AND NEW YORK.

On the 20th of February, 1882, the house of representatives of the State of New Jersey unanimously adopted resolutions indorsing my conduct in respect to Mr. Lowell and our prisoners, and the Legislative Assembly of the State of New York on the 6th day of March, 1882, unanimously adopted a similar resolution, both bodies mentioning my name.

The New York Tribune, however, led the gang of my traducers.

NEW YORK COMMERCIAL.

The New York Commercial, of January 27, 1882, edited by the late Hugh Hastings, says:

The Tribune sneers at Hon. WILLIAM E. ROBINSON as a representative of the Irish. The editor of the Tribune forgets that "Richelieu" ROBINSON was a graduate of Yale forty years ago and was a member of the Tribune staff when the present editor (Whitelaw Reid) was warbling "Clams! fine clams!" for sale in a one-horse, dilapidated wagon through the streets of Xenia, which accounts for his passion for music.

NEW YORK TRUTH.

The New York Truth of February 16, 1882, in a leading editorial headed "Are we cowards?" speaks as follows:

When a member of Congress has the temerity to ask our Government to demand of Great Britain her reasons for imprisoning American citizens without charging them with crime, and denying them the right of trial and defense, other Congressmen call him a demagogue, and an English paper [The New York Times] published here by a quondam dealer in foul literature, laughs at him.

The question raised by Mr. ROBINSON in Congress is not one of the right of England to define crime and punish it. England may make it criminal to wear a sprig of green in the button-hole if she chooses, and any American citizen so offending would be entitled to no greater consideration than a British subject if the crime were charged and proved against him by due process of law. But if an American citizen sojourning on British territory is arrested without cause and denied the right to a trial, he is entitled to the interference of this Government if American citizenship is worth anything.

Shall we permit our legation to remain in London, and our consuls to continue our relations with England, while our citizens are arrested without charges preferred, and imprisoned without indictment or trial?

We trust that Mr. ROBINSON and Mr. COX will not allow themselves to be driven from their position by the billingsgate of a notorious corruptionist on the floor of the House, nor the inane "humor" of Gladstone's New York organ.

BROOKLYN LAND LEAGUE.

At a meeting of the executive committee of the King's County Land League, held February 25, 1882, Judge Rooney in the chair, a series of resolutions were adopted denouncing Mr. Lowell for neglecting to perform his duty to American citizens and approving the conduct of their Representative, W. E. ROBINSON, in upholding the dignity and vindicating the rights of American citizenship.

NEW YORK DAILY NEWS.

The New York Daily News, a paper of immense circulation and influence, declared—

That Mr. Lowell has misrepresented American sentiment, ignored the claims of American citizenship, and failed to recognize, or, recognizing, to fulfill the obligations of the mission to which he was appointed, has been made patent to the popular understanding. No accumulation of evidence could make it more emphatic. The most singular feature of the situation is that Mr. Lowell, knowing, as he must, the sentiments of his countrymen in the premises, has as yet failed to tender his resignation.

THE NEW YORK SUN.

A very able leading editorial in the New York Sun of March 14, 1882, headed "British outrages on American citizens," opened with these stalwart sentiments:

The time has come for the plainest speech in regard to the outrageous treatment of American citizens by the British Government. There must be an end of mealy-mouthed and tortuous diplomacy. The rights of citizenship must be asserted to their fullest extent and defended to the last extremity. Otherwise the United States will be disgraced in the eyes of the world. The minister was content to see this American citizen and others lodged in cells upon trumped-up charges, most of them known to be on the testimony of professional inform-

ers, without uttering a single manly word in their defense. Mr. Lowell let his fellow-citizens remain in jail.

THE TRUTH AGAIN.

The New York Truth of March 15, 1882, asked:

How much longer is American citizenship to be insulted by the snobbery of an American minister?

THE SUN AGAIN.

The New York Sun of March 17, 1882, says:

In one of the official dispatches just communicated by the State Department to the Committee on Foreign Affairs, Mr. James Russell Lowell exhibits himself in an extraordinary attitude.

He appears as the apologist for a British outrage on the rights of American citizenship.

Two American citizens, McSweeney and Hart, have been arrested and imprisoned by the British Government. They are charged with no crime. They are denied a trial. In time of peace these American citizens are subjected to the hardships of martial law.

Mr. Lowell inquires of Lord Granville on what charge Hart is held. Lord Granville replies that he will not tell, but begs Mr. Lowell to believe that Hart is guilty of something or other.

Thereupon Mr. Lowell telegraphs to Washington that he "does not believe that either of the two is more innocent than the majority of the persons who have been arrested."

Innocent of what?

It is not Mr. Lowell's part to express any opinion as to the innocence or guilt of the imprisoned American citizens. His duty is to find out on what charge they are held, and why they are not brought to trial.

The lot of these American citizens, with the protection of whose rights Mr. Lowell is charged, was hard enough before he became a volunteer accuser against them.

COMMERCIAL AGAIN.

The editor of the New York Commercial, Hugh Hastings, esq., speaks as follows in that paper of March 25, 1882:

Congressman ROBINSON, of New York, paid his respects to Mr. Lowell again yesterday. He was informed that the State Department was now in active correspondence with the British foreign office regarding the imprisoned Americans. In the House of Commons yesterday Sir Charles Dilke, in reply to Mr. Leamy, member for Waterford, said that the government was considering the representations of the Government of the United States regarding the trial or the release of the Americans imprisoned in Ireland under the coercion act. It is evident from this that Secretary Frelinghuysen is actively pushing this business and is making amends for the remissness, indifference, and neglect of Mr. Lowell. But, no matter how energetically the Government prosecutes this work, Lowell's behavior can not be condoned. He has disgraced the office he holds, and should be promptly recalled.

PRESIDENT PRO TEMPORE.

The President *pro tempore* of the Senate of the United States, Hon. David Davis, in a letter dated March 28, 1882, says:

England may suspend habeas corpus in time of profound peace, and, under that suspension, she may assume to violate the letter and the spirit of existing treaties. But when she touches the person and restrains the liberty of an innocent American citizen she does it at her peril, and should be made to feel the consequences of that arbitrary and indefensible act.

The time has come when the fullest rights of American citizenship must be asserted. The present experience and other examples equally trying to public patience render this assertion now an imperative obligation, without which the United States would deservedly lose position before the world.

SUN ONCE MORE.

In the New York Sun of March 28, 1882, a very able leading editorial was published, from which I take these sentences:

When Mr. Brooks, consul of the United States at Cork, besought the aid of Mr. Lowell in behalf of John McEnery, in jail at Limerick, eight months ago, he was told in the spirit of the Secretary of State, and under his instructions, "It is manifestly entirely futile to claim that naturalized citizens of the United States should be excepted from its operation" [that is, the coercion act].

Mr. Lowell not only declined to interpose for McEnery, who wrote from Limerick prison January 16, 1882, "I challenge any person in Ireland to prove any crime against me more than being an American citizen," but he branded him with a degrading inferiority for being "a naturalized citizen." This American minister at London, for the instruction of the British Government, drew a broad line of distinction between native and naturalized citizens, right in the face of the law of 1868.

No demand, in the proper sense of that term, has been made. Mr. Lowell inquired, with great deference, for what cause one of the prisoners was held, and Lord Granville told him to go and read the warrant of arrest, as he had no further information to give. After that rebuke Mr. Lowell did not feel himself equal to repeating the inquiry, even if the prisoners should rot in their cells. He left them to their fate.

The path of duty is plain. It admits of no quibbling or evasion, if there be courage to discharge it. We have had more than enough of trifling. These citizens have been in jail nearly a year. The people demand their release, and they must be released. Woe to the public man or the party that stands in the way of this act of justice!

NEW YORK COMMON COUNCIL.

On the 28th of March, 1882, the common council of the city of New York, on motion of Alderman Martin, adopted the following resolutions with only one dissenting voice:

MINISTER LOWELL ARRAIGNED.

Whereas the pusillanimous conduct of Minister James Russell Lowell, at the Court of Saint James, in treating with Earl Granville regarding the arrest without warrants and imprisonment without trial of American citizens, is so utterly inexcusable and so directly in violation of the national sentiment respecting the rights and immunities belonging to American citizenship that it calls a blush of shame and indignation to the cheeks of every lover of this Republic; and

Whereas the gallant conduct of the representatives of the United States in the harbor of Smyrna, on the ever-memorable occasion of the protection afforded Martin Koszta by the American consul and Commander Ingraham, of the United States sloop-of-war Saint Louis, is yet fresh in the recollections of many of our people, and the outburst of popular approval then bestowed upon the brave Ingraham clearly proved that his prompt and decisive action struck a responsive chord in the hearts of the American people; and

Whereas the action of Lowell in dealing with England and Ingraham in dealing with Austria, in parallel cases, is in such marked and painful contrast that a sensation of indignation and mortification now pervades the people of this country, and the common council but voices the wishes and feelings of the people of this city when it asks in their behalf that the President of the United States shall recall Minister Lowell and appoint in his place a citizen of this Republic who will properly represent the American people at the English court—a sycophant is neither a safe nor creditable representative of a free people to keep at any of the monarchical courts of Europe or elsewhere:

Be it therefore resolved, That Chester A. Arthur, President of the United States, be, and he is hereby, in the most earnest yet respectful manner, requested to recall Minister Lowell from the British court and replace him by an American citizen who will see to it that the English Government will not dare to outrage American nationality.

NEW YORK HERALD SPEAKS.

My speech was delivered in this House on the 26th of January, 1882, and the pamphlet edition had a large circulation. The papers which abused it in their telegraphic reports soon began to show symptoms of reason and common sense. The New York Herald of April 1, 1882, contained a long leading editorial headed "Imprisoned Americans in Ireland." It was the first time in that paper that the subject which I had introduced to Congress had a fair statement in its columns. I copy a few sentences:

Either Minister Lowell has neglected his duty or the British Government is, for political purposes of its own, trifling with the United States on a subject on which it ought to understand that trifling is a denial of justice which one country can not be expected to tolerate from another.

So long ago as the 4th of March Secretary Frelinghuysen directed Mr. Lowell by cable to ask that American citizens imprisoned under the coercion act in Ireland be brought to a speedy trial or else released. Mr. Lowell reported that he had obeyed the instructions, and this is the last that has been heard of the matter since the 14th of March, when these facts were communicated to Congress by the State Department. The American public has waited with more or less patience to learn that the very reasonable demand of the United States has been complied with, but not a word has been heard and we are now in April.

We hope therefore that the House of Representatives, when it meets to-day, will ask the State Department what is the actual condition of the matter, so that we may know whether American citizens continue to lie in English prisons, in spite of the demand and protest of our Government, because the American minister in London has neglected a duty toward them or becuse the British Government has refused the act of justice and common civility which was asked from it. If the fault lies with Mr. Lowell he ought to be recalled and some one sent in his place who is intensely enough American in feeling and sufficiently a lover of justice to do his full duty toward helpless fellow-citizens unjustly detained in foreign prisons. If, on the other hand, the British ministry, for partisan or other reasons, has refused or neglected our just demand, the sooner we know that and sensible Englishmen also know it the better.

We on this side of the water were certainly surprised when a liberal government, so called, adopted the coercion act, which extraordinary measure suspended the writ of habeas corpus in Ireland and authorized the arrest and imprisonment without trial of whomsoever the government chose to suspect of wrongdoing. But it is the business of the United States to see to it that its own citizens are not subjected to wrong or outrage in foreign lands. In no case has a government the right to hold foreigners in prison and deny speedy trial to them, no matter what it may choose to do to its own subjects. They must have a speedy trial; they must not be made to lie in prison for months without trial. That is intolerable and can not and will not be endured.

Our Government has requested a simple act of justice from the British Government. Its request ought to have been granted at once. Indeed, we ought never to have been obliged to make it. But this request has been allowed to lie unanswered since the 4th of March last, so far as the public knows, and that is, we take leave to say, a very gross incivility toward the United States, making every allowance for the possibility that the American minister in London may have been too efficiently taught by Mr. Blaine to put too low an estimate upon the rights of American citizens in Ireland. But we hope that the British Government will not suffer itself to be misled by that possibility. The United States will not longer tolerate the imprisonment in Ireland of American citizens without trial. We have borne patiently and civilly quite as long as is proper with what is a gross outrage, and we have requested reparation and justice in moderate tones until Americans begin to see that a louder and more peremptory voice may be necessary. That will be heard very soon if simple justice is not at once granted to the imprisoned Americans.

TRUTH ONCE MORE.

The New York Truth of April 2, 1882, says:

Nothing could be better evidence of the fact that the press does not lead public opinion, but is led by it, than the conduct of the newspapers regarding the arbitrary imprisonment of American citizens in Ireland. Congressman ROBINSON, of Brooklyn, only a few weeks ago, in the House, made a splendid speech in behalf of these men, breathing throughout the spirit of American liberty, and was sneered at for his pains. The only daily newspapers in New York to sustain him were Truth and the Commercial. But after a little while the Sun fell in line, then came the World, then the Times grew moderate in its opposition, and yesterday the Herald turned a somersault.

OPINION OF ATTORNEY-GENERAL.

The reiterated claim of England that she could under the suspension act detain American citizens without charge of crime or color of trial was frequently indorsed or admitted by our minister and not boldly denied by the Executive or State Department. In order to have this simple question settled, I introduced a resolution into this House in the following words:

Resolved, That the Attorney-General of the United States is hereby directed to communicate to this House his opinion in writing on the following question:

If JOSEPH WARREN KEIFER, Speaker of this House, or Alonzo B. Cornell, governor of the State of New York, or Charles Carroll, a laborer in the department of public works in the city of New York, being a citizen of the United States, visit any part of the British Empire, and should there be arrested without having committed any crime, and without any definite charge of crime being alleged against him, could the English Government, by suspending the habeas corpus, or otherwise, lawfully detain him indefinitely on suspicion without trial or without any right in our Government to demand his release? Also his opinion on the application of the law of July 27, 1868, to such cases, and the President's duty under it.

That was referred to the Committee on Foreign Affairs, and on the 14th of February, 1882, was reported back by Mr. Orth with a recommendation of the committee to lay it on the table. This I considered the most important resolution and the best step we could make in the controversy. I demanded a division, and on the count could only get 45 votes against tabling it. The yeas and nays were ordered, and 102

votes were recorded against it. Had the Democrats all voted with us the act of tabling would have been defeated. But so many of them voted with the Republicans, refusing to ask even for the legal opinion of our own Attorney-General, that the verdict of the House seemed to be that they did not care even to ask for information, and so our citizens lingered out the weary time in prison.

THE YEAS AND NAYS.

The yeas and nays were as follows: yeas 117, nays 102, not voting 73.

YEAS—117.

Aiken,	Farwell, Sewell S.	Miles,	Smith, A. Herr

So the report of the Committee on Foreign Affairs was agreed to.

The Democrats voting with the Republicans were 25; the Republicans voting with the Democrats 18. Had the 25 Democrats voted with the great majority of their party the vote would have been—yeas 92, nays 127. Why these Democrats voted against their party I never could understand. The British minister here and the English Government interpreted it to mean that Congress did not really care whether Irish-American citizens were insulted or not. And the British minister thought it of importance enough to communicate my resolution and the vote "tabling" the same, which he informs his lordship was the same as killing it, in a special dispatch the very day the English victory was achieved in this House.

In the mean time our citizens still continued in prison, and Mr. Lowell when he did anything did it so reluctantly that it had better not been done at all. Remonstrances against his conduct and in favor of mine poured into Congress, most of them mentioning my name, and many of them ordered printed in the RECORD. On the 5th of April the President sent the facts to the House. On the 8th of April Mr. West, the British minister, inclosed to Lord Granville copies of the New York Tribune of April 5 and April 6, in which the British idea was defended that England could imprison American citizens without cause under the suspension act, and referring to the act of July 27, 1868, as an "irrational act." It has always been the hobby of the British minister to represent the acts of Congress as done to curry favor with the Irish vote and did not mean what their acts seemed to mean.

On the 25th of April, 1882, I delivered another speech, which was also published in a thirty-two-page pamphlet and largely circulated, in which I called for speedy relief to our citizens in prison and a speedy recall of our minister. Toward its close I gave the following description of two kinds of American citizens:

WHAT IS AN AMERICAN CITIZEN?

It is time, sir, that we should come to an understanding with the rest of the world as to what an American citizen is. England tells us, and our minister echoes their ideas, that they will molest no American unless he is suspected (of Americanism!). The brainless throng of folly and fashion that go abroad from this country to spend the money which their fathers got by industry and energy, or from fraudulent contracts, and who feel themselves in the third heaven of happiness if they can bask in the splendor of effete monarchy or touch the hem of the garment of some disreputable lord, try to pass themselves off as the true type of Americanism. How heartily these proud nobles despise these toadies every person of sense knows, but they will never be molested, for these lords and dukes know that there is not enough of American manhood in a shipload of them to manifest itself. They will try to forget American republicanism by fawning and kneeling around the tyrants and oppressors. But they no more represent or typify American manhood than the capon of Bucks County in Pennsylvania represents the game blue hen's chicken of Delaware. There is not a drop of genuine American blood in their degenerate veins.

But a genuine American, who believes in Bunker Hill and the Declaration of Independence, who goes back to visit the paternal home of his ancestors in Ireland, who loves liberty and hates oppression, who sees English insolence and despotism in Ireland and is not afraid to express himself in respectful and legal Yankee language against the tyrant and for the oppressed—he will always be suspected and in danger of imprisonment. An honest, hearty, manly American is as terrible to throned or titled tyrants as dynamite. A true American traveling in Europe is a peripatetic protest against monarchy and monopoly. He will impregnate the air wherever he goes by the healthy perfume of republicanism, and you can no more divest him of that dangerous contagion than you could rob the rose of its perfume, even if you carried it into the infernal regions, where its fragrance would be exhaled from every shriveling leaf. Imagine, if you can, any genuine Yankee visiting Ireland and seeing the heartless landlord evicting the helpless tenant and his wife and children from the little cabin in which his fathers for centuries lived and died, without muttering in poorly-suppressed anger his abhorrence of the oppressor and his sympathy for the victim; and he of course would be a suspect.

Now, that is the kind of Yankee for whom we seek protection. The other kind do not need it and are not worth it. And this protection we must have. There are thousands of Englishmen in every large American city who refuse to be naturalized, who have their St. George's societies, and praise up monarchy and run down republicanism, and we do not throw them into prison as suspects. If we did England would promptly and potentially demand their release. Now, England must give as well as take. If her subjects can mingle in society here and express their preference for monarchy our citizens must be allowed to travel there and express in respectful language their preferences for republicanism, unless you intend to give in to England's insolent intentions, as tersely expressed by James Russell Lowell:

It's you're the sinner allers, she's the saint.
Wat's good's all English, all that isn't ain't.

And it must be understood that no American citizen shall ever be forced to accept the degrading terms of leaving the country never to return. If any American citizen violates any law let him have a fair and speedy trial. If guilty and convicted let him be punished according to law; but we say to England now, and she must listen and hear, that we will not allow her to arrest any American citizen on suspicion, and then, when she can not prove any crime against him, annex degrading conditions to his release, unless she consents that we can do the same with her subjects.

LOWELL'S IMPEACHMENT.

The publication of this speech again drew public attention to the conduct of our minister, and the demand for his recall was renewed. Had a resolution been in order before the House to pass a vote of censure on Mr. Lowell it would have been almost unanimously adopted; but the only way to get such a resolution in, under the rules, was to move his impeachment. I drew up an impeachment resolution, and consulted some prominent statesmen upon the subject, but I was advised that in a very few days Mr. Lowell would be recalled, and so my resolution yet lies in my desk. The public clamor for his recall, however, continued.

THE HERALD ONCE MORE.

The New York Herald, of May 22, 1882, in its leading editorial, says:

We declared our opinion a few days ago that it is expedient for President Arthur to put another minister at London in the place of Mr. Lowell. When, however justly or unjustly, the American minister at London does not possess the confidence of several millions of his countrymen, it is time for him to withdraw and for another minister to be put into his place. We do not censure the acute sensibility of these millions of Americans to what is occurring in Ireland and affecting their intercourse and business with friends and kindred across the sea. They are the radicals and destructives who would obstinately maintain at London a diplomatic representative who has already awakened a domestic distrust that may ripen into domestic disorder in possible contingencies.

The next day, May 23, 1882, in another leading editorial, it says of Mr. Lowell:

He does not represent this country adequately and just as it should be represented in England at this critical time. His mind does not seem to seize the relation of the American people to this crisis in Irish affairs, and he thus misses a proper comprehension of what is and must be the central and important point of interest in all negotiations likely to be carried on through him. Mr. Lowell has served his time. He should give way to another now.

The Washington correspondent of the New York Herald, under date

of May 25, 1882, gives the opinions of members of Congress on Mr. Lowell's recall. The writer says that the general sentiment in both Houses of Congress is in favor of his recall. Senator FARLEY, of California, declared that his neglect of American prisoners demanded his recall, and his successor should represent the stalwart sense of the people that the rights of an American citizen are paramount. Senator CONGER of Michigan, Senator COKE of Texas, Senator LOGAN of Illinois, Senator CAMERON of Wisconsin, Speaker CARLISLE, and Representative WILLIS of Kentucky, with many others mentioned, favored his recall and the appointment of a successor more imbued with stalwart Americanism and less under English influences, thus fully sustaining the demand which I first made for his recall.

THE NEW YORK WORLD.

A very able letter from Washington in the New York World, under date of May 25, 1882, advocates Mr. Lowell's recall, against whom it makes this charge:

He has transgressed its (the United States) laws and its treaties, disobeyed its instructions, and sacrificed its dignity.

In support of this charge the writer refers to Mr. Lowell's disgraceful conspiracy with British hirelings to terrorize American citizens to accept their release from British prisons on condition of departing from the country never to return, in despite of our treaties with England securing to our citizens the right to remain and reside securely in that country. A leading editorial of May 26 indorses the correspondent's views.

ENGLISH ORGANS.

Even the organs of English opinion in England and Canada gave up the idea that Lowell could maintain his position. In the New York Herald of June 2, 1882, an article was copied from the Toronto Telegram, in which it said:

It is apparent that the agitation that has been going on in the United States for some months past for the removal of Mr. Lowell from the high post of United States representative at the Court of St. James is about to be successful.

THE EVENING POST.

The editor of the Evening Post, of May 26, discusses the question of Mr. Lowell's successor, but fears that—

There are few men East or West who can resist the blandishments of a great, wicked city like London—

And expresses a doubt whether my colleague from New York [Mr. COX] could resist British blarney:

He is intelligent and perhaps susceptible to flattery, and is literary; and when the British critics got around him and puffed his books he would forget his hatred for the Crown and the aristocracy.

All this time the press continued their bitter attacks upon me, even when falling into the support of my original ideas.

CHANGE IN WASHINGTON SENTIMENT.

Any one who was acquainted with Washington, as I was, forty years ago, and comes to visit it now will be forcibly struck with the change. Then Ireland was the theme of universal praise and England was held in contempt, if not in abhorrence. Persons driving out with liveried servants were despised, and the boys hooted at them in the street. Now Ireland is in the shade and England is worshiped and her worst faults imitated. Not only the President and his Cabinet, but Senators and members of Congress, officers of the Army and Navy, and clerks in the various Departments have their liveried servants and put on the airs of dukes and princes, and the Democrats seem to have the loudest liveries. The nameless throng of upstarts who have been enabled by fraud or doubtful means to raise money enough to buy a carriage have their livery and degrade American labor by dressing up their employés as monkeys in a show. What remedy have we for this except to have the proof of the fact and never allow any one guilty of this outrage on American manhood to be elected to any office in the gift of an insulted people? There ought to be a law passed prohibiting such degrading practices. It is fixing the mark of slavery on the working people.

When after many years' absence I returned to Washington and first struck this British influence between the eyes the flood of vituperation from the New York Tribune, New York Times, and other echoes of English snobbery was perfectly appalling. My friends stood aghast at the terrific roar of the contest, and the late able editor of the Brooklyn Eagle could go no further than write an excusatory editorial in its issue of January 28, 1882, headed "Fair play for Congressman ROBINSON." He quoted the resolution I had introduced into this House, which caused all the clatter, and cautiously said:

It seems to us that this resolution does not justly challenge the opposition of any citizen who sets any value upon his citizenship.

If the press now would only have the common decency to quote what I say and fairly report what I do, they could not justify the opposition which they are keeping up against me. Every true American who knows what I am doing heartily approves my conduct.

My efforts finally seemed to me to be crowned with success, and in the exuberance of my joy I thundered in the ear of this House that—

When I came here I found the American eagle drugged and drowsy, his blood poisoned with political pyæmia, his beak filled with Lowell garbage, and his pinions wet with the mildew of monarchy. I roused him from his ignoble torpor, I brushed the mildew from his plumage, I gave his majestic voice to the music of Liberty, and his imperial wing to fan the tempest and soar to the sun.

Alas, sir, my prophetic soul was doomed to sorrowful disappointment! The bird has had a relapse. The Lowell garbage still impedes his scream, and the mildew of monarchy hangs heavy on his wings.

The New York Sun of August 16, 1882, copies from the Cincinnati News-Journal the following:

FOOLS IN WASHINGTON.

If it were put to a vote to-day two-thirds of the fashionable society of Washington, male and female, would vote for a monarchy, and titles, and stars, and garters.

DITTO IN NEW YORK.

And the Washington Daily Post, of December 27, 1882, in a leaded editorial paragraph says:

The tone of some of the New York dailies and of what is called society in that city would seem to indicate that the measure of Gotham's ambition would be filled if it were quietly suffered to regard itself as an annex of London.

ANGLOMANIA.

In the leading editorial of the New York Sun, of November 25, 1883, I find these paragraphs:

At the time of the evacuation of New York, the centenary of which we celebrate to-morrow, there was not universal rejoicing among the citizens. There were men here whose happiness all went out with the red coats.

They were the anglomaniacs of the day. The Revolution, as is well known, received a far from unanimous support from the colonists. Many of them, including especially some of the richest, remained loyal to the British Crown. They detested the democratic theories of Jefferson, for instance; were anxious to preserve the aristocratic distinctions which depend on a monarchy, and dearly loved a king.

Previous to the evacuation there was terrible and entirely justifiable alarm among the anglomaniacs, or Tories, as they were called in those days. Thousands of them hurriedly fled from the city and country, for it was known that the success of the Revolution was soon to be formally acknowledged by England. Many transports left the harbor loaded with Tories and their household effects, some going to Nova Scotia and others to the Bahamas and to Great Britain. The Tories felt that they must leave or be hanged. They abandoned their estates and went away penniless.

For the patriots hated the Tories even more bitterly than they did the British enemy. They resolved to confiscate their property and drive them from the country in perpetual banishment. One of the leaders of the Revolution declared that "there ought no Tory to be suffered to exist in America. Until the goats are separated from the sheep we must expect to row against the stream."

The Society of the Cincinnati was founded by field officers of the patriot army, and the honors of its members, transmitted to their posterity, were to be forever perpetuated. The distinction was then so great that our forefathers trembled for the consequences of making it hereditary in families.

But what a change has taken place in these hundred years! The boast which now most stirs the envy of Newport is not of descent from the patriots, but from the Tories of the Revolution. A trace of Tory blood is coveted by the aspiring aristocrat. The anglomaniacs of this day are not driven into exile and despoiled of their possessions. They have become the leaders of fashion and the exemplars for our most luxurious society. To be mistaken for Englishmen is their highest and fondest ambition.

DIPLOMATIC FOLLIES.

Our diplomatic establishments abroad are among the chief causes of the growth of this un-American snobbery. Our codfish aristocracy go abroad, and after being presented at some profligate courts are ever afterward unfitted for common-sense existence. They prefer the "spotted peaches" of the European baskets to the delicious products of Delaware and the Jerseys "without freckle or speck." The silly airs put on at our embassies I have already noticed, and, from recent report, the Lowell family seem willing to contribute their share.

I read an extract which has gone the round of the papers; I cut it, I believe, from the New York Telegram:

The cynosure of all eyes at a recent fancy ball at the Countess of Stanhope's, in London, was the niece of Mr. Lowell. The most wonderful things about Miss—

I will not mention her name, although it is here by her own consent, I suppose—

were, it seems, the shoes she wore upon her tiny feet, adorned with insteps "too aristocratically arched" for a fair republican. These shoes were made of yellow Spanish velvet, with high French heels, and laced up the side. The eyelets for the cords to pass through were rimmed with solid gold, and to the side of each was set a precious stone, first a ruby, then a sapphire, then an emerald—

Mr. LYMAN. The emerald was a compliment to Ireland.

Mr. ROBINSON, of New York. I paused just long enough on the word to attract the attention of the cultured gentleman from Massachusetts without referring to Ireland, but he has supplied the deficiency—

then an opal, and over again in the same order. The top of the shoe was finished in the same fashion, and in front were sixteen tiny gold chains, caught by a cluster diamond pin.

Now, sir, there is the description of his niece; and that was after some schooling by the uncle. And I challenge this House if you can show me one thing he or any of his family has ever done for the honor of American citizenship during the whole time he has been misrepresenting us, except the tiny shoes on the too aristocratically arched American insteps. If you can point me to anything else he has done I shall withdraw my opposition to the appropriation for his salary.

But that is not the worst of it. These people when they go over there seem to be crazy to be introduced to court. And when the family of one of our ministers is so distinguished, the first thing that they think of is to get into the same society. I will read an extract from a letter which I have seen floating around in the papers. I do not say that it is genuine; I rather think it is a forgery. But it is so like what might have been written that I will read it. It is from a young lady who went over to England recently and was introduced to the court by Minister Lowell. That is the most that he seems to be doing there—to look

after the length of the dresses and trains worn by those who are presented to the Queen. And she is no great things herself, anyway; but I have not time to say anything about her, for you have limited me. It has been reported that a young fashionable lady in New York has preserved some of the water in which the Prince of Wales washed his face when he was here. [Laughter.] What a promise there is for such a girl to become worthy of American motherhood!

AN UNHAPPY AMERICAN GIRL.

But here is the lady to whom I have referred, who writes home to her friend Matilda in these words:

I've a great bit of news to tell you, Matilda.
The Prince of Wales was introduced to me at Ramsgate.
They say he is a Guelph. What is a Guelph? Something horrid, I suppose.
He said he found American ladies cleverer than English women.
He is slightly bald-headed, but his face is almost covered with hair.
What a pity he's married.
I know I made an impression on him, for he wanted to shake hands with me ever so often, especially when nobody was looking at us.
I trembled a good deal. It is awful flustering to stand behind the curtain of a bay window and have a man who is going to be King of England squeeze your hand.
When Lord Reginald—I forget his other name—came up and interrupted us, I could have screamed with disappointment.
O, Matilda, if I have to return and go among common folks again, I know I shall die!
But there's no escape from it.
The future is a dull, dreary blank.
What is home to me now, Matilda, except to eat caramels?
YOUR WRETCHED LOUISE.

MR. LOWELL EN COSTUME.

I have here a piece that I cut from the Washington Daily Republican of December 19, 1883, a paper published in this city for the benefit of gentlemen on this side of the House, to which I have recently come. [Laughter.]

One of the oldest Democratic Representatives in the House says that while he was abroad last year he called upon Minister Lowell at his residence in London. Said he: "I found him at home, but before I had been in his company thirty seconds I felt that my visit was most inopportune. Mr. Lowell was arrayed in queer apparel—

Mind you, that, too, with a law of Congress which directs our American representatives to dress as American citizens—

Mr. Lowell was arrayed in queer apparel, a cross between the attire worn by Oscar Wilde and the regulation court costume prescribed for the natives who attend upon the queen's "drawing-room" receptions. I undertook to tell Mr. Lowell that I was a Democratic Representative in the American Congress, but he was too agitated to pay much attention to me. While I was firing off patriotic periods he was doing his utmost to hide his knee-breeches and black silk stockings under the table. I soared up and spoke of our progress and national importance—

I suppose this Democrat brought out my American eagle and gave it an airing—

He made a strong effort to maintain the conversation and keep his somewhat attenuated shins in the background, but it was no go. I tried to keep my eyes off them, but when he dropped his aspirates with a sort of baked-beans accent and said "ither" and "nither" I had to wilt, and our interview closed coldly and formally. He is the best nickel-plated Englishman I ever met.

MR. LOWELL NEGLECTING THE FOURTH OF JULY.

Now, in regard to the Fourth of July in London. Have I not reason to move that the salary of our minister at London be stricken from this bill? Here is what I have cut from a paper in regard to that:

For twenty-five years Americans in London have had a dinner on the 4th of July. The United States minister has invariably presided. This year Minister Lowell declined on the ground that he was to preside at the farewell dinner to Henry Irving, the English actor.

"English actor," mind you!

His action excited much indignation among the Americans in the city. After he reception at the rooms of the American consul a meeting was called, and he following resolution was passed:

"*Resolved*, That we have learned with regret and deep humiliation that the usual dinner held in London in celebration of the anniversary of American independence has this year been dispensed with, owing to the refusal of the American minister to take part in the same on the ground that he was engaged to attend the dinner given to Mr. Henry Irving."

This Englishman was coming here to grab a lot of our money and carry it back for the gorging of an English appetite.

Resolved, That we deplore and condemn the action of the American minister in the premises, and take occasion to express the hope that we may before long have a representative of the United States in London who will understand that his duty to the American nation is paramount to his duty as a patron of the drama, as a friend of the actor, and as an advertiser for the theatrical manager.

That is signed by Albert Van Waggener, Edward P. Temple, and a number of other respectable American gentlemen then in London.

MY LORD RECTOR.

Mr. Lowell's consent to stand for the lord rectorship of St. Andrew's University was really a resignation of his office as United States minister. The holding of the two offices was utterly inconsistent and unjustifiable. It looked more like suggesting that he had bartered the rights and liberties of our citizens for the trappings of the lord rectorship. The Rochester Post-Express of December 12, 1883, an able Republican journal, thought him very justly censurable, and an able writer in that journal of that date, signing himself "Lex," describes it as a violation of the Constitution of the United States and of the law of nations, as well as of all precedent. It was the acceptance of a title from a foreign state, and his resignation of the office afterward does not excuse him. In the early part of the session I offered a resolution calling for information on this subject; which went to the Committee on Foreign Affairs, and there it sleeps, under the usual narcotic.

WHAT IS ENGLISH SOCIETY?

And what is this English society, anyhow, that we should fall down and worship it? Shall I call your attention to the picture of it drawn a few days since in this House by the gentleman from Pennsylvania [Mr. KELLEY]? Rather let me quote from an English periodical. The Saturday Review gives us the following description of a part of the people of England's proud metropolis:

In wide and comparatively airy streets, such as Oxford street, you occasionally see a very narrow alley. Follow it, and you find it getting darker and narrower, till you reach a "court," where black, broken windows, mended with old hats, look out on the pavement, strewn and piled with sewage and refuse. The staircases which lead from swarming flat to flat in the houses are slimy, rotten, and full of treacherous holes. The plaster has fallen from the walls, and rats are noisy behind the dropping mortar and dirty laths. The vermin, the filth, are things that it would sicken M. Zola to describe. The very roofs are shambles of dead birds and cats. * * * Every room in these rotten tenements contains a family—often two.

In one cellar, a father, mother, three children, and four pigs have herded together in filth which would have disgusted a cave-man. And this family, with their four pigs, must have been comparatively capitalists. Probably they could have afforded to live in a more human way, if they ever had enjoyed the view of what a human way of living is. The enormous families of these people on the verge of pauperism constitute in themselves a difficulty in the matter of lodging them. The children are turned into the street till long after midnight, because the room in which their mother lives is a brothel; and the wretched little creatures themselves are ruined before they know good from evil. These miserable *cagots*, these moral lepers, are then forced into the society of decent people's children at school; and thus one highly profligate court may corrupt a large district, and spread everywhere the knowledge of scarcely imaginable crimes.

Do you tell me that this is a description of the lower orders of English society? Well, what of the higher orders? I turn to the pages of Charles Dickens, who in his Child's History of England gives us the following description of the English court, the highest type of English society, in the time of Charles the Second. He says:

The whole court was a great flaunting crowd of debauched men and shameless women, and Catharine's merry husband insulted and outraged her in every public way until she consented to receive those worthless creatures as her very good friends and to degrade herself by their companionship.

I have just been reading in regard to the lower end of English society. This is the upper end. Mr. Dickens continues:

A Mrs. Palmer, whom the king made Lady Castlemaine and afterward Duchess of Cleveland, was one of the most powerful of the bad women about the court and had great influence with the king nearly all through his reign. Another merry lady named Moll Davies, a dancer at the theater, was afterward her rival. So was Nell Gwynn, first an orange girl and then an actress. The first Duke of St. Albans was this orange girl's child. In like manner the son of a merry waiting lady whom the king created Duchess of Portsmouth became the Duke of Richmond.

Shall I, for the sake of disenchanting the American people of the witchery and glamour in which English society wraps itself, quote from the pages of Mrs. Jamison's Beauties of the Court of Charles the Second? Shall I quote the disgraceful scenes of Lord Hervey's picture of the court of George the Second, or describe the shameless creatures such as Walmoden, that controlled it? Shall I read from Thackeray's lectures on the four Georges, or from any truthful history in which may be found the details of the depravity of the matchless iniquity called the court of England?

It is from these loathsome creatures and this state of society that the present aristocracy of England is sprung. The lords and dukes and princes that our dudes and dudesses so long to worship are the profligate offspring of this profligate court; nor is there any superiority of the present over former days. The soiled doves of this cote are now fluttering in American society, and our brainless snobs seem happy if they are allowed to bask in the sunshine of the cast-off ornaments of this effete iniquity. The profligate from all lands, some wandering around without husbands and others with children who have no fathers, are dictating laws and costumes to what calls itself American society. And in this disgraceful worship of European depravity we seem to have lost all respect for common decency and American womanhood.

This is the filthy debauchery and crime, the ineffable state of degradation of which the higher and the lower circles of English society consist. Yet we are longing to get there so that we may enjoy garters and orders and ribbons and decorations.

I would have been glad, if my friend from Missouri had not so untimely cut me off [laughter], to show up the whole of this aristocratic craze.

IMPUDENT THREATS.

Why, sir, here on this floor within a day or two I have been threatened by a leading member of a principal committee of this House that if I did not allow a decoration of a royal and imperial order to be given to some one I should obtain nothing that may be asked in behalf of the city of Brooklyn, which I in part represent here; that he would oppose everything for the benefit of my city if I did not consent to violate the oath which I have solemnly taken to support the Constitution, which says that no order of nobility shall be conferred within the United States even with the consent of Congress.

OLD TIMES.

It bodes no good to our Republic to see this spread of anglomania. I recall the fact that when George Washington compelled the English

to evacuate Boston on St. Patrick's Day in 1776, and their friends, including the ancestors of James Russell Lowell, to follow them, he expressed the regret that these American toadies of England had not the decency to commit suicide. I recall the fact that hatred of England was the test of Americanism. I recall the fact that in the powerful body of the Presbyterian Church during the Revolution no man could be allowed to have a license to preach in that ministry who was even suspected of having a kindly feeling to England. I recall the fact that down through all the line of illustrious statesmen, from Jefferson to Clay, love of Ireland and hatred of England was the test of pure Americanism. I remember that in the better days of the Republic no officer would degrade himself by accepting any present or gift from any despot.

DECORATED EXPECTANTS.

But, oh, what a change! There are now pending before this House applications from a dozen or a score of American officers, including the living and the dead, for leave to accept titles of nobility from foreign despots. How sudden and widespread is this rot in American manhood! A rear-admiral of our Navy, without consent of Congress, has virtually accepted a gold medal, now at the State Department, from the King of Sweden for his conduct at the bombardment of Alexandria, and has no notion that we shall exercise our judgment upon its acceptance except to ratify it. The same officer has also accepted the thanks of the British Government for his conduct in "affording such kindly assistance to the British sailors and marines" on that disgraceful occasion.

Think of it, oh, American statesmen! of an American admiral being an assistant English marine. I wish we could tell it only to the marines. Another admiral has before Congress an application for leave to accept a sword and a Persian carpet from the Sultan of Zanzibar, presentation to be made after the custom of Oriental princes. Think of it! a carpet and a sword for our carpet knight. Another American admiral is before us for leave to receive a gold box with the emperor's portrait set in diamonds, from a despot whose subjects in Siberia and elsewhere are trying to reach the public with their side of the story written in blood. And this is practically accepted and only waiting transportation to the United States, with no thought that Congress will dare to disobey orders from the quarter-deck.

Another, a captain in the United States Navy, has now at the State Department a decoration of Knight Commander of the Royal Order of Kamehameha, asking leave from Congress to accept a title of nobility which even Congress has not the power to grant. And such a decoration! Not worth in the world's market a string of Wethersfield onions! Another American captain asking us for leave to accept the decoration of Knight Commander of the Royal Order of Kalakaua from the King of the Hawaiian Islands, and another from an American lieutenant for leave to accept a decoration of Knight Companion of the Royal Order of the Crown, from the same monarch. I believe Claus Spreckles is practically king of these islands; would not a barrel of his sugar or a keg of his molasses be of more value and sweeter to these American officers than all the decorations at the disposal of the nominal king?

An American commander, a lieutenant-commander, and a lieutenant are before us for leave to accept a decoration of the Order of El Busto from the Government of Venezuela, which has so grossly insulted the United States in the unavenged imprisonment and torture of John C. Wheelock, of my own district in Brooklyn. An American admiral, a captain, two lieutenants, and an ensign are asking us for leave to accept decorations of the Order of El Busto from the same Venezuela. Another American lieutenant is asking us for leave to accept the decoration of the Royal and Imperial Order of Francis Joseph, tendered by the Emperor of Austria. Indeed, unless we protract our session to a late day we might as well give up the entire session to the consideration of bills and resolutions for thanking tyrants and despots and accepting their royal and imperial orders. Now, all this would be very ridiculous were it not so sad a record of American snobbery.

One of the most

MELANCHOLY EXHIBITIONS

of a monarchical tendency among our citizens and officers, civil and military, is this scramble after presents and decorations from foreign rulers and despots. The framers of our Constitution clearly foresaw and wisely provided against the practice which has now become a crying evil. In the eighth clause of the ninth section of the first article of the Constitution it is provided as follows:

> No title of nobility shall be granted by the United States; and no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept of any present, emolument, office, or title, of any kind whatever, from any king, prince, or foreign state.

No title of nobility can be granted or conferred, even with the consent of Congress, and no present of any kind whatever, even a rose-bud or a piece of bread, without the consent of Congress.

Under the old Articles of Confederation the acceptance of these presents was forbidden absolutely, and no power was given to Congress to permit it.

CONGRESSIONAL CONDEMNATION.

Among the earliest cases of this kind brought before Congress after the adoption of the Constitution was that of Thomas Pinckney, of South Carolina. When this distinguished statesman had concluded his celebrated treaty with Spain the king of that country requested him to accept of certain presents, and when leaving the court of England, to which he had also been accredited, similar presents were tendered to him, to both of which offers he replied that without the consent of Congress he could not accept them, but that he would ask that consent in due time. On his return to the United States he was elected a member of Congress, and on the 26th of April, 1798, he laid before the House a request for leave to accept these presents.

If ever such a request could come before Congress with an overwhelming demand for its adoption this was the case. A great Revolutionary statesman, the candidate of a great party for the Presidency against John Adams, had negotiated an important treaty for which the thanks of both these great powers were due to him. He was a distinguished member on this floor, and common courtesy even seemed to forbid any member to oppose his request.

On the motion of Mr. Rutledge, of South Carolina, it was referred to a select committee.

The same day a similar request had been presented to the Senate, and that distinguished body had given its consent to the acceptance, not, however, without opposition from the illustrious Marshall, who, with Senators Brown, Langdon, Mason, and Tazewell, voted in the negative.

On the 2d of May, 1798, it was received in the House from the Senate. On the 3d of May that patriotic old Republican, Nathaniel Macon, of North Carolina, had it referred to the Committee of the Whole, where on the 4th it was considered. Mr. Bayard, of Delaware, was in favor of concurring with the Senate. Mr. McDowell, of North Carolina, opposed it. He wanted to put a stop to this business, as I want to do here to-day. He believed it to be a bad practice, as I believe it to be. W. C. C. Claiborne, of Tennessee, opposed it. He believed the Constitution intended to lock up every door to foreign influence, to the influence of courts and monarchies, which could not but prove baneful to every free country. He was afraid that if leave was granted to receive a present a precedent would be established which he apprehended would at a future day bring the question before Congress whether leave should be given for a citizen of this country to receive a title from a foreign monarch, and thus the folly and vices of European courts would be brought up for discussion before the Congress of the United States. (That very question is now before us in the case of Lieutenant Reynolds.)

Mr. Claiborne had no doubt characters might be found who would desire such a distinction, and others who would advocate the granting of it. (Shade of Claiborne, how I wish I could recall your voice in this debate!) Mr. Claiborne thought if the House voted against this proposition no future application would ever be made. (How much he was mistaken is seen from the fact that notwithstanding the motion was rejected by this patriotic Congress of our fathers, we have now fifteen or twenty applications for leave to accept these disgraceful presents.)

Mr. Macon hoped the custom of receiving presents from foreign governments by our officers would by the vote on this question be stopped forever. Mr. Claiborne again took the floor and said that if any discussion should in the future arise about the acceptance of any title from any foreign monarch it would disgrace the country in the eyes of every enlightened citizen. Mr. Thatcher was in favor of granting permission to receive this present, but if any citizen in the future applied for leave to accept a title (such as is proposed to bestow on Lieutenant Reynolds) he would make himself and his posterity forever ridiculous. Mr. R. Williams hoped that as this was the first application ever made to Congress it would be voted down and put a stop forever to such applications.

Mr. Lyon, the indomitable Irish republican from Vermont, said he would not be willing to lay this country under obligations to any foreign country. For Congress to authorize any such thing was a shameful business. The illustrious patriot, Albert Gallatin, closed the debate, and was opposed to allowing Mr. Pinckney to receive the presents. The vote in the Committee of the Whole was 44 to 38 against the acceptance. The yeas and nays were taken in the House, and there were 49 to 37 against allowing Mr. Pinckney to accept the presents. Among those voting against accepting the presents were both the Claibornes, William Findley, Albert Gallatin, Carter B. Harrison, Matthew Lyon, Matthew Locke, Nathaniel Macon, Blair McClenachan, Joseph McDowell, John Milledge, Thomas Sumter, Philip Van Cortlandt, Joseph B. Varnum, and Abraham Venable. And so the resolution was voted down, and it was hoped that a stop forever was put to such applications to Congress.

But this was not all. On the 21st of May, 1798, Mr. Bayard, of Delaware, who had been in favor of granting leave to accept these presents, said that the majority claimed to have established an invariable rule precluding the acceptance of these presents, which no merit hereafter should induce the House to depart from. He offered a resolution declaring that their votes against granting leave to accept these presents were from motives of general policy, and not through want of respect to Mr. Pinckney; and Mr. Pinckney himself made a speech acquiescing in the policy of opposition to the reception of gifts from foreign powers, but seemed to think that it might be looked upon as a personal opposition to himself.

MR. RUSH AND DECORATIONS.

When that brutal old tyrant George the Third was called home and his profligate son was crowned king in his stead, on the 19th of July, 1819, Sir Robert Chester waited upon our minister to England, Mr. Richard Rush, and offered him a gold medal with a bust of the new king on one side and several emblematical representations on the other, including Britannia with Neptune's trident. Mr. Rush of course declined it, when Sir Robert politely insinuated that surely the American Constitution would not preclude the ladies, and he tendered the bauble to Mrs. Rush, but the minister informed the courtier that she would not accept what he refused, and the souvenir went back to the sovereign. But now, alas, the change!

OUR ANGLIFIED FLUNKIES

refuse nothing tendered. They would probably receive a kick as a compliment if it came from a king. They are all agape for it. I remember my younger days in the woods when a nest full of young birds heard the rustle of the leaves made by the approach of the mother that all their callow necks were stretched and all their mouths open to their utmost tension to receive whatever was dropped into them. So it is with a certain kind of Americans, wherever a tyrant is crowned or an opportunity offered for the display of their subserviency, they are stretching their necks and opening their hands, if not their mouths, for whatever royal dirt may be flung into them. They are out in the snows of Russia, amid the volcanoes of the Pacific, and down to the antipodes, dipping our flag to every despot, hoping that their servility may be rewarded by some present or ribbon or decoration. Whither has American manhood gone?

In answer to my resolution calling upon the Secretary of the Navy for information whether any officer of the Navy had received or accepted any gift or present from any king, prince, or foreign state, this House was informed under date of January 25, 1884 (Executive Document No. 66), that no officer had accepted but several had received decorations and presents. A list is given of some seventeen naval officers now waiting with their bills before Congress for leave to accept these presents and orders and decorations. I think for the first three-quarters of a century there was only one application for such leave, and that was rejected by our early patriots.

ENSIGN REYNOLDS.

This last case of Ensign Reynolds I consider the most objectionable of all, for it is an open, glaring attempt to confer a title of nobility; and yet I understand it is unanimously recommended by the standing Committee on Naval Affairs of this House. That committee is composed of seven Democrats, not one of whom could have been elected without the vote of those whom the United States compelled to forswear all respect for royalty before they were admitted to citizenship, and four Republicans somewhat similarly situated. The chairman of that committee [Mr. COX, of New York], on the 25th of February last reported in favor of the joint resolution allowing him to accept this title of nobility and asking for its immediate passage, but by objections from my friends from Illinois [Mr. FINERTY], Iowa [Mr. WELLER], Pennsylvania [Mr. BRUMM], and myself, we have hitherto averted the degradation.

In the report prepared by the committee there is published a letter from the Baron Ignatz Von Schaeffer, envoy extraordinary and minister plenipotentiary from Austria-Hungary to Washington, in which he uncovers the conspiracy so long working in this case to violate the Constitution of the United States. Mr. Schaeffer says, under date Washington, June 20, 1882: The case was first brought before the imperial royal ministry of commerce. A cabinet council passed a resolution subject to his majesty's approval to confer the title of nobility of the Imperial and Royal Order of Francis Joseph. Then the imperial and royal foreign office instructed their minister here to ascertain whether Lieutenant Reynolds would be allowed "to accept that position." We are told that this proffered honor is only a medal. Did anybody ever hear of a medal being called a "position?"

Then "preliminary, confidential, and verbal application" was made to Secretary Hunt—who is now, though dead, on the Calendar of this House for leave to accept a decoration from the Emperor of Russia on his own account—then Secretary of the Navy, to ascertain whether Congress would be likely to consent to the acceptance. All the time these royal conspirators seemed very much in doubt whether the people of the United States would allow their representatives to violate their Constitution to pander to the vanity which this royal family seemed to entertain that they could convert our democracy to their ways, and then it was announced that the Navy Department would consent that Lieutenant Reynolds should be made a "knight of the imperial and royal order aforesaid;" and so if we pass this resolution we shall take part in knighting Sir Lovell K. Reynolds! Now, if this be not conferring an order of nobility, what is it? What is a knight?

I grant it is not a very high order of nobility, but it will do to commence with a Democratic-Republican Congress and an ensign. It is not a medal, as it advocates fondly hope to deceive us into believing. It is, on the authority of the Austrian minister, "knighthood." Worcester, in his dictionary, says a knight "is a man on whom the sovereign of England or his lieutenant has conferred the distinction of being addressed by the style of 'Sir' before his Christian name." So if we pass this resolution we must address the young ensign as "Sir Lovell." Won't that be lovely! and Secretary Chandler will take such delight in seeing him so printed in the Navy Register! Worcester defines knighthood as the state or dignity of a knight. Ben Jonson, in one of his poems, asks:

> Is this the Sir who, some waste wife to win,
> A knighthood bought to go a wooing in?

"A knight of the post" is said to be "a suborned rogue, or witness, as it were; a knight dubbed at the whipping post or pillory." And then there be knights-errant, plumed knights, and God knows what.

Oh! may the curse of God rest upon all those who plot to fritter away our American manhood in such degrading nonsense.

HONOR THE BRAVE.

Now, I shall not allow myself to be misunderstood in my action toward this young ensign. I know many of his friends. I know his honored father, and everything I know of him is good, except perhaps a little too much partiality for decoration. He is a gallant young officer and an honor to the American Navy, the record of which has been so honorable and gallant and brave, as recorded in the heroic lives of Barry, Porter, Rodgers, Decatur, Perry, Macdonough, Blakely, and Stewart (all Irish, by the way), and still exemplified in the present day by the names of Porter, Rowan, Worden, and Rodgers, and others of lower rank whom I might mention. Young Reynolds deserves all the honors which you can bestow upon him, and I have said repeatedly that I shall gladly vote for any resolution that may be introduced to give him the thanks of Congress or to advance him in rank even to rear-admiral. But I can not see that he has more claims upon the American people and their Congress than Mr. Pinckney.

Now, the report of this committee shows that young Reynolds, for his gallant conduct, has had a gold medal presented to him by act of Congress, through John Sherman, Secretary of the Treasury. He has had a gold medal presented to him through Royal Phelps, vice-president of the Life-Saving Benevolent Association, of New York. He has had a gold medal presented to him, through Charles D. Homans, from the Humane Society of Massachusetts, and he has had the approbation and thanks of the American Government through its various Departments. The American officer who has received all these American honors, and yet craves, through a false appetite, a degrading decoration from a foreign despot, would, after a bountiful dinner at Welcker's or Chamberlin's, sit down on the side-walk and enjoy a pint of peanuts!

I can not believe this of my gallant and intrepid young friend of the Navy. This foreign bauble is not an honor, but a disgrace, and it is from this disgrace I would save him. After describing his heroic conduct in all the flattering phrases of those who would ask for this decoration, I would repeat them all, and then on their account I would protest against the dishonor of turning his back upon the honor of his own country to seek doubtful praise from the minions of kings, emperors, and despots.

THE CONSTITUTION THREATENED.

I would he were here that I might appeal to him for a more heroic act than the rescue of eleven persons from the wreck of the Olivo. I would appeal to his heroic instincts, and say, "Here is the Constitution of the United States in danger. The billows of monarchical dangers surround it. The waves of despotism are surging over its deck and threatening to devour it. You can rescue it." In the bark Olivo there were eleven men in danger. There are eleven members of the Naval Committee of this House who have foolishly risked the bark of our Constitution amid the angry billows. I see my young friend eager to save the wrecked crew. Gallantly done! You have saved eight of them, but three still remain. I see them waving signals of distress, and I recognize them as my old friends SAMUEL S. COX, LEOPOLD MORSE, and J. FREDERICK C. TALBOTT. Fling yourself once more into the very jaws of danger and rescue them, for they are still worth saving. But to do this you must abandon your claim for foreign decorations, and in that way you can save the imperiled Constitution. Do this and receive the thanks of a democratic-republican people whose approbation is worth more than all the baubles which kings and emperors can present you.

HONORS THAT DEGRADE.

But the foolish friends of our gallant young ensign can not get it through their dull brains that there is no honor for a republican officer in the praise or presents of kings. On the contrary, it is a degradation: and it is to save him from that degradation that I protest. He has saved a dozen of Austrian lives. I think there is living in the district represented by the chairman of the Naval Committee [Mr. COX] a naturalized citizen by the name of Samuel Sullivan Cox who has saved more American lives than our ensign saved of Austrians, done it as bravely, too, with as much risk and intrepidity. Why should not he have a right to a day in Congress as well as this young ensign? You give this Policeman Cox his choice whether he will have Congress vote him its thanks directly or ask permission to receive medals from a foreign power, and like a sensible American republican he would prefer the thanks of his own country.

BRAVE FIREMEN.

How many gallant firemen in Brooklyn, New York, and elsewhere have plunged into the surging waves of fire a thousand times more terrific than the billows that beat around the Azores. Blinded with smoke, stifled with steam, scorched by flame and fire, you have seen these heroic men emerge from the seething vortex with a child and perhaps its mother in their noble arms from upper windows and falling timbers and scorching flames. What is a leap into the sea compared with this? Yet where has Congress devoted an hour to their honor? If we magnify the achievement of this young hero for saving life by arresting public business to play second fiddle to some European despot in honoring our own officers, why not devote as much time to every hero who saves a life from the water or rescues women and children from the flame?

Why prefer Ensign Reynolds to Policeman Cox when even in number the policeman is three or four ahead; or do you mean to have it understood that the only way for American heroes to get mentioned in an American Congress is through the back door of some foreign court? I demand direct entry for them, and if we are going into this business let every gallant American citizen have the thanks of Congress without foreign aid. To be sure this would occupy our entire time, but if we are going into the business let us be impartial.

WHAT IS A DUDE?

I denounce this entire business as disgraceful and calculated to make dudes of our young officers. Do not evade the issue by trying to rouse indignation against calling our officers dudes. What is a decorated ensign if not a dude? Get a young officer with a leaning toward aristocratic ways and pin upon his garment a decoration of Knight Commander of the Royal Order of Kamehameha and a ribbon of the Order of King Kalakaua and a decoration of El Busto and a knighthood of the Royal and Imperial Order of Francis Joseph, and if you do not have a dude, "what is it?"

I understand that this Naval Committee have got an order of the House appointing May 24 for naval business, chiefly to carry through this aristocratic idea of dubbing one of our gallant young ensigns as "Sir Knight." That is the English Queen's birthday, and very appropriate for the business; crowd it through; refuse the yeas and nays to hide your conduct from your constituents; reverse the solemn decision of your early Congress; spurn the sentiments of Albert Gallatin, Nathaniel Macon, and Thomas Jefferson, and then drive home in your liveried coaches to your sumptuous dinners, and sing "God save the Queen" for the remainder of the evening!

NOT DEALING WITH THE IRISH.

The Washington National Republican published an interview with the British minister in this city concerning American interference in the fate of O'Donnell, the executioner of Cary, in which he is represented as saying:

It is fortunate, however, that I am dealing with the American Republic and not with the Irish people of this country.

I shall not stop to question the good taste of this foreign spy in such an attempt to discriminate between the Irish people of this country and the American Republic, when he, if not utterly ignorant, must have known that the Admiral and Vice-Admiral of our Navy, the Lieutenant-General of the Army, a majority of the Senators and Representatives in Congress, and the President of the United States are a part of the "Irish people of this country;" but I give him credit for wisdom when he informs us that it was fortunate that he was not dealing with the Irish people of this country. It was always very unfortunate for England to be dealing with the Irish people of the United States. It was unfortunate for England that she had to deal with the Irish when General Montgomery, of the county Donegal, took Montreal and moved upon Quebec. It was unfortunate for England when she was dealing with the Irish General Stark at Bennington; with the Irish General Wayne at Stony Point; with the Irish General Daniel Morgan, of Ballinascreen, at the Cowpens; with the Irish General Sullivan at Trenton and Princeton; with the Irish General Knox at the head of our artillery in all the battlefields where Washington commanded; with the Irish Generals Irvine of Enniskillen, Butler, Hand, Moylan of Cork, Ramsay, and numerous others on all the battlefields of the Revolution.

It was unfortunate for England when she was dealing with that gallant Irish commodore, Decatur, when he compelled the English man-of-war Macedonian to strike her colors to the starry flag. It was also unfortunate for her when she had to deal with those other Irish commodores, Perry on Lake Erie, Macdonough on Champlain, and Porter and Johnston Blakely on the ocean; and it was unfortunate for England when that other Irish commodore, Charles Stewart, grandfather of our own Charles Stewart Parnell, tore down the English flag from two ships-of-war in his midnight fight at sea.

It was unfortunate for England when her insolent soldiery hoped to annihilate us as a nation in the second war, leaving us no more a home and a country, taking this capital, sacking this Capitol, burning the Congressional Library, and pursuing the wife of our President as she fled from the White House with Washington's portrait in her possession to save it from English fury and insult. It was, I say, as unfortunate for England as it was fortunate for the United States that she had to deal with that Irish general, Andrew Jackson, of Carrickfergus, who met and conquered her cohorts at New Orleans. No wonder that English snobs do not admire the Irish element of America. We thank them for their abuse. I join with Mr. West in saying that it has never been very fortunate for England when dealing with the Irish people of the United States.

A FAIR SWAP.

I do not suppose any one will accuse me of partiality to the British minister here. I have never met him, and never may. His family, which I believe is connected with the Irish and is Catholic, has been renowned for the manly character of its men and the charming witchery of its women. If it be not Irish it has the honor to embrace by marriage within its circle an Irish lady the most beautiful woman of the present day. But however opposed to him in his ways and views, I much prefer him to Mr. Lowell, and I think it would be an improvement all around if he and Mr. Lowell would swap places—we sending Mr. West as our representative to the Court of St. James and receiving Mr. Lowell as the minister of England. That would be according to the eternal fitness of things. I really think Mr. Lowell is to-day more of an Englishman than Mr. West, and Mr. West could not possibly have so utterly failed in protecting our citizens abroad as Mr. Lowell has done.

There is still a better plan for improving our diplomatic service at the British court. In the correspondence published concerning the imprisonment of our citizens by England there appeared a letter addressed to Mr. Lowell by the wife of one of these prisoners, Mrs. Daniel McSweeny, of California, and in that single letter there is more true American statesmanship displayed than in all the letters of Mr. Lowell, and I propose that it would at once be an improvement in the service and a proper step in the progress of women's rights to have Mr. Lowell recalled and Mrs. McSweeny appointed in his place.

If Mr. Lowell be not returned to us as the British minister England will make a great mistake. To all persons coming from the British dominions to get the right to vote here we administer an oath renouncing allegiance. We can imagine an Irish peasant coming in the steerage of the same ship in whose cabin Mr. Lowell will return. Which should we compel—the cabin or the steerage passenger—to renounce love for England? Very few of our ministers abroad should be allowed to vote without taking the oath of naturalization on their return.

WHO SHALL BE PRESIDENT.

In this day of gloom and degradation where shall we look for succor? A Presidential election is approaching and we are looking for some one who will restore to us the principles of Jefferson and Jackson. We want a candidate who is poor and would rally the sons of toil and labor and poverty around him. We want a statesman whose hands are clean and his heart set like steel against plunder and jobbery and snobbery, who is truly American through and through, and opposed to all encroachments of monarchy and aristocracy and favorable to the perpetuation of American democratic-republican simplicity. I see but one man to fill the bill. I believe his simple, honest name would give more strength to our ticket than countless millions of dollars. I do not believe that the American people are so far degraded that their votes can be to any great extent influenced by money. I believe that honesty is still more fascinating in the eyes of American voters than the glitter of gold. If God would only put it into the hearts of our convention at Chicago to nominate him our victory would be already secured.

In his election a new era would open upon our country. No power on earth would dare to trample on the rights of our citizens or insult our flag. Honesty, economy, and purity would surround our Treasury. The aristocracy and snobbery that are now masquerading in foreign and domestic circles would vanish before American manhood and democratic simplicity. The foolish attempts to ape court circles would be frozen out of metropolitan society, and the White House would become the center of old-fashioned American manhood and womanhood, where refinement without snobbery, beauty without vanity, and statesmanship without ostentation would restore to us the fast fading splendor of American character.

A HAND-BOOK WANTED.

Would it not be well for some American publisher to get up a hand-book for the edification and cure of these Anglo-American snobs. The book should embrace the Declaration of Independence enumerating the wrongs inflicted by England on the American people. The address of the American Congress to the people of Ireland, showing that our patriotic forefathers looked upon the Irish as friends and the English as enemies; the report of John C. Calhoun in favor of war with England in 1812, recounting the persistent hostility of England to the young Republic; the "Star Spangled Banner" inquiring about the English:

> Where is that band that so ruthlessly swore
> 'Mid the terror of war and the battle's confusion
> A home and a country they'd leave us no more,
> Their blood has washed out their foul footsteps' pollution.

Extracts from Horace Greeley's writings on the Irish uprising of 1848; James Russell Lowell's Biglow Papers, particularly the scathing abuse which he has so lavishly heaped upon England for her hypocritical and treacherous conduct toward us during the late war; extracts from speeches in Congress on the tariff question and extracts from our diplo-

matic correspondence during the late war—all this would furnish healthy and homely reading for the miserable dudes who are trying to glorify England and degrade Ireland, and crushing each other in their eagerness to get among the front ranks of those who glory in kneeling in English mud.

A CHANCE TO GET EVEN.

I see in the future some chance for revenge on these toadies of England. In case of a war with that country, which is not at all unlikely from her jealousy, injustice, and overbearing insolence to the United States, it would be amusing to watch the conduct of the editors of the New York Times and Tribune and the readers of those papers who have been weaned from the doctrines of their founders. They would, of course, take part with England as far as safety to their treasonable conduct would permit, or if they did not openly join the British forces, would look for substitutes among the Irish, who have always proved loyal to their adopted country. As for their miserable crowd, they would never strike a blow for their country.

NO PRESENTS FROM KINGS.

Our far-seeing Revolutionary fathers when they threw off the chains of monarchs dreaded that the time might come when their children might degenerate, forgetting the hardships through which their liberties were achieved, indulging in the degeneracy of manhood which wealth and fashion are sure to bring and flattered with the blandishments of monarchs and despots which dazzle and bewitch heads not blessed with much abundance of brains, and took pains to insert in our Constitution the provision that—

No person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state.

Here it will be seen that no officer, President or subordinate, shall accept either for himself or others or for the people of the United States any gift from any king or foreign state. By a special message from the President we are informed that without such consent of Congress he has accepted such a gift. I quote from the official document of the 21st ultimo:

The President sends his cordial thanks for the opportune gift of this vessel—

The Alert—

which he accepts in the name of the United States.

The Constitution says no such present shall be accepted. The President informs us that he has accepted, and in the language of a distinguished statesman of New York, "What are you going to do about it?" This Congress is requested to get on its knees and ratify this acceptance, made without our consent, in open violation of the plain provisions of the Constitution; and for one, having sworn to support the Constitution, I refuse to perjure myself.

Do you tell me that it would be ungracious for us not to accept and give thanks for such a valuable and desirable present? I answer such a fool by saying that the Constitution was expressly made to prevent our acceptance of any presents, and the more valuable and desirable the present the more binding is the constitutional prohibition against its acceptance.

But this official document informs us that our Government has not only accepted this unconstitutional present, but that it went begging for it. The Secretary of State tells us that information of the wish of this Government had informally reached the British admiralty, and the rest was appropriately left to that most obsequious servant of British royalty, Mr. Lowell, to manage the mode of bringing us to our knees before the throne.

But in my case there is another reason why I can not vote for this resolution, because it is a part of a system cunningly planned to bring back this country to the allegiance of England. Our wise forefathers provided that all natives of England, Ireland, Scotland, and all other countries in subjection to the British Crown seeking to become citizens of the United States should first swear against the queen. Nearly fifty years ago I appeared in one of your courts and asked leave to declare my intention to become a citizen of your grand Republic. I remember the awe with which I heard your officer administer to me the oath which I had again to take on becoming a citizen, in these words:

You do solemnly forswear all allegiance to all kings, princes, and potentates whatsoever, and particularly to the Queen of Great Britain and Ireland, so help you God.

That oath and that protest, with God's help, I have kept and will keep, and you can never compel me to become a perjurer by shouting "God save the Queen!" or kneeling in thanks to any royal head for deceptive favors. Nor can you get any other naturalized citizen who is a member of this House to indulge in praise or thanks of any foreign government without giving cause to suspect his sincerity in renouncing his allegiance as you would suspect the sincerity of a reformed drunkard whom you found every morning smelling the neck or kissing the cork of the forsworn bottle.

It was therefore, when the gentleman from New York [Mr. COX] on the 26th day of February, 1884, offered the following resolution, which had passed the Senate the same day, that I objected:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the act of Her Britannic Majesty's Government in presenting to the United States the Arctic steamship Alert, which will be used in the contemplated expedition to relieve Lieutenant Greely and his party, is recognized as opportune and generous, and is deeply appreciated by the people of the United States. That the President be, and he is hereby, requested to communicate a copy of this resolution to Her Majesty's Government.

The following is from the official record of the House:

Mr. COX, of New York. Mr. Speaker, it would be an act of grace if we take from the Speaker's table the Senate resolution accepting the gift of the Alert from the British Government and pass it instantaneously.

Mr. KASSON. There is no objection.

How prophetically spoken!

The SPEAKER. The joint resolution will be read, after which the Chair will ask for objections.

The joint resolution of the Senate was read at length.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. ROBINSON, of New York. I object.

It so happened that the gentleman from Illinois [Mr. FINERTY] who, with me, had previously objected to the introduction of this matter in a different shape, had been called out, and I was just coming in when the objection was called, and there the resolution has been hung up ever since the 26th of February last, and shall be as long as my objection can prevent its passage. Can I not answer for others?

TIMEO DANAOS ET DONA FERENTES.

It is an unnecessary display of servility. When the United States presented the Resolute, rescued from the sea, to the British Government under circumstances more worthy of thanks, the British Parliament took no notice of it. The President has already thanked England quite as much as the occasion requires, and the anglomaniacs should not be allowed to genuflect more deeply in monarchical mud if we can prevent them. The ship is worth nothing to us, requires great repairs, and American ship-builders in Maine had offered to build a better ship in quicker time than is required to put the Alert in condition.

It is worth noticing that this matter was referred to the House Committee on Foreign Affairs on the 21st of February, 1884, for the express purpose of having a House resolution on it, but that since then no report has been made. The objections have had some effect, and no one in the House now seems anxious to push this matter forward. We have already thanked the English enough. We bought two ships at more than their value and deprived American ship-builders of a job who stood ready to build us two good ships in less time and at no greater expense than we have paid for the old hulks they have palmed off upon us.

NO AFFAIR OF IRISH FEELING.

This is no affair of Irish feeling. It is a question of American honor. There is no necessity to say anything of Irish wrongs in this connection, yet I may plead against this call upon the American Congress to insult poor Ireland in her desolation. Every vote cast in favor of this resolution is an insult to Ireland which those who love her will resent. This is only one of the many devices of England to betray the American people into love for her and hatred of Ireland. Fifty-nine of the sixty millions of this American people hate the English Government and sympathize with Ireland. Ireland and her people to-day fret restlessly beneath the accursed government which America threw off. It takes 50,000 of a foreign garrison to hold her down with bayonets, and yet with all their power they have not yet subdued and never will conquer her. The clanking of her chain, only makes her more dear to every lover of freedom. The tyrants surround themselves with bayonets, but they are not secure. Every foot they set beyond their garrison is over danger. Every carpet-bag presents to their guilty and affrighted souls a mine of dynamite. Their doom is written. God will afflict them as He afflicted the Pharaohs till they let His people go, even if He has to leave the first born of every family in the embrace of death.

MY COURSE.

As for me, I stand by the record of my past life. There is no desire and no cause to change. It is now very nearly fifty years since I first stood up in this country to advocate American principles against monarchical and aristocratic ideas and to defend Ireland and her sons from the false charges preferred against them, in all the leading cities of the Union, before conventions and library associations and legislative bodies, with Presidents, governors, Senators, and Representatives in Congress among my auditors. I have served well if not always wisely, retaining among my papers letters of congratulation and praise from numerous distinguished clergymen and illustrious statesmen of all denominations and of all parties; sometimes praised above my deserts, at other times condemned most unjustly when I most deserved praise; but whether in praise or under condemnation, always loyal to the grand old country of my birth and the glorious land of my adoption; proud of their glory, jealous of their fame, and devoted to their honor. Seventy years have not chilled my devotion, and death alone can silence the throbbings of my heart for their prosperity and renown.

ADDENDA.

The Naval Committee had, by a special order of the House, the entire day of Saturday, May 24 (the Queen's birthday), to introduce such bills as they pleased for the consideration of the House. Measures of great importance were pending before that committee, one of which was a bill to provide for a market site on the navy-yard grounds for the city of Brooklyn. My colleague from Brooklyn [Mr. CAMPBELL] and myself felt happy that we had some chance to secure consideration

for this measure, so important to Brooklyn. But the very first bill the committee introduced was one to allow Ensign Reynolds to accept the "decoration of the Royal and Imperial Order of Francis Joseph, Emperor of Austria." I opposed it because, besides other reasons, I thought the bill for the benefit of Brooklyn was of more importance.

My conduct has been condemned, but not a word said against the committee for putting a bill to decorate an ensign ahead of all public business and throwing the Brooklyn market bill over for the session. I was berated chiefly because I had opposed a bill in Congress honoring our young ensign for gallantry in saving some Austrian lives, and Mr. KASSON, in his forcible-feeble manner, had proclaimed that any one refusing to honor such bravery was a disgrace to himself and a disgrace to his countrymen. In the spirit of our republican institutions, on the 9th of June, 1884, I introduced a bill honoring other and superior acts of gallantry in saving American lives from flood and flame by Brooklyn bravery—as all should stand equal.

This led to the pouring out upon my head such a flood of vituperation as has never been witnessed in former freshets in the United States. No murder or burglary in the last century has called forth such frantic execration. In my own city of Brooklyn it would seem that one-half of the people had got into fits over it. A correspondent of the Brooklyn Eagle interviewed two or three prominent citizens, among them my old friend Mr. Stranahan, who represented the entire city of Brooklyn some thirty years ago, and after recovering his breath he was able only twice to articulate "Poor old ROBINSON!" Well, "poor old Stranahan" did not say what "poor old ROBINSON" had done, but the impression was left that if I had assisted the Cannibal Islanders to eat a raw missionary my conduct could not have been more horrible and shocking. I wrote to the editor of the Eagle and asked him to publish the bill I had introduced and let his readers know just what I had done, but this he has refused to do. All the papers assailed my act, but not one of them had the manliness to publish my bill and let it speak for itself.

THE NEW YORK HERALD

seemed to be the most severe of my critics, but would not publish the fact that the worst feature of my crime was simply proposing to pay honor to some heroic firemen and others who had acted at least as gallantly as Ensign Reynolds in saving life; some of whom had been presented with the Bennett medal, delivered in one instance by the editor of the New York Sun, Mr. Dana. Every bit of my offense was before the editor, for I sent him a copy of the bill which was read by the clerk, without a single word from me. It is in print as a House bill, but has been studiously kept out of the press, and hitherto out of the RECORD, not one American editor having the common fairness to state the crime for which they so furiously assailed me. About two years ago I was groundlessly assailed by the Herald, and I wrote the editor a note stating what I had done, and the editor not only published my letter but manfully and honorably acknowledged that I was right and that I should not have been assailed. When will it do me similar justice in this case? I can afford to wait, for truth "will rise again."

TRIBUNE AND TIMES.

As to the howling of the Tribune and Times, I do not expect anything else from them. They have systematically belied and abused me and hid the truth from their readers. The Tribune lets no decent man escape from its blackguardism. I have just read in the Brooklyn Union of June 24 a paragraph from an article in the Tribune of 1875 in which it thus speaks of Senator LOGAN, its present candidate for Vice-President, in criticising one of his speeches in the Senate. The Tribune described him as a "spavined nightmare on the track of a beautiful dream," and adds:

Through two hours LOGAN swung his beautiful arms over the heads of the Senate like the booms of a Government derrick, while his chin churned the language like a pile-driver in a heavy sea, and the baffled reporters made wild plunges with their pencils to gather his regurgitations for the printer.

When this "organ of decency" uses such language about a distinguished gentleman of its own party, I may congratulate myself that I escaped so easily.

Now, then, to shame my maligners I publish my resolution word for word as read by the Clerk of the House, and shall try to have a copy put into the hands of all the voters in my district and take their verdict as to my crime and its punishment, and shall leave to the editors the charge of unfairness never before equaled in trying to excite popular indignation against one who has honestly attempted to do his duty and refusing to publish one line giving the truth in the case. Here it is from the official copy:

Joint resolution granting permission to Samuel Sullivan Cox, "Rat the Newsboy," C. J. Fitzgerald, Michael Quigley, Charles Shannon, John Brunskill, Robert Walsh, Timothy O'Brien, John Clancy, "Nan the Newsboy," John Hussey, Thomas McBride, Philip Bowers, Daniel J. Meagher, Patrick J. Lynch, Patrick Coyne, Oswald Morrisey, John Rooney, Robert Wright, Thomas Larkin, and Michael Commerford to accept the decoration of the thanks of Congress for heroic conduct in saving lives.

Whereas this Congress should know no distinction between a brave ensign and a heroic 'longshoreman, and should mark its approbation of saving American lives as well as the lives of Austrians, and should act from its own promptings rather than from the insolent dictation of foreign influences, against which our beloved first President so well and so wisely warned us; and

Whereas this Congress has passed a joint resolution enabling Lovell K. Reynolds, an ensign in our Navy, to become a knight of the Royal and Imperial Order of Francis Joseph, while the Constitution, which we have all sworn to support, expressly says "no title of nobility shall be granted by the United States;" and

Whereas this young American officer, by this act of Congress, is enabled to assume the title of "Sir Lovell K. Reynolds, knight of the Royal and Imperial Order of Francis Joseph," for his gallantry in saving Austrian lives, while numerous American citizens, 'longshoremen, boatmen, firemen, and life-savers, equally brave, who have saved larger numbers of American lives, have received no reward, nor even mention of their heroic names in Congressional records, and who have not sought and would not accept any reward for their bravery from foreign despots; and

Whereas this brave young officer did risk his life only upon one occasion, to save from the water some ten or twelve nameless foreigners belonging to a sinking bark at sea, for which he has received several medals from American societies and honorable mention in Congressional records, while numerous American heroes, male and female, equally brave, on many occasions and at greater risk to their own lives, in the scantily paid Life-Saving Service, in the Light-House Service, in the fire departments of Brooklyn, New York, and other large cities of the Union, and among the boatmen and 'longshoremen, without any pay, through angry waves of water, hissing streams of steam, and seething billows of fire, have saved hundreds of American lives, men, women, and children, not one of whom has ever had his or her name even mentioned in Congress; and

Whereas this is a curious, if not a disgraceful, fact, that in our centuried history only one person has been found worthy of Congressional record for personal bravery in saving life, while the gallant American seamen who manned this ensign's boat, at imminent and equal danger to their own lives, are not mentioned by name nor even referred to; and

Whereas the framers of the Constitution have expressed their disapprobation of our officers receiving gifts from foreign states, and have absolutely prohibited Congress from allowing by their vote any person to be decorated with any royal or imperial order, and Congress has, upon all occasions where discussion was allowed, rejected all applications, even from the most illustrious of our citizens, for permission to receive any gift from any foreign power, the great names of Gallatin, Macon, and other illustrious patriots being found on the yeas and nays in the negative on the bill to allow Thomas Pinckney, of South Carolina, who had borne a distinguished and heroic part in our Revolutionary struggle, who had but two years before received the votes of eleven States for President of the United States against John Adams, who had signalized his diplomacy abroad by the negotiation of a valuable and advantageous treaty, to receive a present from the Kings of Spain and England; and Congress had also rejected the application of Andrew Jackson for permission to receive a present from the Creek Nation, and had rejected the application of our consul at Tangier for leave to accept a lion and horses from the Emperor of Morocco; and President Jackson, in 1834, in a special message to Congress, stated that he had issued orders that no more presents should be received by any public officer; and this House, in the Forty-fourth Congress, on St. Patrick's Day, 1876, on the unanimous report of the Committee on Foreign Affairs, presented by the Hon. Mr. Faulkner, of West Virginia, unanimously rejected the application of our minister to Bogota for leave to accept a silver inkstand from the Queen of England; and for the first sixty-five years of our history Congress invariably rejected all applications of this kind, and still there are more applications to this Forty-eighth Congress for permission to receive these foreign baubles than there were for the first three quarters of our century as a nation; and

Whereas Samuel Sullivan Cox, of the city of New York, has, on different occasions, saved seventeen American lives, four or five more than Ensign Reynolds, and has never received mention in Congress; and

Whereas on the 30th day of July, 1871, the steamer Westfield, of the Staten Island Ferry, was blown up at the foot of Whitehall, in the city of New York, with two hundred and fifty persons on board, the majority of them women and children, and most of them crowded over the exploding boiler, when "Jim" Connors, known as "Rat the Newsboy," saved the lives of at least ten persons and aided in saving many more, dashing into the waves and diving among the struggling and drowning women and children, and buoying up the scalded victims on his brave little back, till the boatmen Quigley, Collins, Connors, and Breen took them into their boats, thus even in his tender years rivaling the bravery of our gallant ensign, for which Congress has as yet failed to recognize him, as stated in the New York Sun of August 2, 1871; and

Whereas on the said explosion of the Westfield C. J. Fitzgerald, a Whitehall boatman, leaped from his boat into the water and rescued two children, with their father and mother, and twelve other persons, at the imminent risk of his own life; and

Whereas on said explosion of the Westfield Michael Quigley, a Battery boatman, afterward a resident of Brooklyn, at 64 Degraw street, plunged into the waves, amid spars and splinters, enveloped in smoke and steam, and rescued eleven persons, two of them babes, for whom he dived beneath a raft; and

Whereas Charles Shannon, of Philadelphia, has within the last seventeen years saved one hundred and sixty-three persons from drowning, as certified by Hon. CHARLES O'NEILL, of Pennsylvania; and

Whereas Captain John Brunskill, of New York city, has at different times saved from drowning forty-three persons; and

Whereas Robert Walsh, a patrolman in the New York police force, saved four persons at different times from drowning; and

Whereas Timothy O'Brien rescued fifty persons from the wreck of the ill-fated Metropolis, in a violent sea and dangerous breakers; and

Whereas John Clancy, formerly a Buffalo boy, but now or lately in the employ of the Pennsylvania Company, foot of Desbrosses street, in the city of New York, did at different times save nine persons from drowning; and

Whereas William O'Neill, better known as "Nan the Newsboy," had, previous to September 28, 1878, saved eleven lives, and on that day jumped from the Harlem boat Sylvan Stream and saved three boys whose boat had capsized, as set forth in the New York World of September 29, 1878, and since then has saved many others; and

Whereas John Hussey, a 'longshoreman of New York, has in thirteen years saved eighteen lives, as set forth in the New York Sunday Democrat of May 5, 1878; and

Whereas Thomas McBride, of the municipal police force of the city of New York, in four years had saved the lives of eighteen persons, as stated by John Sherman, then Secretary of the Treasury, these heroic deliverances being effected by diving under the water for the half-drowned victims, at various seasons, sometimes in cold and darkness, involving terrific struggles and always performed regardless of privation and at great personal hazard, as set forth in the New York Sunday Democrat of May 12, 1878; and

Whereas Philip Bowers and Freeman Bowers, of East Newark, N. J., have within fifteen years rescued from drowning nearly two hundred persons, as set forth in the New York Sun of November 3, 1878; and

Whereas Daniel J. Meagher, foreman of Hook and Ladder Company No. 3 of the city of New York, did, at midnight on the 2d of May, 1878, at the fire on the upper floors of 28 East Broadway, rescue Sarah Freeman from the fourth floor, standing fifty-two feet from the level of the sidewalk, on the upper round of a ladder, from which he had to elevate his arms through fire and smoke to reach the object of his heroic daring, whom he rescued from imminent death at the fearful risk of his own life; and

Whereas Private Patrick J. Lynch, of Engine Company No. 11, at the fire in Cannon street, in the city of New York, November 14, 1879, did, at fearful per-

sonal risk and in serious injury to his person, rescue Lizzie Noble, a child of 10 years, and made brave efforts to rescue others from the devouring flames, as described in the New York Herald of November 19, 1879; and

Whereas Patrick Coyne, of O and Eighth streets, in the city of Boston, had from 1862 till 1878 saved Captain Tarbell and six men from the yacht Tornado, three boys from a capsized boat, two men from a wrecked boat, three men and two boys from drowning, four soldiers from a boat upset, two men from drowning, four men and two children from a swamped boat in a heavy sea, four men of the yacht Hebe, one man whose boat had upset, the crew of the bark M. J. Kiley, after an hour's struggle in the water, six persons from a swamped boat, and in several cases, at fearful risk, saved lives by stopping runaway horses, as set forth in the New York Sun of July 6, 1879; and

Whereas Oswald Morrisey, a lad of 12 years of age, attending the East Fifty-seventh street grammar school of the city of New York, did, on the 26th day of June, 1880, save from the fire at 964 Third avenue, New York, Henry Seib, aged 4 years, by rushing up five flights of stairs through volumes of smoke and tongues of flame, bringing down the child and placing it in the arms of its distracted mother, while his bare feet and arms and shoulders were fearfully scorched, as set forth in the New York Herald of June 27, 1880; and

Whereas Fireman John Rooney, at the terrible conflagration in Park Row, New York, saved from the flames, at the risk of his own life, Miss Ida L. Small, from an upper window enveloped in flames, and brought her down in safety, amid the cheers of thousands of spectators, as described in the New York Herald of May 23, 1882; and

Whereas the heroic firemen of Brooklyn, N. Y., have on many occasions exhibited extraordinary bravery in saving life from fearful fires, not one of whom has been mentioned in the proceedings of Congress, though more deserving than Ensign Reynolds; and

Whereas Charles Wright, the young colored bootblack, distinguished himself in saving life from the sea of flame that enveloped this Park Row building; and

Whereas Thomas Larkin, of Hook and Ladder Company No. 11 of New York, on the morning of July 26, 1880, seeing a woman at a window on the third story of the burning building No. 328 East Houston street, from which volumes of hot smoke and streams of fire issued, did rush into that smoke and fire and through that window rescue that woman, with her child, for whom she had gone back into the burning building, saving them from the most fearful death, as described in the New York Herald of July 27, 1880; and

Whereas Michael Commerford, of engine 39 of the city of New York did, on the 4th day of January, 1882, at the fire in Madison street, rescue from an upper room filled with smoke and flame the children of Margaret Egan, in an insensible condition, but whose lives were spared, for which gallant conduct he received the Bennett medal, presented by Charles A. Dana, of the New York Sun, with very complimentary remarks, as set forth in the Sun of July 21, 1882; and

Whereas all these cases are of at least equal merit, and some of them of superior claims in an American Congress, to that of Ensign Reynolds, and come to Congress free from the objection of foreign dictation: Therefore,

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the aforesaid Samuel Sullivan Cox, "Rat the Newsboy," C. J. Fitzgerald, Michael Quigley, Charles Shannon, John Brunskill, Robert Walsh, Timothy O'Brien, John Clancy, "Nan the Newsboy," John Hussey, Thomas McBride, Philip Bowers, Freeman Bowers, Daniel J. Meagher, Patrick J. Lynch, Patrick Coyne, Oswald Morrisey, John Rooney, "Wright the Bootblack," Thomas Larkin, and Michael Commerford be, and they are hereby, granted permission to accept the decoration of the thanks of the Congress of the United States, which are hereby tendered to them in recognition of their heroic conduct in saving the lives of so many American citizens from the waves of the sea and from billows of flame; and that any member of this House who refuses to give unanimous consent to the immediate passage of this joint resolution in honor of these gallant American heroes for "saving the lives of others repeatedly at the peril of their own is a disgrace to himself and a disgrace to his countrymen."

Now there is the whole truth about my action. Will any fair-minded man answer me whether my proposition is anything worse than the bill which almost unanimously passed the House last Queen's birthday? In order that the reader may compare the two acts and say which is more worthy of censure, here it is:

ENSIGN REYNOLDS'S BILL.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Ensign L. K. Reynolds, United States Navy, be, and he is hereby, granted permission to accept the decoration of the royal and imperial order of Francis Joseph, awarded him by the Austrian Government in recognition of heroic conduct in saving the lives of the crew of the Austrian bark Olivo, November 24, 1879.

Now compare the claims of Ensign Reynolds with those of Oswald Morrisey, above mentioned, for reward of heroism.

I suppose the difference between the cases is that Ensign Reynolds belongs to a family moving in aristocratic society here, and Oswald Morrisey was a poor barefooted boy in one of our New York public schools. And I must expect to get abused for imagining that Congress could stoop to recognize the heroism of the poor. I rather think, too, that my heroes have incurred the wrath of these English and snobbish scribblers because, from their names, they appear to be mostly Irish. They nevertheless have won and deserve the praise of our people and Congress quite as well as Ensign Reynolds.

It suits the prejudice of my assailants to represent me as a man with one idea. I might easily prove by the RECORD that no member of the House has spoken on a greater variety of subjects, and could prove from reference to my speeches by members of both sides of this House, as well as from the applause with which my speeches on American shipbuilding, penny postage, Jefferson's granddaughter, rights of American citizens, and on almost every prominent question were received, that I am the last man to be classed as a one-idea member.

But just at present the great effort of the English scribblers for the American press is to make the public believe that my course is unpopular, and an unmanly combination has been formed to pervert all truthful report of my actions and then to abuse their own perversion. This, I think, will justify me in publishing some extracts from letters, speeches, and newspaper notices, which I have in great abundance.

I have no doubt of the result of this war against me. The American people will never allow a man to be hounded down by misrepresentation, and I feel sure that every true American will approve of the stand I have taken. Already I have glimpses of vindication.

The day after the publication of my remarks in opposition to the decoration of Ensign Reynolds I received the following letter from the venerable Democrat, Charles J. Faulkner, of West Virginia, who had been our minister to France and a member of this House:

MARTINSBURG, *May* 26, 1884.

DEAR SIR: I perceive that you concur somewhat in the views which I entertain on the subject of presents from foreign sovereigns to officers of our Government. I arrested the abuse of that policy in the Forty-fourth Congress, and hope you may be equally successful in the present Congress. I send you some remarks made by me on that occasion.

Very truly yours,

CHAS. J. FAULKNER.

Hon. W. E. ROBINSON.

It is well the Brooklyn Eagle did not interview Mr. Stranahan on Mr. Faulkner, or we should have had doleful groans about "Poor old Faulkner!"

QUEEN ELIZABETH.

Mr. Faulkner, in concluding his speech on this subject in the Forty-fourth Congress, referred to the fact that Queen Elizabeth, when Henry IV of France invested two of her bravest officers with the Order of St. Michael, committed them to prison and sent the decorations back, proudly observing:

That as a virtuous woman ought to look on none but her husband, so a subject ought not to cast his eyes on any other sovereign than that of his own country. I will not have my sheep marked with a strange brand, nor suffer them to follow the pipe of a strange shepherd.

WORDS IN MY DEFENSE.

The editor of the American Protectionist, an ably edited and widely read newspaper, published in New York city, in its issue of May 31, 1884, says:

Sunset Cox and other Anglican members took advantage the other day of a hasty and inappropriate expression dropped by Congressman ROBINSON, of Brooklyn, to endeavor to put that zealous, able, and cultivated gentleman in a false light before the public. Mr. ROBINSON'S opposition to the acceptance of foreign monarchical decorations by citizens and officials of the United States is uniform, consistent, and based upon principle. His constituents and the public honor him for his sturdy and steady Americanism and hostility to foreign encroachments upon our political and industrial rights.

I omit the concluding sentence against Mr. COX.

The able editor of the Washington Sentinel of May 31, 1884, referring to my much-abused speech of May 24, on Ensign Reynolds, says:

Now, as an American citizen who favors the continuance of our Republic on the basis of liberty, we protest against Congress hereafter giving permission to any of our officers to accept foreign orders of knighthood, no matter what services they may have rendered. When a foreign sea captain has saved Americans from shipwreck or rendered other humane services, as Ensign Reynolds has done, our Government makes a small present of a chronometer, &c. We tell our Democrats in Congress that old Mr. ROBINSON, the other day, was right when he bitterly denounced this abuse, which grows greater year after year. We tell Mr. COX that the old Irish-American proved himself a better and truer American than he (Mr. COX), and old "Richelieu" showed himself also a better Democrat—one who is still imbued with the old spirit of liberty of 1776—than his deft American Democratic colleague.

That practice of allowing our officers to receive foreign orders is un-American and must be stopped.

At the next occasion we ask our Democratic friends to permit the yeas and nays to be called, so that we can publish the names of those who are fond of aping and introducing European royal customs into our democratic Republic.

At the commencement of this session I called for information from the Navy Department about our officers receiving presents from foreign despots, and on the 15th of January delivered a speech on the subject, over which the pack of English animals made their usual howl. The Washington Sentinel, however, made my speech the subject of an able article, from which I take two or three sentences:

Mr. ROBINSON accompanied the same by an eloquent speech, every word of which we fully indorse, and for which as a freedom-loving citizen we most heartily thank him.

Our readers will remember the indignation with which we noticed in these columns the open part taken by the American admiral at the bombardment of Alexandria last year in favor of the English, how our ships were put before the Egyptian forts in such position as to cover the British and force the Egyptians either to fire into them or let the English creep behind the American fleet.

Our officers should not be allowed to act the flunkies to crowned heads or ape effete aristocracy. Their sympathies should be with the oppressed, and in no case should they be permitted to assist on their own hook the former against the latter.

But under our naval system what else can we expect? We have officers educated in that aristocratic dancing-school at Annapolis at the expense of the people. But we have no American sailors, and without patriotic sailors you can not have a patriotic and efficient navy. The treatment of the sailors on board of American war vessels being so tyrannical and barbaric, and there being no hope for line promotion for an ambitious youth who would like to enlist before the mast, is it to be wondered that our American boys shun our Navy like a penitentiary? Look at the distance between an officer and a sailor on board of our vessels. It is greater than that of any other navy, even the British. Hence, the American boys of the better and educated class do not enlist. There is no hope for them for the future—nothing but low drudgery and coarse treatment.

In conclusion, we once more thank Mr. ROBINSON for his timely resolutions and his manly, truly American (though not of the period) patriotic speech.

The Brooklyn Daily Times of February 28, 1884, says:

CONGRESSMAN ROBINSON INDORSED.

It was said to-day that the majority of the Irish constituents of Hon. WILLIAM E. ROBINSON for the old second Congressional district heartily indorse his action in refusing to agree to unanimous consent on the resolution offered in the House of Representatives to accept the war steamer Alert from the British

Government to lead the Arctic expedition for the relief of the party of Lieutenant Greely.

PUBLIC MEETINGS SUSTAIN ME.

At a very large meeting, including members of the Legislature, judges, ex-governors of the State, and other distinguished citizens in the opera-house at Trenton, N. J., March 4, 1884, a resolution was very enthusiastically adopted, which reads as follows:

Resolved, That we disapprove of the action of our Government in begging and accepting from the Government of England the use of their old vessel the Alert, as a confession of our national decrepitude and a violation of the Constitution of the United States, and that we are opposed to the acceptance of all presents, gifts, and decorations, either for ourselves as a nation or for individuals from any king or prince or foreign state.

I cut the following from the New York Herald of March 6, 1884:

SCRANTON, PA., *March* 5, 1884.

At a meeting of representative Irishmen held here this evening for the purpose of celebrating the anniversary of the birth of Robert Emmet, Rev. George Pepper, of Ohio, made an eloquent address on "Ireland of to-day." The meeting passed resolutions, presented by Mayor Powderly, eulogizing Wendell Phillips and sharply criticising the action of the United States Government in accepting from the British Government the use of the Alert for Arctic explorations, stigmatizing it as an evidence of national weakness and a violation of the Constitution of the Republic. The resolutions also opposed the acceptance of gifts or decorations from any king, prince, or foreign state on principle.

SUSTAINING LETTERS.

I have received numerous letters from gentlemen, some of whom I have never met, indorsing my stand on this question. I give a few extracts and could give dozens more.

Mr. Atkinson, a prominent lawyer at Port Huron, Mich., writes to me under date of June 14, 1884, in these words:

Allow me to congratulate you. You have struck the right line. Samuel Sullivan Cox, "Rat the Newsboy," and others whom you name, and thousands unnamed, deserve recognition before "Sir Lovell Reynolds." I suppose your purpose is to kill off toadyism of the Reynolds kind without reflecting on Reynolds. I could give you scores of names along this wild coast (Lake Huron) just as worthy. They ask nothing, expect nothing, but they would love to see their Representatives in Congress stand firm by the traditions of this nation on the subject of royal titles and their dangerous jingle.

I have a letter from George C. Schaeffer, editor of Westward Ho, a paper published in Washington, dated June 12, 1884, asking me to send him a copy of my joint resolution which created such excitement over the country, in which he says that his ancestors came to this country in 1639; that his great-grandfather was elected governor of Rhode Island and other members of his family conspicuous in public life, and adds:

They and their children were taught that the highest decoration in America was "American citizen," which was torn from the hand of the King of England, costing many a drop of blood and hard-fought battles. My father once lived in your district, which I trust you may long live to represent in Congress.

That is the kind of American whose approval I covet.

A very distinguished officer of the Navy, high in honor and rank, in a letter dated June 20, 1884, after reading my speech on decorations for our officers from foreign powers, says:

I admired so exceedingly your '76 patriotic denunciation of those flunkies who desire to wear foreign livery—words can not express my admiration for your patriotic action—just what my father taught me to believe in. Every American, I mean true American, was inspired when he read your speech, and to think that in that large body there was only one who denounced foreign toadyism!

MORE INDORSEMENTS.

I think I may be justified in publishing as an offset to the denunciations of my English assailants brief extracts from a very few more of the great many letters I have received from distinguished and truly American men and women who have written in approval of my labors and measures in Congress. Many of them are Republicans, and several are unknown to me except by their honored names, but they have been watching my Congressional career and write, many of them I suppose, to show me that the malignant and unjust Anglican attacks upon me have no influence to harm me among true Americans. If any one, either friend or foe, wishes to see the originals, I shall be happy to show them.

A gentleman formerly living in my district and holding a prominent position in Brooklyn, afterward a gallant soldier in the war, and now residing in San Antonio, Tex., writes December 18, 1883:

Our club are rejoiced to find you again in Congress, where Ireland will have at least one untiring advocate. I shall ever hold in grateful remembrance one who has favored me with his friendship and whose talents and patriotism I admire and am proud of.

One of the sweetest of American female authors writes to me from her home on the Hudson, under date of Good Friday, 1884, as follows:

I have enjoyed both your speeches upon American citizens in British prisons more than you can imagine. I heard you when speaking but enjoyed reading much more. Your views regarding the salute awarded the British flag at Yorktown fully accord with my own. I was and am ashamed of Americans who permitted it. I do not fully agree with "Richelieu" in all his sentiments, but I respect and admire his honest opinions, fearlessly expressed, and feel that he strikes the key-note of liberty and right, and that he is on the true path leading to national honor.

The chairman of the Democratic standing committee of Berks County, Pennsylvania, writes me in these words, under date of March 19, 1884:

I have just read in the CONGRESSIONAL RECORD your appeal for the granddaughter of Jefferson, and although not a resident of your district, nor even of your State, I can not refrain from a line of commendation. If the records of the American Congress have a more eloquent, masterly, unanswerable appeal, it has not been my good fortune to read it.

Mr. W. F. A. Schulte, of New York city, writes to me under date of April 15, 1884, in these words:

I have watched your efforts in the last and present Congress on behalf of downtrodden Ireland with a great deal of interest, and I heartily sympathize with you. The cause is just, and you are an earnest, honest, and eloquent champion of those who have suffered from seven centuries of oppression. My feelings are enlisted on account of the persecutions I endured during the troubles of 1848 in Germany, when I was driven from the country.

A gentleman of culture and literary taste, residing in my district in the tenth ward of the city of Brooklyn, writes thus under date of April 17, 1884:

Accept my grateful acknowledgment of the receipt of your very brilliant speech. I feel unmixed and unlimited pleasure in the fact that I had the honor to vote for a Representative to Congress who was so generous and so competent as to advocate the cause and claims of the grandchild of the illustrious and immortal Jefferson. If at any time in the future you may be desirous to seek the suffrages of the voters of this district, you may calculate with certainty on my vote (if I am living) and those of my friends whom I can possibly influence in your regard. Your very interesting and admirable speech I shall preserve and cherish as a valued souvenir.

A prominent physician living in the tenth ward in my district, who I believe generally supports the Republican ticket, writes to me under date April 23, 1884, as follows:

Please accept my thanks for your eloquent address in behalf of the granddaughter of Thomas Jefferson, and I rejoice that Brooklyn has a representative who is able and willing to champion the cause of the forgotten ones, and to remember their descendants unto the third and fourth generation.

A prominent editor of the German press of the city of Brooklyn, living in my district, writes me April 30, 1884, in this language:

As one of your constituents, I regret the bill (pensioning Jefferson's granddaughter) was not passed, and that your grand and patriotic effort was thrown away on those who either from ignorance or political prejudice were lost to your brilliant effort.

A lady who lives in my district on Prospect Heights, whose family is among the most distinguished Americans, and whose pen is well known to the literary world, writes me under date of May 7, 1884:

Let me add my congratulations upon the occasion of your birthday. "May you live a thousand years, and your shadow never be less." I have read with more than a great deal of pleasure all that you did in regard to the granddaughter of Mr. Jefferson, who was the dear and intimate friend of my grandfather, Judge Sherburne, of Portsmouth, N. H., and of your generous, chivalrous support of woman and her needs.

An Irish lady whose genius has called forth frequent applause from American audiences writes me in these words, May 17, 1884:

Accept my sincere thanks. It has afforded me more pleasure than I can express to read your most beautiful tribute to Jefferson's granddaughter.

A prominent and able American journalist, resident of the city of Brooklyn, and editor of a leading American magazine, under date of May 17, 1884, writes to me in these words:

Please accept my sincere thanks for your eloquent speech in behalf of Jefferson's granddaughter. I read it with great interest. I am not, as you know, a Democrat, but I can say frankly to you, as I have said to my Republican friends here, that your course in this Congress, which I have carefully watched, has been more creditable to you and to Brooklyn than that of any of our other Representatives, and if I lived in your district—I am sorry I do not—I should vote for you every time.

The chief-justice of the supreme court of the State of Maine, who was a companion in Yale College and a member with me of the Fortieth Congress, writes under date of May 18, 1884:

Yours is received, and your speech, too, which I have read and was interested therein. * * * I wish to God I had a thousand votes to give her (Jefferson's granddaughter). I would flood your bill with them. I should blush for an American Congress that would reject such a bill upon constitutional ground. But you demolished that with a battery that sends out shot and shell in examples and precedents. How vividly you come up before my view in connection with college matters.

At the grand celebration of the Mechlenburg Declaration of Independence two years ago, at Charlotte, N. C., where I was a guest, Senator RANSOM, in the opening speech, made a reference to me in about the language of Judge Black's letter below.

JUDGES BLACK AND HOLMAN.

I give only two more extracts: one from the late Judge Black, of Pennsylvania, who in dying a short time since left no superior American statesman behind him; the other from Judge WILLIAM S. HOLMAN, of Indiana, at present a member of this House:

BROCKIE (near York), *April* 24, 1882.

Hon. W. E. ROBINSON:

I got your speech since I came home. It came under cover franked by Mr. (Senator) BAYARD. * * * As an American citizen who loves justice and hates wrong, I can not but admire the man who has done as much as you have to make up and sustain the great issue between free government and despotic rule on both sides of the Atlantic, and therefore,

I am now, and forever will be, yours, most truly,

J. S. BLACK.

HOUSE OF REPRESENTATIVES,
Washington, August 8, 1882.

MY DEAR SIR: I can not part with you in the closing moments of the session of Congress without expressing to you the satisfaction I have felt as one of your colleagues in this House in the record you have made. Your course in compelling the attention of Congress and the Government to the wrongs inflicted on American citizens by Great Britain; your heroic conduct in the beginning against overwhelming odds in asserting the rights of oppressed citizens to the full protection of their Government, and your conservative and prudent action in all measures of public policy have commanded my sincere admiration.

Hoping, my dear friend, that your constituents will long continue you in a position you fill so admirably,

I am, sincerely, yours,

WILLIAM S. HOLMAN.

Hon. W. E. ROBINSON.

I need not say that these brief tributes from Judge Black and Judge HOLMAN would more than repay for all the wrongs which an unscrupulous Anglified press could heap upon me.

In answer to the charge that I have paid too much attention to this anglomania craze to the neglect of measures of more national importance, I might quote much more largely from the public press and from my own correspondence. Venerable bishops and venerated clergy of the Catholic and Episcopal Churches, doctors of divinity of Presbyterian and other non-episcopal churches, particularly the renowned pulpit orator Dr. T. De Witt Talmage, whose tabernacle is in my own district, and whose hearty compliments I have kindly and gratefully received; editors of magazines, reviews, and other publications; distinguished generals and naval heroes, including General Hancock; the living representatives of the distinguished dead, including Jefferson and Monroe; public libraries in my own city, printed in their annual reports; legislative bodies and immense public assemblies, all speaking and writing and voting in hearty approval of my course, might perhaps flatter the vanity of even those less liable to that failing than myself.

But after all, it is my own grand constituency of my own district, in my own city of Brooklyn, whose approval I most covet, and to whom in due time I shall submit my conduct for their approval or disapproval. If they want a representative who will join in singing "God save the Queen" they must seek for some different man. I believe in the Star Spangled Banner, every red stripe of which represents the blood which our natural enemy, England, wrung from our hearts, and of which every star that glitters in its glory reflects the fame of our devoted friend, old Ireland.

NON-INTERCOURSE WITH DIPLOMATS.

On the 26th of May, 1884, I introduced a joint resolution into this House, in the following words:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be a standing rule in both Houses of Congress that no member of either House ought to receive or give any visit to or from any foreign agent or embassador, or any other person that avows himself to be a public agent or embassador for a foreign country, without the consent of the House to which he belongs.

That resolution brought down upon me the abuse of the English snobs that now so largely control the American press, and the Washington correspondent of the Brooklyn Eagle pronounced it "rampant and unapproachable absurdity." I do not expect these scribblers to know much about American history, but I may inform them that it is a copy of the resolution introduced by Senator Tazewell, of Virginia, into the Senate of the United States on the 27th of April, 1798, and though it did not pass it received the votes of Senators Bloodworth, Langdon, Mason, Tazewell, and other illustrious Revolutionary patriots. It expressed the opinions of our patriotic fathers against this foreign influence which we are now courting. What chance has an American citizen for fair play against a government whose minister is wining and dining our Congressmen and others in authority? We want some such resolution to save Republican principles.

DIPLOMATIC SPIES.

I have an idea that we are unconsciously, through our diplomatic network over Europe, the most efficient detectives of European despots. The first-born impulse for freedom very naturally occurs in the United States, and monarchies can well afford to show their favors to all spies who will detect to them the first throbbings of liberty.

In my first speech against Mr. Lowell in this House, January 26, 1882, page 13, I called attention to the fact of the British secret service in this country, of which the British minister is head, and includes not less than two hundred spies in this country. They have the names of all officers of land leagues and other organizations in this country opposed to English interests, and I hinted that some of our representatives abroad have acted as volunteer spies. We have seen that one of these British spies had access to our post-office in New York, but while our Postmaster-General acknowledges that this is true, he felicitates himself on the fact that this spy was not actually caught opening our business men's letters. Happy country, with such a confiding spirit!

CONGRESS ON IRELAND.

When I reflect I wonder what has changed the noble sentiment in regard to Ireland. Nearly every Congress for the last twenty-five years has passed resolutions of sympathy with Ireland. Mr. Parnell when he was here was received in this House and occupied its floor in a brilliant speech. In July, 1866, a joint resolution was passed and approved by the President in the following words:

Whereas the House has been informed that certain peaceable and law-abiding citizens, while assembled at and within the building recently erected in this city for the benefit of orphans of deceased soldiers and sailors of the United States, situate on the corner of Seventh street and Pennsylvania avenue, have been illegally and improperly dispersed by the mayor of this city for the alleged reason that they belonged to a Fenian organization, and thus prevented from exercising their rights and privileges as citizens of the United States: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That said citizens are hereby authorized, whenever permitted so to do by the Speaker of this House or the President of the Senate, to use and to occupy said building for the purpose of holding meetings for any proper and lawful purpose, and particularly in reference to the liberation of Ireland.

Approved July 28, 1866.

Among the Senators voting for that resolution were Chandler, Howard, Morgan, Nye, Stewart, Wade, Wilson, and Yates. It passed the House without opposition. What would be said now if I should move to give our public building for the holding of Fenian meetings, and "particularly for any meeting for the liberation of Ireland?"

In March, 1867, the following joint resolution was introduced in the Senate by Mr. Nye, of Nevada:

Joint resolution extending sympathy to the people of Ireland.

Whereas the Irish people, after seven centuries of outrage and misery, have called upon God and mankind to witness the justice of their cause and the intensity of their sufferings, and have appealed to the republicans of the entire world for sympathy and assistance against their British oppressors: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in response to an invitation which reminds us equally of the trials and pledges of the American Revolution, and full of admiration of the principles which inspire their determined protest against a tyranny the most inexcusable and defenseless because waged by a government which boasts of its Christianity and civilization, and in obedience to the sentiments of millions of happy American freemen, we hereby extend our sincere and earnest sympathy to the people of Ireland in their noble stand against their British oppressors.

Resolutions of that kind passed either House without opposition, but England is getting the upper hand. I tried to introduce a similar resolution into this House in the Forty-seventh Congress, but the Speaker's eye was not upon me. I have not dared to try it in this Congress.

The last resolution of this kind, I believe, was offered in the Forty-sixth Congress by the distingnished gentleman from Indiana [Mr. CALKINS] and passed unanimously.

In the Fortieth Congress, in March, 1867, I offered a similar resolution, which was unanimously adopted.

Who will offer such a resolution next? I hope when it shall be offered the gentleman from Illinois [Mr. DUNHAM] may not be present, for he would probably refer it to the Committee on Public Health!

WENDELL PHILLIPS AND HORACE GREELEY.

In a letter dated Boston, November 2, 1881, Wendell Phillips says:

Ireland to-day leads the van in the struggle for right, justice, and freedom.

And in his address to the students of Harvard College he made the following eloquent appeal in her behalf:

Ireland is another touchstone which reveals to us how absurdly we masquerade in democratic trappings while we have gone to seed in tory distrust of the people; false to every duty, which, as eldest-born of democratic institutions, we owe to the oppressed, and careless of the lesson every such movement may be made in keeping public thought clear, keen, and fresh as to principles which are the essence of our civilization, the groundwork of all education in republics.

We ought to clap our hands at every fresh Irish "outrage," as a parrot press styles it, aware that it is only a far-off echo of the musket-shots that rattled against the old State House on the 5th of March, 1770, and of the warwhoop that made the tiny spire of the Old South tremble when Boston rioters emptied the three Indian tea ships into the sea—welcome evidence of living force and rare intelligence in the victim, and the sign that the day of deliverance draws each hour nearer. Cease ringing endless changes of eulogy on the men who made North's Boston port bill a failure while every leading journal sends daily over the water wishes for the success of Gladstone's copy of the bill for Ireland.

Ireland is still the touchstone of truth. Wherever a true American exists she has a friend; wherever despotism has an advocate she finds an enemy.

I have kept as a sacred relic the address "To the friends of Ireland" written by Horace Greeley, dated New York, October 3, 1848, and published conspicuously in the New York Tribune the next day, signed by Judge Robert Emmet, Charles O'Conor, Judge James W. White, Horace Greeley, and others at that time known as the "Irish Directory." As I was then an editor of the Tribune, I cut the printed address from the paper, which I pasted on the last page of the manuscript, which contained their autograph signatures, from which I copy a few words:

We do not believe that the star of Ireland's hope is set forever. Determined to devote ourselves to the regeneration of Ireland, we will from time to time, as occasion may demand, hereafter address our friends in this form, and hope one day to announce the glad tidings that Ireland is a republic.

I need hardly say that I do not like the change in our national sentiments so boldly acknowledged by the paragraphs which I have quoted from the Cincinnati News-Journal and the Washington Daily Post acknowledging our return to monarchical ways. The saluting of the English flag at Yorktown; our military officers appointed to wait upon Lord Lorne on his visit here; our insult to American manhood in being compelled to wear livery; our willingness to vote presents and even decorations to our officers from foreign despots in violation of our Constitution; our doleful attempts to imitate English squireens in fox hunts at Newport and elsewhere, at which American ladies forget their American womanhood in witnessing the barbarities inflicted on the poor half-tamed pet fox that does not know enough of its wild nature to get away from its cruel quadrupedal or more inhuman bipedal pursuers; the crazy homage which we recently paid to the lord chief-justice representing the tyranny with which the judiciary of a fearful despotism trampled down the rights of its subjects; the flunkeyism of our Treasury Department in ordering, illegally, his baggage to be passed through the custom-house without search, while members of our own American judiciary and their wives and daughters have been subjected

to the most annoying searches in their trunks and on their shrinking persons; the proposing of the queen's health on the last celebration of her birthday at the royal residence of her lordly representative by one of our highest officials; buying and accepting English ships to send on our national expedition when our own ship-builders were ready at less cost and in less time to furnish superior vessels for the service; spies admitted to our post-offices to facilitate the betrayal of our republicans who sympathize with freedom into the hands of an unmerciful foe; singing and playing "God save the Queen" and "Rule Britannia" by our national bands and on public occasions; the undue and undeserved craze over foreign actors and artists to the neglect and injury of our own superior native talent; the use of our national vessels as private yachts for feeding the vanity of our public servants and their families when, if they could be spared for any such service, they should be used for excursions on the water to give fresh air and renewed health to the poor and sickly widows and orphans of the gallant soldiers who fell in the struggle for the Union; the unconstitutional use of official flags in imitation of royal customs by our Secretaries and President, when no flag but the starry banner should be displayed; the interference of foreign ministers in Congressional matters and the formation of our Congressional committees; the homage, almost adoration, with which foreign lecturers are received, even by our public servants, whose tongues and pens are still sibilant with curses upon our people and Government—to these and other imitations and encroachments of foreign folly and aristocratic antics I am unalterably opposed. I believe the American people are with me. I believe my own district, which includes the wealth and worth, the culture and brains, as well as the more useful working classes, is with me. In the imminent Presidential election these things will have a vast influence on the issue. The least appearance of pandering to these aristocratic innovations or departure from American manners will influence the votes of a million Democratic voters more than any question deemed by short-sighted Congressmen as of more importance.

I stand up for the American ideas of Washington and Jefferson, and shall oppose all measures in favor of monopolies and land-grabbing.

Room for American ideas; perpetuate our American independence; revive our ship-building; restore our marine commerce; protect American labor, and elevate the condition of the workingman; limit the hours and increase the pay of American labor; prompt relief and liberal pensions to our soldiers and sailors; enlarge postal facilities, and secure a uniform penny postage. These are objects to which I have been and shall be devoted as long as I remain here. If my constituents disapprove of this, let them, at the dictation of English snobbery, call me home.

Let us be content with the honors and customs of our own country, in place of running abroad for honors and decorations; give undivided allegiance to our own glorious flag, or, if forced to show our preferences, let our hatred be for tyrants and our sympathy for the oppressed. Waste no admiration on foreign governments while you have one of your own to which every true American may proudly turn and exclaim:

> Empires shall perish and monarchies fail;
> Kingdoms and thrones in thy glory grow pale;
> Thou shalt live on, and thy people shall own
> Loyalty's sweet, where each heart is thy throne;
> Union and freedom thine heritage be—
> Country of Washington, blessings on thee!

A National Policy of Public Buildings—The Public Building at Detroit, Mich.

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 5, 1884.

The House being in Committee of the Whole House on the state of the Union, for the consideration of bills reported from the Committee on Public Buildings and Grounds—

Mr. CUTCHEON said:

Mr. CHAIRMAN: I beg the attention of the House for a few moments to some considerations affecting the matter of public buildings. It has been charged, or at least intimated here, that there is a public building pool, or ring, or combination. If there be such a combination, Mr. Chairman, I certainly have no knowledge of it. There is nowhere in this long list any bill that affects my district directly or that comes within two hundred miles of it. So far as I am concerned, each of these bills stands and shall stand upon its own merits if it has any.

As a matter of general principle and of national policy, I am in favor of the National Government conducting its business in its own buildings, constructed and adapted for its own use. I do not believe that any judicious and far-seeing business man would do business or could successfully do business upon the plan that this Government has hitherto largely pursued. I said I was not directly interested in this bill, but I am interested, as is every citizen of Michigan, in the bill somewhere on this Calendar for a new public building in the city of Detroit, which we all proudly own as the metropolis of our State—"the City of the Straits."

It may serve as a sample of that false economy which has failed to provide adequate facilities for the transaction of the public business, when I state that less than one-half of the Government business in that city is transacted in the Government's building, and that more than $5,000 is annually expended there in rents for the accommodation of Government offices outside the public building.

The fact is that long years ago the city and the public business had outgrown the quarters provided, and all sorts of wasteful and extravagant expedients have been resorted to, and the public business is scattered all about the city; the post and customs office in one place, the internal revenue in another, the engineer in a third, the life-saving service in a fourth, and so on to the end. In using this as an illustration I beg to print some further facts and statistics, that members may have them to refer to when that bill is reached, as the time allowed on each bill will preclude their presentation then.

I desire to take this occasion, Mr. Chairman, to say that I am not in favor of extravagant expenditures for public buildings, but I am in favor of an economical liberality. This Government is to endure, I hope and trust, for a thousand years. So long as it endures it will need, and must have, post-offices, court-houses, custom-houses, and accommodations for its other public business. The demand will never be less, but will constantly increase.

Judging by the growth of the past quarter of a century, we can scarcely conceive how great that increase will be. The child is now born who will see not less than 200,000,000 people inhabiting this continent. These will all demand and must have the postal facilities and the revenue facilities pertaining to a mighty nation. We know not what new developments in commerce, in manufactures, in invention await us. The coming of the postal telegraph or the universal postal telephone I regard as only a question of time, and of but a short time at that.

The great commercial age is at our door. Here in this great temperate belt of the American continent is to be its grandest field of development. We legislate to-day for nearly 55,000,000 of people. The next generation which stands in our place will legislate for 100,000,000, and our grandchildren will legislate for 200,000,000. The vast business of these coming millions must be carried on; it must have appropriate buildings in which it shall be carried on. If they shall be constructed by the Government for the express use for which they are designed the business can be conducted conveniently and economically. If this business is to be carried on in buildings not designed for the use to which they are appropriated the business will be carried on wastefully and uneconomically.

It is a disgrace to this nation that the post-office business of this capital is carried on in an old tumble-down hotel structure utterly unfitted for the use to which it is put and utterly destructive of all economy of force or finance. And so it is all over the country. The business of this great Government is carried on in rented buildings, wholly unadapted to its use, at great loss of time, money, and business. It is time this contemptible, cheese-paring policy was abandoned. We are no longer colonies. We are the great Republic of the West. We are in the second century of our national existence. The crisis of national peril has been safely passed. Henceforth the path of empire lies straight and plain before us. It is time that the National Government transacted its business in its own quarters, designed and adapted to its use. There can be no more absurd idea than that hoarding is economy.

In this case holding hundreds of millions of dollars in the Treasury while the Government has not a decent roof over its head is unmitigated foolishness and extravagance. Money is only a blessing when it is used. These millons should be put in circulation throughout the States, giving employment to thousands of artisans, expended not in wasteful jobs and ornate architecture, but in the erection of solid, substantial, enduring, and dignified public buildings, that shall stand as some fit and worthy symbol of the sovereignty of this nation, the majesty of the people.

Mr. Chairman, there is an economy (so called) that is simply the outward sign of a shriveled soul. It is not economy, but niggardliness. To use a homely phrase, "It saves at the spigot and wastes at the bung." It is the economy of the miser, who sees no use to which money can be put but to hoard it, while all the utilities and beauties of life lie waste and unimproved.

We stand here to legislate for a great Government, for a great people, and for a great future. We are to-day in the van of the world's advance. We are building for the coming generations. Let us build as for the future; build like statesmen; build in a spirit that shall have some of the breadth of the continent; build as though we believed that this great nation, this noble sisterhood of "States in empire," were to be perpetual.

APPENDIX.

The present public building at Detroit is occupied as follows:

The basement, though wholly underground, is constantly used by

the Post-Office Department for receiving, sorting, and dispatching mails. It is a wholly unfit place, but is used of necessity.

The main or first floor is wholly occupied by the post-office, but is so inadequate that it is very greatly crowded and very poorly lighted for its use. On the first floor and part of the second it is necessary to burn gas constantly in order to transact the business. The gas bill for the year ending December 31, 1883, was $5,073, and fully four-fifths of this was consumed in the post-office.

The second floor is occupied by the custom-house, the United States district attorney's office, and the clerks of the United States circuit and district courts. The accommodations for the custom-house are wholly inadequate.

The third floor is used by the United States court-rooms, judges' rooms, jury-rooms, United States marshal, supervising and local inspectors of steamboats, and special agents of the Treasury Department.

In addition to these the following offices are maintained in rented buildings at rentals as indicated:

Appraiser's store, at wharf	$300
Customs office, at wharf	250
Life-Saving Service	72
Internal-revenue office	1,100
Signal Corps	264
Marine-Hospital Service	300
Office paymaster United States Army	300
First office Engineer Corps (General O. M. Poe)	780
Second office Engineer Corps	480
Third office Engineer Corps (Major Howard)	200
Light-House Board	345
Light-House Board (second)	480
Pension office	900
United States land offices	300
Total rents	5,185

That a correct idea may be formed of the needs of the customs service at Detroit, it should be borne in mind that for the year ending June 30, 1883, there were entered at that port—

Foreign vessels (being the largest of any port in the United States except New York city)	3,010
Foreign vessels cleared (being also the largest in the United States except New York)	2,972
Number of entries of merchandise (being 6,501 more entries than at Chicago the same year, where the number was 10,203; in the number of entries made Detroit stands seventh in the United States, only New York, Boston, Philadelphia, San Francisco, Burlington, Vt., and Port Huron having more)	16,704
Value of foreign exports (being third in rank for foreign exports, only New York and Portland leading Detroit)	$3,509,936

COASTWISE TRADE.

Coastwise vessels entered (being eighth in the United States)	2,461
Coastwise vessels cleared (being eighth in the United States)	2,553
Number of vessels documented (being twenty-third in a list of one hundred and twenty-nine ports which issued documents)	394
Customs collections last fiscal year	$406,846 46

INTERNAL REVENUE.

Internal-revenue collections for the last fiscal year amounted to	$1,251,419 52

PENSION OFFICE.

The Detroit United States pension office annually disburses about	$2,000,000 00

POST-OFFICE BUSINESS.

To show the past and prospective increase of business in the Detroit post-office, the following official figures are appended:

Years.	Gross receipts.	Net revenue.
1861	$34,147 91	$10,627 00
1866	89,634 27	41,472 33
1871	134,591 95	77,073 81
1876	182,397 76	116,544 24
1879	205,313 49	139,849 33
1883	391,884 99	233,647 26

Number of letters delivered by carriers: 1869, 187,199; 1879, 4,692,121; 1883, 7,046,192.

Number of letters mailed: 1874, 4,591,873; 1879, 7,362,050; 1883, total number of pieces of mail matter received and delivered, 34,110,101; money-order receipts, 1876, $1,491,650; 1883, $2,594,080; total cash receipts, 1883, $2,985,964.

UNITED STATES COURTS AT DETROIT.

Fiscal year ending June 30, 1883:	
United States civil cases terminated during year	34
United States criminal cases terminated during year	71
Civil suits (other than United States) commenced	155
Civil suits (other than United States) terminated	165
Admiralty cases commenced	242
Admiralty cases terminated	213
Total cases terminated	483

Government officers and employés to be accommodated in Government building:

1. The United States post-office, with all its adjuncts: In addition to the regular officers and employés there are fifty-six railway postal clerks who regularly report here.
2. The United States custom-house, with all its adjuncts, and forty-eight customs officials who report here regularly.
3. The United States circuit and district courts, with all their adjuncts of judges, district attorneys, marshals, juries, clerks, commissioners, &c.
4. The internal-revenue office.
5. The United States pension office.
6. The Life-Saving Service.
7. Signal Corps.
8. Marine-Hospital Service.
9. Office United States paymaster.
10. United States Engineer Corps, in all its departments.
11. The Light-House Board.

At the present time only the first three are accommodated partially in the Government building. The total number of United States officers and employés now on duty at Detroit and entitled to office accommodations is 196.

COMMERCIAL STATISTICS OF DETROIT.

Bank capital, 1883	$4,100,000
Bank deposits, 1883	21,745,000
Bank loans and discounts, 1883	18,113,000
Bank clearing-house transactions for month of December, 1883	14,374,554

To this I add only a few items of transportation:

Shipments of corn from Detroit:	*Bushels.*
1880	218,997
1881	310,276
1882	633,245
1883	1,572,627
Shipments of wheat from Detroit:	
1881	4,793,067
1882	5,816,749
1883	6,260,480

MANUFACTURES.

Number of establishments, 1880	919
Capital employed, 1880	$15,594,479
Value of manufactured products, 1880	$30,181,416

POPULATION.

1870, census report	79,577
1880, census report	116,340
1884 (estimated)	150,000

The great growth of Detroit during the past four years is indicated in part by the increase of business in the post-office.

The foregoing statistics give a very imperfect idea of the Government business to be transacted and the number of employés and officers to be accommodated. The present accommodations are not one-half equal to the demand. Such is the present aspect of the case.

Few cities in the Union have made more rapid strides in population and business during the past four years than Detroit. It is one of the great entrepôts of the United States. It is the metropolis and the great depot of one of the most flourishing of the States of the Union—a State which, although not yet half a century old, is nevertheless ninth in population, ninth in the product of manufactures, fourth in the production of wheat and wool, and first in its product of iron, copper, lumber, and salt, and sixth in the scale of least illiteracy, being surpassed only by Wyoming, Nebraska, Iowa, Maine, and Dakota in the order stated.

The State of Michigan, with nearly 2,000,000 inhabitants, has but three Government buildings within its boundaries:

1. The building at Detroit, completed in 1860 at an original cost of $182,733, and upon which has been expended in twenty-four years in repairs and changes the sum of $31,685.57, making a total of—

Buildings	$214,418 60
Cost of site	24,000 00
Total	238,418 00

2. The court-house and post-office at Grand Rapids, which cost—

Buildings	$141,413 00
Site	69,996 00
Total	211,409 00

3. Custom-house and court-house at Port Huron (one of the largest ports of entry in the United States)—

Building	$341,876 71
Site	5,205 00
Total	247,081 71

4. Besides this a site has been acquired at Marquette, in the Upper Peninsula, at a cost of $7,075—making a grand total for the entire State of Michigan from its admission until the present time of $803,983.71.

I desire to compare this with the expenditure for public buildings in other States at points comparatively small and commercially unimportant, and with the exception of Portland, Me., and Charleston, S. C., not upon the coast or frontier, and where the actual necessity for large expenditure is comparatively small; not that this will increase our need or the justice of our demand for the metropolis of Michigan, but that it may appeal to your sense of equity and fair dealing:

Name of city.	Population, 1880.	Cost of building.	Cost of site.	Total.
Albany, N. Y.	90,758	$535,518 25	$155,700 90	$691,219 15
Carson City, Nev.	4,229	434,369 98		434,369 98
Charleston, S. C.	49,984	2,778,736 61	190,000 00	2,968,736 61
Fall River, Mass.	48,961	361,396 54	132,856 65	494,253 19
Hartford, Conn.	42,015	837,836 93		837,836 93
Knoxville, Tenn	9,693	388,841 72	10,300 00	399,141 72
Nashville, Tenn.	43,350	404,777 99	38,500 00	443,277 99
Portland, Me. (exclusive of marine hospital)	33,810	915,415 02	40,500 00	955,915 02

Rivers and Harbors.

SPEECH

OF

HON. BENTON McMILLLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 10, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. McMILLIN said:

Mr. CHAIRMAN: With a full knowledge of the Cumberland River I concur heartily with what my colleague [Mr. CALDWELL] has said concerning it. It is in many respects the most remarkable river on the continent. For more than six hundred miles it is navigable for a good portion of the year without locks and dams. Its banks are rock-bound and its bed is rock; so that there is no difficulty in getting all the abutment necessary for the most perfect system of improvement and all the material necessary for the work. There is probably no other river in the world upon which the same amount of valuable improvement can be placed at so small a cost.

Notwithstanding the great length of the stream, its average width is only from one hundred to one hundred and fifty yards. Yet for a good portion of the year boats carrying four hundred tons can run, and did run even before any improvements were placed on the river. The object we have in view by the amendment proposed is to appropriate $100,000 to begin the work of locking and damming, and I hope the House will vary from the rule adopted of sustaining the committee and adopt this amendment.

The country through which it passes is unsurpassed in fertility anywhere in the world. It is as rich as the valley of the Ganges or the Jumna. This river is, as I have said, only from one hundred to one hundred and fifty yards wide, with a deep channel that has not changed perceptibly since the country was settled. There are no quicksands to sap the foundations of the dams; there are none of the thousand difficulties that are encountered on other works of improvement of this kind. It has an average fall, I believe, of about eight inches to the mile. Each lock and each dam placed upon it according to the plan prepared in the engineer's report, which is practically adopted by the committee, will give permanent navigation for twenty miles.

Sirs, look what a work can be done with but little more than $3,000,000. Cincinnati has paid more than twenty millions for her Southern road. It is but little longer than this river. For one-seventh of the amount her road cost we can have a river made navigable the whole year, with no cross-ties to rot every ten years, no embankments to wash out, no rails to wear out and be replaced every few years; a free highway for commerce where the great Maker of the universe intended there should be one.

It is not like the Muscle Shoals improvement. There you have had to spend millions before the least benefit could be derived from your improvement. Here when you have expended a hundred thousand dollars you get one lock, and then there is permanent navigation for more than twenty miles above it for all time. You get full benefit of the work even while it progresses.

One other point I wish to call your attention to. The report of the engineer states that the work already done upon this river, which has cost more than a quarter of a million dollars, can be utilized and will be of vast service in the construction of the locks proposed by the new system. It is not like abandoning an old system of improvements and adopting a new where all the old work is lost and useless. Take for example the Sand Shoals near my own home. There the work consisted of deepening the channel of the river by blasting out the rocks of the bottom. It requires no argument to prove that it will require fewer and lower dams where this has been done.

I know the committee have labored under difficulty. I do not charge them with punic faith in this matter. Our greatest trouble has arisen from the fact that the report of the engineer in charge of the work, Major King, was held back until more than half this session was gone. It never came out until my colleague and I went before the committee, and we for the first time brought it to their attention. If the members of the Committee on Rivers and Harbors could have had that report as they had those of other rivers, I can not doubt the result would have been different. The other reports reached them the first of the session last December; this one not until after the middle of March, when the committee had settled on the basis of their bill and done much of the work. It is now for us to consider whether it is not wise to commence and continue the improvement in the way proposed.

Notwithstanding the delay of the report and the inconvenience it has caused the committee—I hope not, but I am sure when the Senate, the House, and the Committee on Rivers and Harbors come to understand fully the importance of this work as they could have done if the report had been made out in time—I feel quite sure they will see the wisdom of the expenditure.

Time after time I went to General Wright's office, at the opening of this session, to get the report before the committee in season that we might get the appropriation in this bill. But the response was given that it had not yet been forwarded to Washington from Chattanooga. This continued till only a few weeks before this bill was reported to the House. I had visited Captain Turrill twice before I came on to Washington last December, and he had promised me he would forward it to Major King as soon as possible, which I heard he did.

Mr. Chairman, I succeeded in getting an appropriation two years ago to have a survey of the Cumberland River, with a view of locking and damming it. The following is the report of the survey; it only requires a glance to show that the work is eminently practicable:

SURVEY WITH A VIEW TO PLACING LOCKS AND DAMS ON THE CUMBERLAND RIVER FROM NASHVILLE, TENN., TO THE CINCINNATI SOUTHERN RAILROAD IN KENTUCKY.

UNITED STATES ENGINEER OFFICE,
Chattanooga, Tenn., February 26, 1884.

GENERAL: I have the honor to submit the following report on the survey of the Cumberland River from Nashville, Tenn., to the Cincinnati Southern Railroad, Kentucky, made in compliance with your instructions of April 24, 1883, as follows:

"To make such survey and report as to the cost of placing locks and dams on the Cumberland River from Nashville, Tenn., to the Cincinnati Southern Railroad in Kentucky, as, in the opinion of the Secretary of War, is necessary to complete the examination and report of said river; said report to be—

"First. As to the practicability of the work.

"Second. Its probable cost from Nashville to the Kentucky line.

"Third. The cost from the Kentucky line to the Cincinnati Southern Railroad.

"Fourth. The cost of locking and damming so as to improve Smith's Shoals."

The survey was begun at Point Burnside, the crossing of the Cincinnati Southern Railroad, on the 15th of July last, and was extended to Nashville, a distance of 328 miles, and embraced a continuous line of levels and transit line with cross-sections, and soundings at the shoals and proposed lock-sites.

The field-work of the survey was completed on the 1st of November last, and it was intended that the maps also should be completed before the end of November, but it was found impracticable to do so, and they were not completed until last week.

A survey of Smith's Shoals had already been made and reported upon (Senate Ex. Doc., No. 132, Forty-seventh Congress, first session), so that nothing further was needed in that respect to furnish the information called for in the letter of instructions.

It was found by the survey that the entire fall between Point Burnside and Nashville is 223 feet, or about 8 inches per mile, and that the general slope is quite uniform.

The banks are sufficiently high in most cases to prevent overflow, and the river bed is generally rock, which would give secure foundation for the proposed locks.

This river has heretofore been improved by means of wing-dams and channel excavations, with a view to securing an increased depth of channel at medium stages of the river, but without attempting to secure a navigable depth at extreme low water, and while greatly facilitating navigation, it is evident that such a system of improvement is but a partial removal of the difficulty. It is quite likely that if the stages of the river could be known in advance, so that steamboats could take full advantage of all navigable boating-tides during the year, all the commerce of the Cumberland River could be carried on without a more radical system of improvement, but there would be several months of low water, when all navigation would be suspended. Boats drawing from 21 to 30 inches can, in some seasons, run eight months during the year.

The following table shows the average number of days per annum in the five years from 1876 to 1880, inclusive, when the river at Nashville stood at different levels on the gauge:

	Feet.
For 188 days the river was above	5
For 128 days the river was above	10
For 65 days the river was above	15
For 39 days the river was above	20
For 27 days the river was above	25

One trouble in taking advantage of boating-tides is that many of them are of such short duration that boats would not have time to make the entire trip without danger of getting caught on the way, which would entail great expense, delay, and liability to damage perishable articles of freight.

The proposed system of improvement by locks and dams will require twenty-three locks with lifts, varying from 6.5 to 11.8 feet at low water, with side walls sufficiently high in each location to permit boats to pass the locks until the water is high enough to allow them to pass over the dams. As it will require from 20 to 25 feet rise to enable boats to pass over the dams safely, it will be seen from the foregoing table that on an average the locks will be used about eleven months in the year, and during one month the boats will have to pass over the dams.

It is proposed to build the locks of solid masonry and found them upon the rock. They should be about 60 feet wide and 250 feet between miter sills, though perhaps smaller dimensions would answer the purpose.

There will be a dam required at each lock from 250 to 500 feet long, and these should be made of stone and timber with secure foundations. Each dam will back the water to the next lock above, a distance of from 8 to 19 miles, and give a depth of 5 feet on the lower miter sill.

The questions suggested in the letter of instructions may be answered as follows, taking them in their order:

1. There is no doubt as to the practicability of the work. A very similar, but more difficult work, on account of bad foundations, has been successfully tested on the Kentucky River, below Frankfort.

2. The probable cost from Nashville to the Kentucky line, as estimated by Mr. Turrill, is	$1,987,536
3. The probable cost from Kentucky line to the Cincinnati Southern Railroad he estimates at	1,215,386
Making a total of	3,202,922
4. The cost of locking and damming Smith's Shoals, as estimated in my report of February 15, 1882, is	877,000
Which, added to the foregoing, makes	4,077,922
The cost of operating the thirty locks, including seven at Smith's Shoals, will be about $1,200 per annum each, or $36,000, which, capitalized at 3 per cent., makes	1,200,000
Making the entire expenditure involved in the project	5,277,922

The prices, per unit of quantity, given in Mr. Turrill's estimate, are generally much lower than could probably be realized in conducting such work, especially when we consider that it is scattered along 328 miles of river subject to sudden and heavy freshets, and that the annual appropriations for such works are generally scattered over eight or ten years of time.

If undertaken, the work should be begun at Nashville and extended up the river so that the improvement can be utilized as fast as it is completed. This will benefit commerce, even on the upper river, more than to begin at two or more places, because the upper end of the improved river will always be the base from which boats can safely undertake hasty trips to the upper waters of the Cumberland and its tributaries on short tides in summer. Any attempt to improve intermediate sections would not only add greatly to the cost of the work but would delay its completion, and the detached locks and dams would be of no use until connected with the completed work below.

As to whether this "improvement is proper to be made," it may be remarked that some more radical improvement of the Cumberland is evidently demanded by the interests of commerce; and if the necessary depth of water can not be obtained without locks and dams, the expenditure of $5,000,000 for building them may be justified. But before deciding this point it is proper to inquire whether the same amount of money, or even a much smaller sum, may not provide a sufficient depth of water for all commercial purposes. It must also be borne in mind that the system of locks, even if completed in the most substantial manner, would not be an unmixed blessing, since they would at all times cause some delay, and accidents might occasionally stop navigation altogether for several days at a time; but at all times when the river is above say fifteen feet at Nashville navigation would be better without locks than with them.

When the river at Nashville is above ten feet, or about four months in each year, there is probably sufficient water for all purposes of navigation, so that the locks may be considered as desirable only eight months in the year, or two-thirds of the time, while during the other third they would not only cause delay and expense for working, but would be practically unnecessary. As the average fall is only eight inches per mile, there would be no trouble about rapid currents if the slope could be made tolerably uniform, and the important question would be to get a sufficient depth of water. To determine whether this is practicable the low-water discharge of the river was measured at three points, with the following results, namely:

1. Above the Kentucky and Tennessee State line, 850 cubic feet per second.
2. Above the mouth of Caney Fork, 1,100 cubic feet per second.
3. Near Nashville, 1,325 cubic feet per second.

By computation it is found that if the river at low water were confined in a channel eighty feet wide at bottom and with side slopes of forty-five degrees at the shoal places, and the slope regulated by jetties or wing-dams, these quantities of water will be sufficient to give a depth of five feet, six feet, and seven feet at the points just mentioned.

In other words, there will be plenty of water if the width and slope are properly regulated, and this can be done by a suitable arrangement of brush and stone dams so disposed as to narrow the channel at low water and cause the gravel to scour to the proper depth at the shoals and form deposits in the deep places, where it will not only be out of the way but will assist in backing the water upon the shoal places.

To those not familiar with the subject it might appear that this would simply be a continuation of the improvement on the present plan, and to a certain extent it would be; but it should be remembered that the existing project has cost only $277,000 for the entire improvement from Nashville to the head of Smith's Shoals, or less than one-nineteenth of what it is now proposed to apply to the same portion of the river.

In order to compare the lock and dam system with the jetty system, which, by the way, is something like the original problem of improving the mouth of the Mississippi River minus most of its difficult and experimental features, Mr. Turrill was directed to make an estimate of the cost of improving the worst, or most difficult, and the most favorable sections of the river by jetties, with the following result:

Worst section: With locks, $180,951; without locks, $268,700.

Best section: With locks, $168,006; without locks, $121,300.

The cost with locks includes the cost of operating, capitalized as in the general estimate, and the figures show that in the worst section the locks would be about $88,000 cheaper, while in the best section they would cost $46,700 more than the jetties.

It should also be taken into account that the building of jetties will not interfere at any time with the free navigation of the river, while the dams can not be built without entirely stopping navigation for longer or shorter periods, according to the stage of water, floods, weather, appropriations, and other circumstances under which they are built.

In some cases it will evidently be better to build locks, while in others jetties will be more advantageous.

I would, therefore, respectfully recommend that if this improvement is undertaken by Congress the following provisions be made:

1. That the appropriation be made without geographical limit other than that it shall be applied to the "improvement of the Cumberland River above Nashville."

2. That, in order to conduct the work on business principles, the first appropriation should be enough to complete at least three locks and dams next above Nashville, say $400,000.

3. That the law shall simply specify the depth of navigable channel to be secured, leaving it to the Secretary of War to adopt the plan of improvement best adapted to the physical conditions of each section of the river. A depth of four feet, at ordinary low water, say eleven months in a year, would probably be sufficient for all purposes of navigation.

Mr. Turrill's report, giving details of the survey, estimates, and commercial statistics, is appended hereto. The maps will be forwarded when copied.

Respectfully submitted.

W. R. KING, *Major of Engineers.*

CHIEF OF ENGINEERS, *United States Army.*

Mr. Chairman, there is hardly an element of wealth found on any other river of this continent that is not found in the valley of the Cumberland River. The finest coal for domestic purposes in the country is there in abundance. If this improvement is made, coal can be delivered along the Cumberland to Nashville at less than 10 cents a bushel.

I have already mentioned the fertility of this valley. It will produce two crops of potatoes a year, and yet there are hundreds of miles where none of this crop can be sent abroad, for the reason that at the season for their sale there is no transportation. There is such a combination of agricultural capabilities in this valley as is not found in any other region I have ever seen. In Sumner and Wilson Counties there is a combination of blue-grass and cotton lands. In a radius of ten miles cotton may be found, cotton of a fine quality; pastures upon which have been produced some of the finest horses that have ever marked the American continent and finest cattle of the land; potatoes that find a ready sale in every market, both for seed and for the table, and growing two crops a year from the same land; corn, wheat, oats, and the grasses in the greatest abundance; and fruits and vegetables in the greatest luxuriance. All along the valley a population as industrious, intelligent, and honest as any in the world is found. They need only permanent transportation such as this amendment—this river improvement—contemplates to make their region second to no part of the great Mississippi Valley in thrift and wealth.

Sir, in support of what I say concerning the resources and products of this section I quote the following from the report of Captain Turrill, who made the survey. While it does not enumerate all the elements of wealth or give the full capacity of the country, it will shed some light on it:

RESOURCES OF THE UPPER CUMBERLAND.

The population of that portion of Kentucky and Tennessee drained by the Cumberland above Nashville is about 500,000. The resources of that portion of the valley above Burnside, Ky., have been described by Lieutenant Marshall, Corps of Engineers, Capt. W. C. Crozer, and others, in their reports of surveys in that vicinity. The development of that particular region would be greatly assisted by the improvement here recommended. After passing Smith's Shoals coal could be towed cheaply at all seasons of the river to Nashville and neighboring cities, where manufactures are on the increase.

Coal was formerly mined on the South Fork and taken down in barges, but of late years they have been unable to compete with other coal on account of uncertainty of transportation. This coal is said to possess fine coking qualities.

The coal mines at Poplar Mountain, Wayne County, Kentucky, were once profitably worked, the coal being brought six miles on a railroad to the river and carried down in barges by a towboat. The mines have not been worked for several years, though the supply is said to be abundant. Extensive deposits of coal also exist near the head of navigation of Obey's River.

Coil oil is frequently found on the banks of the Cumberland in Wayne, Clinton, and Cumberland Counties, Kentucky, and near the river in Putnam, Jackson, Overton, and Clay Counties, Tennessee. Experts give it as their opinion that this oil-field has a bright future, and only awaits cheap transportation. Timber of valuable quality is found in large quantities, principally oak, poplar, hickory, and walnut. Last year about 1,700 rafts were brought down to Nashville and some carried to the mouth of the Cumberland. These rafts sold for at least $500,000.

The river valley is generally well cultivated, and soil adapted to raising corn, wheat, rye, barley, tobacco, and other farm and garden products. There are grist-mills of large capacity at Mill Springs, Monticello, Burksville, Celina, and Hartsville, and large saw-mills at Burksville and Celina. In the thirteen counties through which the Cumberland passes from Burnside to Nashville there are about one hundred small grist and saw mills.

Twenty-five thousand bushels of coal were brought over Smith's Shoals last winter and sold at small towns lower down the river, none being brought lower than Carthage, Tenn.

An estimate of the business done by steamers during the season of 1882-'83, given in my report of operations during the last fiscal year, is as follows:

Articles carried (above Nashville).

	Approximate value.
Corn, 1,600,000 bushels	$800,000
Wheat, 300,000 bushels	300,000
Tobacco, 6,000 hogsheads	850,000
Potatoes, 35,000 barrels	50,000
Eggs, 80,000 dozen	1,000
Hogs, 5,000 head	60,000
Cattle, 2,400 head	60,000
Lumber, 1,000,000 feet, B. M. (sawed)	2,000,000

Miscellaneous freight, 2,500 tons.

Passengers carried, 20,000.

With reliable navigation, secured by locks and dams, the business would in ten years probably be four times as much per year.

This improvement is very much desired by those living along the river, if it is shown to be practicable. Sufficient money ought to be available in one season to push the work and not delay navigation. About six months of each year's work could be prosecuted above Nashville in the river channels, as no boats could run during that time.

In view of the possibility of some railroad company desiring to cross the Upper Cumberland in a few years, or sooner, those interested in navigation here very much desire that the control of the War Department over bridges on the Ohio and Mississippi be extended to this river.

Profile and maps will be forwarded to you as soon as finished.

Very respectfully, your obedient servant,

C. A. TURRILL, *Assistant Engineer.*

This, Mr. Chairman, is no mere creek in importance. It is a river which fills every requirement of the Constitution in that importance and magnitude which are required for Government aid. It has been recognized for years, and has been appropriated for ever since I have been in Congress. I have also succeeded in getting appropriations for its tributaries, the Caney Fork and Obey's Rivers, the former of which is not only appropriated for in this bill, but an additional survey therefor ordered. They possess the same geological formations and general topography and yield the same rich products found in such luxuriance in the valley of the main stream.

On the waters of Obey's River, in Clay and Overton Counties, has recently been discovered lithograph stone which is said to be equal to any in the world. This improvement would bring it to the markets of the world and save the large importations of that indispensable material. In addition to these things magnificent forests of the best timber cover all the Upper Cumberland region. The counties of Wilson, Sumner, Trousdale, Macon, Smith, De Kalb, Jackson, Clay, Putnam, Overton, Pickett, Fentress, Davidson, and all the valley in Kentucky would be vastly benefited by the improvement.

Sir, there are many other things that might be said in support of this appropriation, but my time being exhausted I will have to desist. I trust the amendment will be adopted, and the improvement of the Cumberland River by locks and dams, as recommended by the engineer in his last report, will be begun.

[Here the hammer fell.]

Rivers and Harbors.

SPEECH

OF

HON. JOHN D. WHITE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. WHITE, of Kentucky, said:

Mr. CHAIRMAN: We see the Democratic party to-day advocating a Republican measure. I desire to read, not so much for the information of gentlemen who know it already as by way of refreshing their memories, what the Republican party said in its national platform in 1880:

We esteem it the duty of Congress to develop and improve our water courses and harbors, but insist that further subsidies to private persons or corporations must cease.

I need not refer to the fact that the candidate of the Republican party in his letter of acceptance indorsed that doctrine and elaborated upon it. In the ten minutes which is allowed me I must hasten with my remarks.

I desire to have the Democratic party understand that this is Republican doctrine, which has come down to us through such men as Henry Clay and his followers. It is old Whig doctrine, handed down to us, their legitimate heirs. It is the doctrine of the Republican party, and never until this Congress has it been a part of the Democratic programme. I am glad to welcome gentlemen on that side of the House on this issue. I avail myself of this opportunity to say that I stand on the broad doctrine of the Constitution, that Congress shall have power to regulate commerce among the several States, backed up by the further clause that "the Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof."

I desire to call attention of gentlemen of this committee to the fact that the navigable streams of the country are national streams, and presumably bear upon their waters general commerce.

Mr. GEORGE D. WISE. Allow me to ask a question.

Mr. WHITE, of Kentucky. I decline to yield; I have only ten minutes.

Mr. GEORGE D. WISE. I want you to tell me——

Mr. WHITE, of Kentucky. I decline to yield. All this talk about national improvements and all this demagogism about local improvements vanishes in view of the decisions of the Supreme Court of the United States. We are this day confronted with this question, whether with the $7,000,000,000 invested in railroads the National Government will compel those railroads to do justice between the people in the several States who must use them? If the nation is to compel the railroads to do so, how will it do it—by an empty law, or by improving the natural highways so that the commerce of the nation shall travel on the natural water ways of the country so cheaply that these artificial carriers will be compelled to come to the rates and fares, especially the freight rates, of the cheap water ways?

It is clear to this committee, without any explanation on my part, that I am for liberal appropriations for rivers and harbors; not that I indorse this bill in all its particulars, but the general idea on which the bill is based, namely, that it is the duty of Congress to regulate commerce among the States; that it is the duty of Congress to take these railroad kings by the throat, not by means of a law, but by appropriating the people's money to improve the natural highways of the people's commerce.

I go further, however, and say that the navigation of the Mississippi River, so liberally appropriated for in this bill, is the least defensible of all the items enumerated in the bill. In the first place, there is no commerce on the Mississippi River which, without any appropriation, the bosom of that river can not abundantly carry. In the second place, the appropriations nominally for the improvement of the navigation of that river are really, I fear, for the improvement of private property.

Mr. BLANCHARD. Will the gentleman yield to me for a moment?

Mr. WHITE, of Kentucky. I do not yield; I can not in the ten minutes allowed me.

I observed the remarks of the chairman of the committee [Mr. WILLIS] reporting this bill as he glided over the question of the constitutionality of appropriations of this character. I want the Democratic party under his leadership, or any other leadership on this floor, to go squarely before the American people and answer these questions: "Are you in favor of this bill simply because you feel that there has been a pressure brought to bear on members on all sides of this House in its favor?" "Are you for this bill simply because you believe there is a log-rolling scheme here which can put it through, as the President accused the last Congress of doing?" "Are you for this bill on any such ground as that?" Do you believe that the doctrine of the President, enunciated in his veto message of the first river and harbor bill of the Forty-seventh Congress, can be defended before the country? If you do, then I want you to understand that every vote that you give for this bill is as indefensible as any vote that was given for the bill of the first session of the Forty-seventh Congress.

I plant myself squarely on this position, that the American people believe it to be a constitutional duty on our part to appropriate money to improve the rivers of this country, because that is the only way in which you can regulate commerce among the States. The distinguished gentleman from Texas [Mr. REAGAN] has for years been attempting to get Congress to regulate commerce among the States by legislation. That is a utopian idea—utterly impracticable.

This is the only way in which to do it, by improving nature's highways. Does the distinguished gentleman who is chairman of the Committee on Rivers and Harbors, when he glides over with a mere wave of his hand the constitutional question upon a matter which your side of the House and your party from the days of Jackson down to the present have declared unconstitutional—does he mean to dodge that issue?

And this bill is going to pass. Does your side mean to say that the Democratic party has abandoned its old position of State rights and internal improvement by the States; and is the country to understand that you have gone over to the Republican doctrine which we inherited from the old Whigs, to wit, that the Congress of the United States, as in former days it built a turnpike road and a light-house, can at this period of our national greatness improve every water way in this country? Where are you going to draw the line now? If the Mississippi River is an important national water way, are you going to improve its navigation and leave out the Ohio because the Ohio lies for the most part within the State of Kentucky? Or will you refuse to appropriate any money to improve the Kentucky or the Licking River simply because they lie wholly within the State of Kentucky?

Sir, there is no half-way ground on this question. Every navigable stream within the United States is a national stream and should be free to general commerce. The American people expect and demand that Congress will make adequate appropriations to improve our water courses and harbors.

Improvement of the Mississippi River.

SPEECH

OF

HON. JOHN J. O'NEILL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 11, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. O'NEILL, of Missouri, said:

Mr. CHAIRMAN: I submit the following amendment:

Strike out, in line 779, "$520,000" and insert "$1,000,000."

Mr. Chairman, in asking this House to increase the appropriation for the improvement of the Mississippi River between Saint Louis and Cairo to $1,000,000 I am carrying out the desire of the engineers in charge of the work, who believe that this amount can be used to advantage during this year and who have recommended such an appropriation. I earnestly appeal to members for their attention, as I find a disposition prevailing to reject all amendments, no matter how meritorious or how necessary, and to pass this bill just as it has been reported from the committee; a disposition arising, I am certain, from the fear of the possible defeat of an excessive bill. They should, however, bear in mind that it is not the amount but the incorporation of improper features that brings river and harbor bills into disrepute.

The injudicious appropriation of money for unworthy objects by the last Congress brought a similar bill under general condemnation, of which fact our committee appears to have been conscious, for I see that all creeks and bogus rivers have been carefully eliminated from this bill. While this is commendable from an economic standpoint, are we not committing a greater wrong by going to the other extreme in refusing to make sufficient appropriations to insure the speedy completion of river improvements now fairly inaugurated, and the early completion of which will afford such great benefits to our commercial interests in the saving of vast sums of money to our producers?

If this House were fully conscious of this and knew that the system which had been inaugurated is no longer an experiment, but has been

demonstrated to be the true method for affording relief and had in every instance resulted in permanently deepening the channel, in removing shoals and bars, and in preventing caving banks, thereby affording every guarantee for an unvexed deep-water way to the sea, I feel confident that a more liberal spirit would prevail and larger appropriations would be given, so that this work can be speedily completed, and that within a few years our people may be able to enjoy the benefits and blessings that will arise from it.

The commerce of the valley of the Mississippi River and its navigable tributaries, embracing over one and a half million square miles and comprising nearly 30,000,000 of our people, demands in the way of cheap transportation immediate relief to permit successful competition with the products of India, Russia, and South America in foreign markets.

The countries of Europe which do not produce sufficient wheat for home consumption are compelled to import 356,000,000 bushels. The countries of supply yield for export as follows:

	Bushels.
Russia	74,000,000
Other European countries	36,000,000
India	30,000,000
Other countries	47,000,000
Total	187,000,000

Leaving for the United States to supply 169,000,000 bushels.

Of corn, the countries importing require about 125,000,000 bushels, while those exporting supply only 56,000,000 bushels; leaving 69,000,000 to be supplied by the United States.

The production of grain in the Mississippi Valley in excess of the demands for home consumption has increased marvelously—the shipments from Saint Louis alone to New Orleans having increased from 300,000 bushels in 1871 to nearly 12,000,000 bushels in 1883.

The cost of shipping grain by river in 1883 during the months of January and February, when navigation was almost suspended, was 25 cents per bushel, while in May and June, when there was ample water in the channel, the cost fell to 16½ cents per bushel. The Mississippi Valley Transportation Company have barges that can carry 56,000 bushels and make the trip to New Orleans in six and a half days with a nine-foot stage of water, while with a five-foot stage they can only carry 20,000 bushels, and the trip requires about nineteen days. It is estimated that it costs 6 cents per bushel more to transport grain during low water, and that the rate of freight from Saint Louis to New Orleans could be reduced to 4 cents per bushel provided a stage of nine feet of water could be maintained in the river.

If we realize the enormous tribute that is annually levied on our producers in the cost of transportation, we can not but appreciate the importance of improving our rivers and cheapening the cost of sending our grain to the sea, especially in view of the fact that we must compete against India, where labor commands but 11 cents a day and which last year produced 270,000,000 bushels of grain.

The next question to consider is the feasibility of improving the river so as to furnish a permanent deep-water channel to the Gulf, and I realize that many members are still under the impression that the work is experimental, that no permanent good results can be accomplished, and that all moneys so expended are squandered. If they vote for this bill it will be owing more to the presence in this bill of appropriations to be used in their own districts than from a belief in the efficacy of river improvement. To such members I desire to submit a brief sketch of what has been thus far accomplished in that direction.

On the Upper Mississippi work has been carried on only at those points where navigation was most impeded, and has afforded substantial relief. The select committee from the Senate which visited the various points in the river reported the following increase in depth of channel at low water: From Saint Paul to Saint Croix River, formerly 15 inches, now 4½ feet; North Saint Croix River to Chippewa River, formerly 30 inches, now 6 to 9 feet. Bar one hundred and twenty miles below Saint Paul, formerly 30 inches, now 6 feet. Bar above Winona, formerly 32 inches, now 6 feet. A long list of successful treatment of many bars, sloughs, and crossings gives ample evidence that the money appropriated has been wisely expended.

Between Saint Louis and Cairo the work has been principally below the city, and so far only extends to Bushburg, twenty-six miles below the city, it being the policy of the commission to make the work continuous. The uniting of Arsenal Island with the Illinois shore has resulted in permanently deepening the channel sufficiently for all needs of navigation. At Horsetail Bar, a few miles below Saint Louis, the channel was formerly narrow and tortuous, with a depth of but 3½ feet in low water; it is now direct and wide, with a depth of 8½ feet at low water.

The works below Cairo consist in seeking to increase the navigable depth at low water by narrowing the width at that stage to about 3,000 feet, it being found that where this width is exceeded bad navigation as a rule exists. Recourse is had to light, permeable structures erected in the river bed and designed, by checking the velocity of the current, to induce deposits of sediment on those portions which it is proposed to reclaim from the river.

By this action it is expected that these deposits will ultimately be raised to the level of the normal banks. When this is done the river will have a nearly uniform width, and the tendency to form shoals in the wide places will be done away with, and at the same time the concentrated flow thus set up will scour down the bed, remove the shoals, and ultimately lower the flood-line.

To prevent the constant bank erosion now going on, both the old banks and the new ones, where exposed to this action, are protected by brush mattresses below the low-water line, and above that point by brush or stone or the natural vegetation.

The principle of contracting the water way to secure increased depth is in no sense experimental, but has been successfully carried out on many streams in this country and abroad.

The special methods proposed have also passed beyond the experimental stage; they have received practical tests at various points on the Mississippi and Missouri Rivers, and recent work done by the commission shows their correctness. They are only applicable to silt-bearing streams.

There has been ample testimony furnished this House of the success of the works at Plum Point and Providence reach, and it is not necessary for me to pursue the subject further.

With such indisputable proofs I trust no further doubts remain as to the beneficial results of this work. It only remains to provide ample means to insure the speedy completion of the entire work. The engineers in charge of the work estimate that it will cost ten or twelve million dollars and require ten years to complete the work from Saint Louis to Cairo. Will not your reduction of the estimates necessarily prolong the time for its completion and almost hopelessly defer the hopes of those who now appeal for relief? Would it not be far wiser to increase the appropriations and provide for a division of the work by doubling or trebling the plants and starting the work at new points? The ultimate cost would not be greater, and the benefits would be soon experienced, for while the improvement of other portions of the river may be completed, no great relief can be experienced, as boats can only load to the depth of water afforded by the shoalest bar.

With the earnest hope that a broad and liberal spirit will animate this House in dealing with this question of such vital importance to our commercial welfare, I submit the amendment and hope for its adoption.

Public Building at Pittsburgh, Pa.

SPEECH

OF

HON. ALBERT S. WILLIS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 10, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 1339) to increase the appropriation for the erection of the public building at Pittsburgh, Pa.—

Mr. WILLIS said:

Mr. CHAIRMAN: I respectfully ask the attention of the House for a few minutes. I am in favor of this building at Pittsburgh. I have been in favor of all the public buildings reported by this committee. I regret time does not permit me to show the reason therefor. I will later in the day show why I am in favor of these appropriations.

I have for three years conscientiously and faithfully, I hope, examined this question, and I am prepared to show by the official reports that the amount of rental paid by this Government would more than justify ten times the amount appropriated in these bills. But I have not time at present to refer to those considerations.

I desire to say, with the consent of the gentleman in charge of this bill [Mr. HOPKINS] and with the consent of the Committee on Public Buildings and Grounds—and without their consent I would not do it—I propose to amend this bill by inserting the city of Louisville on the same footing, asking no appropriation, but simply extending the limit of appropriation. If the committee will hear me for three minutes I will state the reason why. The Louisville bill three years ago was the first bill reported by the Committee on Public Buildings and Grounds. At that time the committee had not adopted the clause requiring plans and contracts to be made out in advance. It was not therefore a question of importance what the amount was. The committee recognized the national importance of this improvement, and declared a public building should be located at Louisville, with a population of 175,000 people, but when the architect was asked he declined to make out the plans, because he said on the present limit as a public officer he would not be discharging his duty if he made out plans in accordance with the amount fixed by the former act. Therefore he asked Congress should direct him before he proceeded further with this building. Not a lick of work has been done. The site has been purchased, but the plans have not been made out for the reason I have indicated.

Mr. Chairman, I have taken every city in the United States; I have prepared in one column their population; in another column I have given the amount of public business transacted at those places, confining it to internal revenue, customs, and the postal service; in a fourth column I have given the amount expended by the Government heretofore, and in a fifth column by the rule of three I have made a calculation of what the city of Louisville would be entitled to provided she received a public building corresponding to the average allowed for public buildings in one hundred and four cities in the United States where public buildings are located. I desire to state to this committee the result of that examination. I have asked a number of gentlemen to state the result, and some have said $1,000,000 and some $2,000,000. I say to this committee, not upon guess but upon the record, the official records of this country, if the city of Louisville were given a public building precisely as the city of Pittsburgh is entitled to it, they would have a public building equal in value to $162,310,000. If that be the average, and I state it upon cold calculation, certainly the amount we ask here is not too much.

Introductory Statements and Remarks in Advocacy of the Passage of Bills to Reduce, Fix, and Establish Passenger and Freight Fares on the Union Pacific and Central Pacific Railroads.

SPEECH

OF

HON. CHARLES A. SUMNER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 19, 1884.

The House having under consideration the bill (H. R. 5442) to amend an act entitled "An act to amend an act entitled 'An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes,' approved July 1, 1862," approved July 2, 1864—

Mr. SUMNER, of California, said:

Mr. SPEAKER: My friend the honorable gentleman from Nevada, chairman of the Committee on Pacific Railroads [Mr. CASSIDY], has informed me with great emphasis during the progress of this debate that if it is desirable that such bills as I have introduced, cutting down the passenger and freight fares of the Union and Central Pacific Railroads, should pass, the bill now under first consideration, reported by the majority of his committee, should be defeated, and a bill which he and others of the minority have recommended—prescribing method and dates for repayment of the bonded indebtedness of these Pacific roads to the United States—should be favorably acted upon by this House. He declares that the bill presented by the majority of the committee can not for reasons stated pass the Senate, and that its consideration and passage here will prove a waste of time and energy. I understand him to concede that such legislation as I have proposed should be had; and when asked by my honored colleague [Mr. BUDD] as to why he had not reported my bills from his committee before this day, he makes no objection to them, but asserts that the time of the committee has been so occupied by the deliberations upon the bond-debt measure and other matters that it was impossible to duly examine and discuss and deliver here the legislative propositions referred to.

When the question is repeated, and the chairman of the Pacific Railroads Committee is hard pressed by my faithful and tenacious colleague for a direct and satisfactory reply, the distinguished gentleman from Nevada seems to be irritated by the reiteration, then saying, as I understood him, that the immediately pending subject of legislation, to wit, the subject of amendment to the Thurman act, had precedence in introduction and reference. In this statement I am confident he is mistaken. It is true that my passenger-fare bill, which was introduced on the first bill day of this session, through the interposing of the gentleman from Texas [Mr. REAGAN], was misdirected to the Committee on Commerce. It was rereferred some time in the month of February following, finally going where it belonged. But my bill providing for the reduction of freight fares on the Pacific railroads was sent direct to the proper committee, January 7, 1884, ten days before the bill to amend the Thurman act was introduced. And attention was first paid to my propositions by the Pacific Railroad Committee's hearing, in opposition, the attorneys for the Pacific railroads, extending through many hours, and by a comparatively brief audience vouchsafed to myself. So that, by priority of presentation and argument, if for no other reason, we should now have before this House from this committee a report of some kind with respect to the bills that provide for reducing the passenger and freight fares on the one continuous line of railway chartered and endowed by the acts of July 1, 1862, and July 2, 1864.

There can be no question in the mind of any intelligent, reflecting, and disinterested citizen but that bills of the nature last referred to have, on grounds of right and justice, and immediate necessity and popular wish as well, to say nothing of the order in which they are on the record here—which has been erroneously stated—precedence and prominence for a due and favorable regard by legislators at this first session of the Forty-eighth Congress.

I agree with my friend from Nevada that under the circumstances which he narrates, if they be as stated, it seems altogether improbable that this bill—reported here by the majority—in behalf of which there is a parade of anti-monopoly sentiment, which to say the least would have infinitely greater application in support of the character of measures to which I have alluded and to which I have claimed a preference in time and toil of consideration—I say that I agree with my friend in believing that it is unlikely that this majority bill will ever pass the Senate; but I go further, and deny that it is of instant importance that this subject of proposed amendment should be treated; and for my part I can not but view both these bills—speaking with the greatest personal respect for the members of the Pacific Railroads Committee—as obstacles in the path of the legislation that is most wisely desired and most imperatively demanded by the people of the Pacific States and the inhabitants of the country everywhere who are equally well informed with us of California as to the ways and workings of the railroad monopoly management.

Mr. Speaker, it is probable that there are very few members of this House who can not recollect the time when the "Great American Desert" was the popular Peter Parley's Geography name and designation of that portion of the continent lying between the Rocky Mountains and the Sierra Nevada range, and in fact embracing a portion of the territory we now know to be covered with the verdure and the forests of the mountain slopes—all that section bounded on the north and south, respectively, by the forty-second and thirty-fourth degrees of latitude. In H. S. Tanner's Mammoth Atlas, issued in 1823, and praised in its day for its new information and its general accuracy, the space between the lines of latitude just stated, and from longitude 30° to 40°, was represented by that pale and sickly color which indicates the herbless barrenness of sandy desolation. Yet even then, when California was almost as much of a terra incognita as the interior of Australia—even then we were accustomed to hear the prophecy that at some future day the mountains would be scaled and the belt of waste land would be traversed by the iron horse until "it bathed its feet in the waters of the Pacific." Some of the venturous in this class of predictions put their foretelling upon record, and of this number two or three have acquired a little passing newspaper notoriety by reviving and authenticating their early predictions.

Somewhat by way of contrast stand the objections that were made by a few of our distinguished forefathers and statesmen of the first generation—men who objected to the acceptance of the "extreme portions" of the Northwestern Territory, who would have had them formally "abandoned," and to the purchase of Louisiana, on the ground that people inhabiting those sections, by reason of their comparative greater distance from the Atlantic seaboard and from the national capital, could not be brought into homogeneous relations with the people residing in what were considered the already settled Commonwealths of the Republic.

Such glances are calculated to remind and instruct us with respect to the progress, through quick transportation, in political and social unifying and harmonizing, of peoples dwelling thousands of miles apart on the same continent, but now claiming and boasting loyalty to the same flag and proprietary rights and privileges under the same national governmental institutions.

How has the fulfillment of the prophecy come to pass? To whom are we indebted for it? Is there a false claim in the premises? And is there and has there been a strenuous endeavor to make literally working capital against conscience and right, by assuming that the origin of thought and enterprise in the premises was in the minds of a few monopolizing railroad incorporators? Under any view of the steps which have led up to the great uniting act of construction, have the people, has the Government, acquired or lost rights of superintendence or control with respect to the all-important subject of transcontinental carriage?

I shall try to present a practical answer to these questions; and in this response there may exist substantial and indestructible foundation—at the very bottom of the whole matter—for the demand which the people of California, who are thoroughly enlightened and aroused on the issue, present through me for Congressional action that shall reduce and fix the passenger and freight fares on the Union Pacific, Central Pacific, and Southern Pacific Railroads, which were constructed under the subsidizing acts of 1862 and 1864 and 1871.

No sooner had the discovery of gold in California been announced and the first great tide of immigration poured into the Pacific territory than a formal appeal was started and with ever-increasing volume of signature and argument was continued for the construction of a transcontinental railroad by the General Government. The distinguished statesmen who by a little space had anticipated this appeal gathered a limited audience, and what now seem to us words of stirring import fell upon listless ears. The majority in the great legislative council

here who paid any attention to such words seem to have manifested nothing better in their most complacent mood than the interest of amusement. The recorded conversations of many show that they treated the first open declamation here in behalf of the project as one unworthy of serious or even respectful consideration.

But the pioneers of the far West, especially the members of that splendid "argonaut" immigration of 1849, soon put another face upon the derided enterprise. By their detail of accurate statement with respect to the nature of the country that was to be traversed they dissipated a thousand fabulous stories that had contributed to the belief that the Rocky Mountains and the central basin were "almost impassable" by the iron horse; and so early as 1851 it was definitely known that a route for railroad construction across the Sierra Nevadas by the Feather River Pass was on all accounts entirely practicable. The wonderful yield of the mines in the new State on the western side of the Sierra Nevadas (a production which was long afterward to be referred to by Abraham Lincoln in a special personal message delivered by Mr. Colfax to the people of the Pacific coast as a main element of strength for the saving of the Union) gave a dignity and importance to the demand for the building of the railway across the continent such as could not well be disregarded or set aside. The nation had become possessed of wealth of which it never dreamed when the treaty of Guadalupe Hidalgo was signed; and this treasure land of the Republic it was conceded ought to be and somehow must be secured against the rapacity of foreign or domestic foes.

The antagonism which had grown up in the Democratic party against internal improvements inaugurated or fostered by Government aid was believed by some to be an insurmountable obstacle in the path of the Government action that was so earnestly desired. The instance however, is not on any public record of a Californian declining to sign a petition to Congress for the building of this road on account of scruples with respect to the strict construction of the Constitution.

Leaving out of consideration all social and private business interests—which were by no means insignificant in their bearings or operations with respect to this subject—as a war measure a Pacific railroad act of some sort was justified from every quarter with practical unanimity.

Not only were petitions widely and repeatedly circulated throughout the State of California praying for the passage of a railroad act—most of them asking specifically for the enactment of a law under which the Government would directly undertake the work of transcontinental railway construction—but the Legislature of California gave voice to the universal desire and demand. So early as the 10th of September, 1850, joint resolutions were passed at San José, then the capital of our State, which instructed our Senators and requested our Representatives to urge upon Congress the importance of authorizing as soon as practicable "the construction of a national railroad from the Pacific Ocean to the Missouri River." The succeeding resolution, which called upon the National Government "to facilitate the accomplishment of the great work contemplated in the first resolution" by "the immediate organization of an efficient engineer corps to make complete surveys and exploration of the several routes which have been recommended to public notice as practicable for the line of said road," was promptly responded to by favorable action on the part of the National Legislature.

"Pacific railroad conventions" were held in our State, one of the most important of which I had the pleasure of attending in person. Such men as John Bidwell of Chico, J. B. Crockett of Alameda, James A. McDougall of San Francisco—who subsequently was numbered among the ablest and brightest members of the United States Senate—and General Lander were conspicuous and influential members of the assemblage to which I refer. There and at that time nothing was heard from, or in any way officially known of, the Pacific railroad incorporators (unless an exception should be made here to the honor of Theodore P. Judah) who subsequently reaped such vast pecuniary rewards from engaging in the enterprise of building the continuous line on the central route.

Said our great historian, George Bancroft, in his address of review and congratulation delivered in this Chamber after the close of the civil war, speaking with most apt, plain, and epigrammatic force—incidentally administering fit rebuke to those who would idolize any one of our military chieftains—"The American people was the hero of the war." With far greater and more pungent sentiment would such a man reject and spurn the claim of credit that monopoly masters have had put forth to the benefit of their associates and for the especial exaltation of themselves, and with unmistakable purpose to beat aside any suggestion of legislative action in the manner and path already indicated.

Neither Oakes Ames nor Leland Stanford nor Charles Crocker nor C. P. Huntington nor Jay Gould had anything whatever to do with originating that public sentiment which (before the reign of the Western Union Telegraph Company had been inaugurated, and when it was therefore possible that there should be a true national, undebauched public sentiment on a great public question) brought into existence and unto a final passage and approval Congressional measures designed to secure the construction of the one continuous railway line from the Missouri River to the Pacific Ocean. Yet some of these men, by themselves or by those representing them, stand at the threshold of our legislative halls and cry "All hail!" and "All honor!" for themselves and their predecessors—to create a tide or a tumult destructive of the effect of the very first utterance of appeal on behalf of the people of this country, who, under the express warrant and authority of the chartering and subsidizing statutes, now speak and write their requests and demands to us.

The Democratic national convention which assembled at Baltimore in 1856 reaffirmed the resolutions of the national convention of 1852, and added eleven resolutions, in two series, from which I take the following:

Fifth. *Resolved*, That the Democratic party recognize the great importance, in a political and commercial point of view, of a safe and speedy communication, within our own Territory, between the Atlantic and Pacific coasts of this nation; and it is the duty of the Federal Government to exercise promptly all its constitutional powers for the attainment of that object.

The following is from the Republican national platform of 1856:

Resolved, That a railroad to the Pacific Ocean, by the most central and practicable route, is imperatively demanded by the interests of the whole country, and that the Federal Government ought to render immediate and efficient aid in its construction, and, as an auxiliary thereto, the immediate construction of an emigrant route on the line of the railroad.

During the Presidential campaign of 1856, James Buchanan, the Democratic candidate for Chief Executive, wrote a letter to Benjamin F. Washington, of San Francisco, in which he said:

I have received numerous communications from sources in California entitled to high regard in reference to the proposed Pacific railroad. As it would be impossible for me to answer them all, I deem it most proper and respectful to address you a general answer in your official capacity [chairman of Democratic State central committee]. In performing this duty to the citizens of California I act in perfect consistency with the self-imposed restriction contained in my letter accepting the nomination for the Presidency, not to answer interrogations raising new and different issues from those presented by the Cincinnati convention, because that convention has itself adopted a resolution in favor of this great work.

I then desire to state briefly that, concurring with the convention, I am decidedly favorable to the construction of the Pacific Railroad, and I derive the authority to do this, from the constitutional power "to declare war" and the constitutional duty "to repel invasions." In my judgment Congress possesses the same power to make appropriations for the construction of this road, strictly for the purpose of national defense, that they have to erect fortifications at the mouth of the harbor of San Francisco. Indeed, the necessity, with a view to repel foreign invasion from California, is as great in the one case as in the other. Neither will there be danger from the precedent, for it is almost impossible to conceive that any case attended by such extraordinary and unprecedented circumstances can ever again occur in our history.

The direct and positive terms here used by Mr. Buchanan were often the subject of comment when the alleged "inexpediency" of building the road by the direct agency of the Government was brought into official prominence and recommendation by executive messages and convention resolutions.

I read from the national platform of the Breckinridge wing of the Democratic party, adopted in 1860:

Whereas one of the greatest necessities of the day, in a political, commercial, postal, and military point of view, is a speedy communication between the Pacific and Atlantic coasts: Therefore,

Be it resolved, That the Democratic party do hereby pledge themselves to use every means in their power to secure the passage of some bill, to the extent of the constitutional authority of Congress, for the construction of a Pacific railroad from the Mississippi River to the Pacific Ocean, at the earliest practicable moment.

Here is the fourth resolution of the national platform of the Douglas wing of the Democratic party of 1860:

Resolved, That one of the necessities of the age in a military, commercial, and postal point of view is speedy communication between the Atlantic and Pacific States; and the Democratic party pledge such constitutional government aid as will insure the construction of a railroad to the Pacific coast at the earliest practicable period.

Here is the Pacific railroad plank of the Republican platform of 1860:

That a railroad to the Pacific Ocean is imperatively demanded by the interest of the whole country; that the Federal Government ought to render immediate and efficient aid in its construction; and that as preliminary thereto a daily over-land mail should be promptly established.

So it came to pass that by a double emphasis of what was known as the "war argument" the Congress of the United States in 1862 passed the original Pacific railroad act. That Congress, then under the control of the Republican party, made a tardy fulfillment of the pledges given by the Democratic and Republican parties in 1856, its action being warranted and compelled by every consideration that could spring out of the possible and the actual exigency of national self-defense.

We have already had to deplore the misfortune—a comprehensive and not uncharitable word at this time—consequent upon the failure of the General Government to retain its hold upon telegraphic facilities for correspondence, so unwisely, with an almost criminal folly, relinquished and turned over to private hands. With a similar sentiment, though I grant you with far less bitterness, we must mourn the fact that when Congress came to the consideration of the construction of the Pacific railway it fell short in action—I must say in duty—of the line of requirement fixed by most of the petitions which during many years had been placed upon its tables. And instead of authorizing and directing the construction of the railway from the Missouri River to the Pacific Ocean in accordance with plans and specifications presented by its own engineers, paying for the work day by day or month by month out of the national Treasury, retaining exclusive ownership and control, it proceeded to incorporate and subsidize a private company, and to admit into a through line partnership with its own direct creation a

corporation organized under the laws of the State of California and designated and known as the Central Pacific Railroad Company.

Private citizens took advantage of the rising and resistless demand for Congressional action with respect to this project, and came here with a request which, alas, was acceded to; and so it is that instead of having a national highway under national proprietorship, we have a transcontinental highway the cost of which was met by the issue of Government bonds and the grant of Government lands, but which is owned and managed by the most soulless and greedy and grasping railroad autocrats and speculators that were ever endowed and enthroned on the face of the earth. And instead of a people's road, constructed under the direction of the people's servants, with the people's money, affording the people means of intercommunication for transportation at reasonable rates, we have a line which for these fifteen years has given to the people and to the world generally the grossest manifestation of oppressive, of grinding and corrupting monopoly.

Of course it was often reiterated when the bill was under discussion in 1862 that the construction of this road, to wit, the building of the one continuous line from the Missouri River to the Pacific Ocean, would save California to the Union. As a war measure, I repeat, the bill was passed and approved. As a matter of fact—as the date of construction demonstrated—it did not "save California to the Union." The people of California themselves determined to remain in the Union, and under the circumstances it was proven that they were competent to maintain that resolution. But the passage of that bill was a war measure, as the term stands justified in the light of subsequent events, but not a war measure in the sense intended by the men in the Congresses of 1862 and 1864 who advocated the passage of the Pacific railroad acts. This is not stated for an idle play upon words, but a most grave and serious and lamentable truth is thus proclaimed. The bills under which this road was constructed have enabled a certain number of men in private life to get into power, where they have made a raid upon the Treasury of the United States and upon the land legacies of the American Government, and a direct, remorseless, and crushing war upon the people of the Pacific coast.

Better that that line of railroad had never been built under the auspices and with the management that history now declares than that we should have the record and the results, elsewhere and here, which we must recite if we go into the detail of the narrative that belongs to this subject.

If the Government had undertaken this enterprise personally, work would have been commenced on this as well as on the California end of the path as early as 1862. But the original bill did not give enough to satisfy the appetite of the incorporators; and the supplementary and amendatory act of 1864, which vastly increased the subsidy and otherwise enhanced the value of the franchise, was enacted under a pressure not from the people generally but from the leading and active men connected with the organizations to which I have referred. And since then, and perchance now, in person or by their attorneys and insolent lobbyists, these men or their assignees have the effrontery to come here and go elsewhere and claim that the American people owe to them—yes, literally owe to them—the beneficent existence of the transcontinental railway from the Missouri River to the Pacific Ocean. And, indeed, if you should hear some of these men talk, or listen to the fulsome eulogies of some of their fawning flunkies, who have been engaged for years in "editing" their newspapers or in corrupting legislators and judges in the interests of these monopolists, you would think that every facility we possess in California in the way of transportation beyond the slow drag of the stage-team and the very limited comfort—limited because of the shortness of our water navigation—of the steamboat, was due to the leading speculators connected with the Union Pacific and the Central Pacific Railroad Companies. Why, Mr. Chairman, these men did not invent steam. A benignant Creator—with reverential awe and gratitude may it be said—"invented" steam. They did not discover the expansive force of the vapor that is set free from the water in the kettle, and that propels with tremendous energy the piston-rod up and down the cylinder. They never invented a locomotive. There is not one among them that has got the mechanical capacity to discover or invent anything above the grade of a fourth-class mouse-trap.

But I can tell you, and it is my business here to tell this House and the country, and it is pertinent to the subjects that this House should consider at this time, what these men have done. They have invented something. They did not obtain the passage of the original Pacific railroad act in the sense of having been first and last instrumental in securing the enactment of a law which would result in the building of a Pacific railroad. The general public sentiment already referred to was the great and the sufficient impetus for the securing of the passage of such a measure. But with respect to the form which that bill took, in some particulars they did exercise a formidable and a most deplorable influence; and with respect to the amendatory law of 1864 they are to be credited with the prevailing if not the exclusive force of appeal and suggestion and inducement. I can tell you what they did, what they have done, what they are doing, what they purpose to do. I can but touch their achievements, but I hope my time will be adequate to sketch the record, and here and there to dwell for a few minutes upon the circumstances of conspiracy and plot.

Some things we can indicate comprehensively and best fasten in the memory of the hearer by contrast. They began by appealing to the Congress of the United States to pass a law giving them a franchise, instead of passing a law which the people desired and expected, to wit, a direct law for governmental construction, ownership, and control. They began by soliciting additional legislation; they now desire no more statutory action; they want to be let alone. For years they and their emissaries and lobbyists of various name and grade stood about these Chambers and sat in committee-rooms and brought appliances of every conceivable corrupt form to bear to procure additional gifts and financial advantages from the General Government. To-day they sit in their offices or in their palaces, or in their seats of palatial luxury elsewhere, and issue their mandates to their subordinates to prevent legislation that shall be in any sense redeeming and reformatory against their methods of unequaled extortion and tyranny as business men. And that there may be no mistake as to what I mean by this and no question as to the truthfulness of my statement or accusation, I send up to the Clerk's desk for reading a letter written by Colin P. Huntington, one of the directors of the Central Pacific Railroad Company—who indeed need not be identified here—dated New York, January 4, 1875.

Will the Clerk please read?

FRIEND COLTON: I have ordered all bills introduced in Congress to be sent to Sanderson, that have any bearing on our interests. Please look them over and give me your views. Many bills no doubt, like Senate bill No. 50, will be introduced that are bad, and the only way to kill them will be in committee.

Yours, truly,

C. P. HUNTINGTON.

I will now ask the Clerk to read Senate bill No. 50, so that there can be immediate, full understanding and no mistake as to the character of measures which, by order of C. P. Huntington and his agents, it was and is the monopoly's purpose to smother in committees in the House of Congress, where it was or is possible to do so by means of corrupt manipulations with weak or wicked committeemen.

A bill (S. 50) to amend the act entitled "An act to amend an act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 2, 1864.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 21 of the act to amend the act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 2, 1864, be amended by adding thereto the following: *Provided, however*, That the neglect of any such company or parties in interest to pay the cost of such survey, selecting, and conveying, as herein provided, and take the patents therefor, shall not prevent the legal title vesting in said company or party in interest, subject to the payment of such costs; and all lands so earned and to which said company or party in interest shall be entitled, in accordance with the provisions of this act, or of the act to which this is amendatory, shall be subject to all legal taxes imposed under authority of any State or Territory in which such lands are located from the time such company or party in interest shall have been or may be entitled to a conveyance thereof, the same as though no costs or fees had been imposed by the provisions of this section; and upon the sale of any such lands for taxes so assessed which may be found delinquent, the purchaser thereof shall pay to the proper officer all costs due thereon, as herein provided; and thereupon letters-patent shall issue to such company conveying said lands, subject to the legal rights and title of the tax-sale purchaser; and that it shall be the duty of the Commissioner of the General Land Office to prepare and deliver, without delay, patents for all lands applied for by any company as aforesaid where the same are clearly within the grant and free from conflicting claims, and all legal fees and charges have been paid by said company; that if any company shall fail to pay the proper costs or fees required by law, and to select for patent the lands pertaining to its grant within such period as to enable the local authorities to assess said lands, lists of the same shall be furnished to the governor of any State or Territory, upon application to the Commissioner of the General Land Office and payment of the cost of preparing the same; said lists to be duly certified by the Commissioner and approved by the Secretary of the Interior, under seal of their respective offices: *Provided, however*, That nothing in this act shall be construed to relieve any railroad company from the effect of any forfeiture heretofore suffered or incurred.

Mr. Speaker, it will be observed that this is such a bill as we have had under consideration at this session—in effect. Has it been "killed in committee" these nine years last past—this wholesome bill to compel these railroad companies to pay "all legal taxes imposed under authority of any State or Territory" on their located lands? Has it been held nine years—in Congressional committee?

Mr. Chairman, is any listener startled by the statement—or amused by it—that it were better that this transcontinental railway had not been constructed at the time or so early as it was built, than to have had the record and the results which have attended it? Let him give me his indulgent hearing while I outline a portion of this record and the results.

On the Pacific coast and hitherward to the northern borders of the waters of the Great Salt Lake, who did the actual manual work upon the road-bed? The white man? The black man? Members of a race capable of civilization according to our understanding of that term in all its bearings? No. Up to 1862 the number of Chinese in California did not exceed 40,000 all told. And while it is true that the sagacity of our people had already been evinced in taking alarm at the incoming of the Asiatic slaves, their appearance in our midst was comparatively inconsiderable and not such as to provoke widespread and general apprehension. The Central Pacific Railroad Company, instead of employing white men to do the labor of this construction, which was to be paid for presumably by the sale of bonds loaned by the United

States, imported Mongolians by the ship-load. And there along the line of the selected route they sent them forth, paying them the low wages which they were willing to receive, and so directly trebling that class of population on the Pacific coast. Do you say that if it had not been for the Chinese the Central Pacific Railroad would not have been constructed? I beg you to consider my reply: if it had not been for the introduction of the Chinese laborer under the circumstances noted the completion of the transcontinental highway might have been delayed one, two, or perhaps so many as three years; but there would thereby have been avoided great moral and what may be termed industrial evil; by the substitution of white labor there would have been a vast amount of moral and material well-being for our State and for Nevada such as can in contrast and comparison hardly be overestimated.

In this respect the Union Pacific Railroad management has of course a greatly preferable record. Nor can this be denied or qualified because there were attendant upon the pushing out of the iron track and the temporary establishment of new termini—construction and passenger—scenes of turbulence and debauchery which are inseparable from such conditions, and have been so the world over.

If the General Government had directly undertaken and proceeded with this construction there would have been no such great and wholesale importation of Asiatic slaves into this country; but on the contrary California and the other Pacific Commonwealths would have rejoiced long ago in the immigration of a great number of sturdy workmen—of good citizens directly brought into their borders through the call for their services in this great enterprise.

I know that the majority of this House can not, even if individual members would candidly desire to do so, appreciate, as do we of California, the enormity of this evil directly traceable to this source. But I hesitate not to put this down in this place in this sketch. For it will be justified by those who are competent by reason of their immediate observation and experience to judge. And justification for it, and strength absolute in it, will appear more and more in the light of observation. And this is said without casting a shadow of reflection upon those honorable and patient hearers who can not, by reason of their lack of personal observation, seeing, and estimating—as we have seen and judged in California communities—accord a weight that is due in these premises.

But now I come to something about which there can be no difference of opinion nor any hesitation whatsoever under the prompting of a common conscience.

Better that this road had not been constructed for two or three or five years after the date when the rails were actually joined—although as a matter of fact, as already indicated, it would have been built and completed much earlier than it was if the Government had proceeded to construct under direct appropriation and entirely retained ownership—than that the archives of this Republic should hold the testimony of the investigating committees which have, it is confessed, only skimmed the surface by their inquiries as to how and why certain legislative action was had and why other just and equitable propositions were defeated.

A single statement of a single outcome in the way of fact developed carries the whole story with it, both as to presumable operations here and undeniable iniquities elsewhere. The Union Pacific Railroad Company claimed that the cost of construction reached the stupendous figure of $90,000,000. And this for the construction of the line of railway leading from Omaha to Ogden, a distance of a little over 1,000 miles. The Wilson investigating committee, so called, imperfect and halting, and oftentimes far too lenient as its examinations were, drew to light that, of this amount, not less than $40,000,000 was a clear sum of misrepresentation in the market and robbery toward the Government and the people. And that there may be no dispute upon this point, I call your attention to the fact that in his recent argument before the House Committee on Pacific Railroads, of this Congress, John F. Dillon, attorney and counselor at law and representative of the present Union Pacific Railroad administration, virtually admits the stealing.

And right in this connection I might also draw attention to the fact, although it involves perhaps no moral turpitude beyond that which may be said to be sometimes exemplified in what is technically called, in the language of the street, "the sublimity of cheek," right here I might draw attention to the fact that this same John F. Dillon has the transcendent effrontery, while admitting a Credit Mobilier stealing of $40,000,000, to assert that no further reduction can be made from the actual cost price; but that upon the cost price and the expenditures warranted for enumeration by section 18 of the original act, 10 per cent. per annum is not earned and never has been earned by the Union Pacific Railroad Company.

Mr. Speaker, I have been patiently but anxiously awaiting a report from this Pacific Railroad Committee—curious to learn whether they accepted that statement, and really entertained and nursed a belief in an assertion or an "argument" of that kind.

Go back to that original charter act of 1862. Although it was not the act it should have been, it was by no means altogether a statute dictated or prescribed in its phraseology by men representing the original incorporations. The good men of the Congress of 1862—and I hold and have ever held and proclaimed, ay, a thousand times, that the majority of every Congress has been composed of good men—the good men of that Congress had somewhat to say, and conspicuously so, in the text of that bill. And blessings be upon their heads for section 18, which I will now send up to the Clerk's desk and ask to have read to the House.

SEC. 18. *And be it further enacted*, That whenever it appears that the net earnings of the entire road and telegraph, including the amount allowed for services rendered for the United States, after deducting all expenditures, including repairs, and the furnishing, running, and managing of said road, shall exceed 10 per cent. upon its cost, exclusive of the 5 per cent. to be paid to the United States, Congress may reduce the rates of fare thereon if unreasonable in amount, and may fix and establish the same by law. And the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line, and keeping the same in working order, and to secure to the Government at all times (but particularly in time of war) the use and benefits of the same for postal, military, and other purposes, Congress may at any time, having due regard for the rights of said companies named herein, add to, alter, amend, or repeal this act.

The position which I take is that under this section the Congress of the United States now possesses, and for many years past has possessed, the right to reduce the transportation charges of the Union Pacific and the Central Pacific Railroad Companies. And at this very point—as well as at a later period in my remarks—it should be noted that under the subsequent acts granting subsidies to the Southern Pacific Railroad Companies any reduction made by Congressional act of the kind and character which I advocate must mark the maximum figure for charges on the Southern Pacific as well as on the Union Pacific and Central Pacific Railroads.

At this point I will ask to have read the bills which I have presented to this Congress on this subject.

A bill (H. R. 99) to fix and establish the maximum rates of fares on the Union Pacific and the Central Pacific Railroads.

Whereas the eighteenth section of "An act to aid in the construction of a railroad and a telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 2, 1862, provided as follows: "*And be it further enacted*, That whenever it appears that the net earnings of the entire road and telegraph, including the amount allowed for services rendered the United States, after deducting all expenditures, including repairs and the furnishing, running, and managing of said road, shall exceed 10 per cent. upon its cost (meaning its actual cost), exclusive of the percentage to be paid to the United States, Congress may reduce the rates of fare thereon, if unreasonable in amount, and may fix and establish the same by law; and the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line, * * * Congress may at any time, having due regard for the rights of said companies named herein, add to, alter, amend, or repeal this act:" Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after forty days from and after the passage and approval of this act the maximum rate of passenger first-class fares on the Union Pacific Railroad and the Central Pacific Railroad, which two railroads constitute the railroad line from the Missouri River to the Pacific Ocean contemplated and provided for under the provisions of the act referred to in the preamble to this act, shall not exceed 3 cents per mile between all stations or depots that are now or may hereafter be established on said roads; and it shall be unlawful to collect any greater sum or amount as a passenger first-class fare for the transportation of any passenger on the Union Pacific Railroad or on the Central Pacific Railroad, between any stations or depots or points on said roads, or either of them, where passengers are allowed to get on or depart from a car devoted in part or entirely to the carrying of persons traveling or desiring to travel as passengers upon said roads, or either of them. And it shall be unlawful for the Union Pacific Railroad Company or the Central Pacific Railroad Company, by officers or agents, or representatives of any title, from and after the date aforesaid, namely, from and after forty days beyond and next succeeding the passage and approval of this act, to charge or collect any greater amount than 2 cents per mile for a passenger second-class fare for the transportation of any passenger between any stations, depots, or points on either of said roads where a passenger is or may be allowed to get on or depart from a car devoted in part or entirely to the carrying of persons traveling or desiring to travel on said roads, or either of them. And it shall be unlawful for the Union Pacific Railroad Company or the Central Pacific Railroad Company, by officers or agents, or representatives of any title, from and after forty days from and after the passage and approval of this act, to charge or collect any greater amount than 1½ cents per mile for a passenger third-class fare for the transportation of any passenger between any stations, depots, or points on said roads where a passenger is or may be allowed to get on or depart from a car devoted in part or entirely to the carrying of persons traveling or desiring to travel as passengers on said roads, or either of them. Fractions of a mile, for the purpose of this act, shall be measured by a standard division of one-third as near as is practicable, and no more than one-third of the amount charged and collected for passenger transportation for one mile on either of the above-mentioned railroads shall be charged and collected for one-third of a mile or less.

SEC. 2. That the Secretary of the Interior is hereby authorized, empowered, and instructed to cause to be prepared, printed, and published within twenty days from and after the passage and approval of this act, a list of the stations or depots along the railroad line of the Union Pacific Railroad Company and the Central Pacific Railroad Company, which railroad line was constructed under the authority and with the aid of subsidies provided in the act referred to in the preamble to this act, with an annexed precise statement of the distances, in miles and fractions of miles, between said stations or depots on said railroad line, together with a statement, conveniently arranged, of the precise distance, in miles and fractions of miles, between each of said stations or depots as are between the termini of said railroad line and the city of Omaha, in the State of Nebraska, and the city of Council Bluffs, in the State of Iowa, and the precise distance, in miles or fractions of miles, between each of said stations or depots on said railroad line and the city of San Francisco and the city of Sacramento, in the State of California, together with a schedule of the maximum limits for first-class and second-class and third-class fares between all stations or depots as hereinbefore mentioned, specifying the same with particularity and in a form convenient for ready reference. In making an estimate for fares all fractions of a mile shall be measured by a standard one-third division, at the rate of one-third of the fare charged or allowed for one mile for each one-third of a mile or less. And the Secretary of the Interior shall, so soon as practicable, serve or cause to be served an engrossed copy of this list and schedule upon the president, secretary, and directors of the Union Pacific Railroad Company together with a printed copy of this act; and the Secretary of the Interior shall, so soon as practicable, serve or cause to be served an engrossed copy of the list and

schedule so prepared by him as aforesaid upon the president, secretary, and directors of the Central Pacific Railroad Company, together with a printed copy of this act, serving or causing to be served one copy of said list, schedule, and act upon each one of the persons named and included in this enumeration of railroad officers and managers; and the Secretary of the Interior shall offer or cause to be offered a copy of the list, schedule, and act herein mentioned and referred to, as an advertisement, to the publishers of the Daily Republican, a daily paper printed in the city of Washington, District of Columbia; and to the publishers of the Daily New York Tribune, and the publishers of the Daily New York World, and the publishers of the Daily New York Star, daily papers printed in the city of New York, in the State of New York; and to the publishers of the Daily Herald, a daily paper printed in the city of Omaha, in the State of Nebraska; and to the publishers of the Daily Record-Union, a daily paper printed in the city of Sacramento, in the State of California; and to the publishers of the Daily Examiner, and to the publishers of the Daily Bulletin, and to the publishers of the Daily Alta, and to the publishers of the Daily Chronicle, daily papers printed in the city of San Francisco, in the State of California, for publication as an advertisement for the period of three months, or for a longer period, in the discretion of the Secretary of the Interior.

SEC. 3. That forty days from and after the passage and approval of this act it shall be unlawful for the Union Pacific Railroad Company, a corporation incorporated under and by virtue of a law passed by the Congress of the United States, or for the Central Pacific Railroad Company, a corporation incorporated under a law passed by the Legislature of the State of California, but equally with the Union Pacific Railroad Company subject to the control of the Congress of the United States in the matter of the limitation of its fares, so far as its line of road is a part of the line of railroad from the Missouri River to the Pacific Ocean contemplated in the act referred to in the preamble to this act, to charge for passenger transportation upon their respective lines of railroad a greater sum or amount than shall be set down in the schedule of rates for passenger fares prepared, printed, and published by the Secretary of the Interior, or under his direction, as provided in this act, and by him transmitted in engrossed form to the officers and managers of the Union Pacific Railroad Company, and to the officers and managers of the Central Pacific Railroad Company, as directed in section 2 of this act. And every person traveling upon either of said railroad lines as a passenger, or offering himself as a traveler or passenger, or one desirous to become such, on the lines of the railroad companies aforesaid, or either of them, from whom a greater sum or amount than is specified in said schedule shall be demanded and collected or exacted for transportation upon the Union Pacific Railroad or the Central Pacific Railroad aforesaid, or either of them, shall have and possess, and is hereby granted, a right of action for personal and punitive damages against said Union Pacific Railroad or said Central Pacific Railroad Company. Actions to enforce the provisions of this act may be brought in any court of the United States, or in any court of any State or Territory of competent jurisdiction.

SEC. 4. That any person in the employ of either of the railroad companies above named who shall demand and collect or exact a passenger fare on either of said roads in excess of the amount or sum prescribed by the schedule of passenger fares prepared and published by the Secretary of the Interior, as aforesaid, shall be guilty of a misdemeanor, and, upon conviction, shall be punishable for the same by a fine not exceeding $100, or by imprisonment for a term not exceeding six months, or by both such fine and imprisonment. Trial and conviction for such an offense may be had in the district court of the United States for the district where such offense may have been committed or where such person offending may reside.

SEC. 5. That any person who shall tender to any railroad station or depot ticket agent or railroad conductor on the Union Pacific Railroad or on the Central Pacific Railroad, constituting the line from the Missouri River to the Pacific Ocean contemplated in the act referred to in the preamble to this act, a sum or amount for fare or fares between given points, which sum or amount shall reach the limit of the maximum for rates of passenger fare herein prescribed or provided for, and who shall by such agent or conductor be refused a ticket or a passage between said points of the class for which such maximum payment shall have been tendered, shall have and possess, and is hereby granted, a right of action for personal and punitive damages against the company whose officer or agent shall have thus refused a ticket or passage as aforesaid. Jurisdiction for such causes as may arise under the provisions of this section, or under any section of this act, shall belong to and shall be exercised in the district court of the United States for the district where such tender of maximum sum or amount of passenger fare as aforesaid shall have been made and shall have been refused, or where a passage shall have been refused or denied to a person applying for passage and tendering the passage-money as aforesaid, or where the person who shall have been refused a passage at the time of the tender as aforesaid, or refused a ticket entitling him to a passage as aforesaid, shall reside.

A bill (H. R. 1803) to fix and establish the maximum rates of freight fares on the Union Pacific Railroad and Central Pacific Railroad.

Whereas the eighteenth section of an act to aid in the construction of a railroad and a telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes, approved July 2, 1862, provided as follows: "*And be it further enacted*, That whenever it appears that the net earnings of the entire road and telegraph, including the amount allowed for services rendered the United States, after deducting all expenditures, including repairs and the furnishing, running, and managing of said road, shall exceed 10 per cent. upon its cost [meaning its actual cost], exclusive of the per cent. to be paid to the United States, Congress may reduce the rates of fare thereon [meaning rates of freight fares as well as rates of passenger fares] if unreasonable in amount, and may fix and establish the same by law; and the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line, and keeping the same in working order, and to secure to the Government at all times the use and benefits of the same for postal, military, and other purposes, Congress may at any time, having due regard for the rights of said companies named herein, add to, alter, amend, or repeal this act;" and

Whereas section 15 of an act amendatory of the above-entitled act, approved July 2, 1864, provided as follows: "*And be it further enacted*, That the several companies authorized to construct the aforesaid roads [including the Union Pacific Railroad and the Central Pacific Railroad] are hereby required to operate and establish said roads, for all purposes of communication, travel, and transportation, so far as the public and the Government are concerned, as one continuous line:" Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after sixty days from and after the passage and approval of this act it shall be unlawful for the Union Pacific Railroad Company or the Central Pacific Railroad Company, by officer, or agent, or servant, or representative of any name, to charge, demand, or receive from any person, company, or corporation, for transportation of property, either by the car-load or otherwise, a greater sum than 70 per cent. of the lowest rates of freight or the lowest prices of carriage of property prescribed and set down in their respective schedules or lists of freight rates or prices of carriage of property existing and in force on the 3d day of December, 1883.

SEC. 2. That it is hereby made the duty of the directors of the Union Pacific Railroad Company and the directors of the Central Pacific Railroad Company, within thirty days from and after the passage and approval of this act, to cause to be prepared and to be printed schedules made out in conformity with the provisions of section 1 of this act, and at least two copies of each of said schedules shall be conspicuously posted up or placed conveniently for reference at every railroad station on their respective roads. The failure or omission of the directors of said railroad companies to act in obedience to the commands of this section shall be construed as the failure and omission of each of said directors, and each and every one of them shall, by such failure or omission, be deemed guilty of a misdemeanor on each day of said failure or omission from and after sixty days from and after the passage and approval of this act, and upon conviction thereof shall be fined not less than $1,000 for every such day's failure or omission, one-half of which sum shall go and belong to the shipper or consignor patronizing said roads, or either of them, or citizen proposing to become a shipper or consignor and to patronize said roads, or either of them, who shall make the affidavit upon which the suit or suits on this cause of action shall have been brought. Each day's failure or omission as aforesaid shall constitute and be held to be a separate cause of action for the suit contemplated and provided for in this section. All district attorneys of the United States are hereby instructed to prosecute suits for the enforcement of this section and the recovery of the penalty attached to the failure or omission herein set forth; but nothing in this section shall be so construed as to in any manner or degree deprive a shipper or consignor, or citizen proposing to become such shipper or consignor, of his right of action for personal and punitive damages by reason of any excessive charges for freight rates, or by reason of refusal to carry or deliver property offered by such shipper or consignor, or citizen proposing to become a shipper or consignor, as a patron of the Union Pacific Railroad Company or the Central Pacific Railroad Company.

SEC. 3. That the railroad corporations known as the Union Pacific Railroad Company and the Central Pacific Railroad Company, operating the railroad line from the Missouri River to the Pacific Ocean contemplated in the act which is entitled in the preamble to this act, shall receive any and all property offered to them, or to any agent or employé, for transportation, and shall make and deliver to the shipper or consignor the usual bill of lading for such property consigned to any consignee, and shall transport all such property over their roads on the continuous line of the railroad from the Missouri River to the Pacific Ocean contemplated in the act entitled in the preamble to this act, at the tariff of rates prescribed in the first section, namely, at a charge of not more than 70 per cent. of the rates of freight or prices of carriage which are prescribed or set down as maximum rates of freight in the schedules of the Union Pacific Railroad Company and the Central Pacific Railroad Company existing and in force on the 3d day of December, 1883, or at a less sum or amount of charges than is permitted or allowed by the first section of this act; and for any failure or refusal by said corporations, or either of them, through any agent or employé or servant, to receive or to transport or to convey such property so offered as aforesaid, the shipper or consignor, or citizen proposing to become a shipper or consignor, shall have a right of action for personal and punitive damages against the corporation whose agent or employé or servant shall have failed or refused to transport such property for the party complaining: *Provided*, That the punitive damages shall not be less than $1,000 in every such case where judgment is given for the plaintiff or complainant: *And provided further*, That the companies named in this act shall not be obliged to take combustible or explosive articles, except under such special rules and regulations as the directors and officers may prescribe. And in the absence of any such schedule as is provided for in section 2 of this act, the plaintiff or complainant shall be allowed, and is hereby authorized, to prove any excess of demand for rates of freight or for prices of carriage by evidence of payments made for transportation or carriage of any particular class or kind of property as freight on said roads, or either of them, similar to the transportation or carriage required by him, which payments shall have been accepted by said railroad company or companies, or either of them, as a full and complete payment of freight rates established and collected under the schedules or lists of the Union Pacific Railroad Company and the Central Pacific Railroad Company, or either of them, existing and in force on the 3d day of December, 1883.

SEC. 4. That in the trial of any action arising under the provisions of this act any director, officer, agent, conductor, book-keeper, employé, servant, receiver, or trustee of the Union Pacific Railroad Company or the Central Pacific Railroad Company may be compelled to attend upon court, or before a duly authorized commissioner or notary, or other duly authorized person, to testify; and he may be compelled to bring with him the books and papers named and enumerated in the summons served upon him. In case of the inability of the person or persons summoned as above provided for to produce the books and papers named in the summons that may be served on him or them, or any of the books and papers so designated and called for, he or they may be compelled to testify as to his or their knowledge of the whereabouts of such books and papers, or any of them, or as to their contents if they are lost or destroyed. And for the purposes of this act and to prove at any time the maximum sum or amount allowed to be charged, demanded, or received for the transportation or carriage of property on said railroads, or either of them, the books and papers of the Union Pacific Railroad Company and the Central Pacific Railroad Company shall be open for examination by any commissioner or clerk or notary duly authorized or deputized to make such examination, and to take and report testimony with respect to the same in a case arising under the provisions of this act; and any director, officer, agent, book-keeper, or employé, or servant of any name, of said companies, or either of said companies (being the permanent or temporary custodian of such books or papers as it may be alleged contain evidence of the rates of freights or prices of carriage of property established by said companies, or either of them, prior to the 3d day of December, 1883, and on that day existing and in force, or having such books or papers in keeping at the time of the service of the demand or summons provided for in this section) who shall refuse to exhibit for examination to a duly authorized commissioner or clerk or notary deputized to make the examination by a court of competent jurisdiction, such books and papers belonging to the Union Pacific Railroad Company, or belonging to the Central Pacific Railroad Company, shall be guilty of a misdemeanor, and, upon conviction thereof, shall be fined in a sum or amount not exceeding $5,000 and not less than $1,000, or by imprisonment for a period not exceeding one year, or by both such fine and imprisonment; but nothing in this section shall be so construed as to prevent a shipper or consignor, or citizen proposing to become a shipper or consignor, and acquiring a right of action as provided in this act, from proving the proper and lawful rates of freight or prices of carriage of property by such evidence as is allowed and authorized by section 3 of this act.

SEC. 5. That actions to enforce the provisions of this act may be brought in any court of the United States or in any court of any State or Territory of competent jurisdiction.

SEC. 6. That rights of action for personal and punitive damages shall be and shall exist for a period of one year from and after the date of any alleged overcharge or excess of advance demand for rates of freight or prices of carriage as provided against in the preceding sections of this act.

SEC. 7. That Congress may at any time alter, amend, or repeal this act.

The questions presented are, taking them in the order given by the language of the quoted eighteenth section of the charter act, first, whether the Central Pacific Railroad Company and the Union Pacific Railroad Company from the net earnings of the entire road and tele-

graph, including amount allowed for services rendered the United States, after deducting all expenditures, including repairs and the furnishing, running, and managing of said road, paid 10 per cent. upon its cost, exclusive of the 5 per cent. to be paid to the United States; and, second, whether the present charges for freight and passenger fares, assuming that the word "fares" includes both charges for transportation of persons and of goods, are reasonable in amount. The natural numbering of the inquiries would be to place the consideration of the "reasonableness" first; for if we have no grievance from overcharge, we may not and ought not to attempt to invoke your action; but there is some convenience in following the section as it reads in putting the questions in my remarks on this occasion; and you will not, I am sure, hesitate to take it for granted for a few minutes that the tolls are excessive, when I tell you that for years both great political parties in two States have cried out against them in their State conventions and demanded great reductions and other attendant reforms.

Ten per cent. upon the cost of these roads—upon the actual cost? That is to be ascertained or approximately estimated. It is not necessary for our purposes that we should obtain and present an absolutely accurate or closely itemized account. That would be impossible. And hereon mainly rests the defiance of these monopolies. The proposition, the suggestion for Congressional action in the premises, has been scouted as ridiculous, because it is claimed that the cost of the road, including expenditures that it is contended may be properly charged up against the gross income for defeating the purposes here announced, is so large as to forbid any interference on our part. It is the habit of the monopoly lobbyists, as you are all aware, to indulge in language and in manners that may be described as derisive and sneering; indeed, this is a large portion of their stock in trade—the almost invariable preface and conclusion of their so-called arguments in committee-room or corridor corner. And so here the effort has been industriously made to brush aside all consideration whatsoever of the proposition for Congressional action in the premises, by the heaping up of contemptuous adjectives upon any man who would have the temerity, who would be so foolish as to assume that a foundation had been laid for the class of legislation indicated by the aggregate of receipts and of profits coming to the coffers of the companies owning and controlling the one continuous line of railroad and telegraph reaching from the Missouri River to the Pacific Ocean, and started under the subsidizing acts of July 1, 1862, and July 2, 1864.

If it be true that the Central Pacific Railroad Company and the Union Pacific Railroad Company have not at any time since the completion of the one line designated received an annual amount as earnings of the road which would constitute a basis for such bills as I have had the honor or the impudence to introduce—I refer to House bills numbered 99 and 1803, which have just been read—then I submit that it is a somewhat singular and certainly inconsistent spectacle which we behold in the room of the Pacific Railroad Committee during the early or midmonth days of February, 1884. On one occasion a distinguished attorney devotes three hours to the discussion of these measures, giving at least two-thirds of that time to the consideration of the bills which I have introduced. And on another occasion, when your humble servant appears to represent the people in advocacy of these measures, there is a great array of counsel to represent these corporations, whose managers are at times said to be so indifferent to such advocacy, because there is no warrant or predicate for it in the letter of the original law! Are not these appearances by counsel sufficient to lend such strength to the presentation of these propositions as of themselves to call for your candid and careful hearing and reflection with respect to the subject?

Now, I do assert that these railroad companies, chartered and owned and controlled as I have stated, have received during the last fifteen years, in net earnings of the entire road and telegraph, including and excluding as section 18 provides, more than 10 per cent. upon its cost. And I do assert that their charges are unreasonable and even extortionate in amount. And I purpose submitting at this time some evidence in support of these assertions. And I draw attention to the fact that that which I shall present in the way of testimony on this occasion indicates sources from which other and cumulative and perhaps still weightier testimony may be drawn by courts clothed with the power which the bills which I have introduced would confer upon them, and given the right to issue mandates peremptory and searching, upon the institution of suits for which my measures provide and authorize.

It should be borne in mind that we have here only to make out a *prima facie* case. And one would naturally suppose, if he placed any reliance upon the complaisant or the altogether disparaging remarks of counsel for the corporations, at the beginning and the close of their arguments, that an inquiry by the courts, as here suggested and urged, would be welcomed by their employers as an opportunity to vindicate their assertion that their receipts are not in excess of the statutory limitation—that their ticket and freight charges are not unreasonable in amount.

But first I will devote my time to the consideration of the case of the Central Pacific Railroad Company. The Central Pacific Railroad Company was not directly incorporated by the Congress of the United States as was the Union Pacific Railroad Company, but was brought under the wings of the law of the original charter act by virtue of one of the sentences of the ninth section of the act of July 1, 1862. The sentence reads:

> The Central Pacific Railroad Company of California, a corporation existing under the laws of the State of California, are hereby authorized to construct a railroad and telegraph line from the Pacific coast, at or near San Francisco, or the navigable waters of the Sacramento River, to the eastern boundary of California, upon the same terms and conditions, in all respects, as are contained in this act for the construction of said railroad and telegraph line first mentioned, and to meet and connect with the first-mentioned railroad and telegraph line on the eastern boundary of California.

Provision is made in the following act for the extension of the Central Pacific Railroad eastward from the eastern boundary of California until it shall have met the rails of the Union Pacific Railroad Company.

I have here the original articles of the association of the Central Pacific Railroad Company, which I will annex in an appendix to my speech. The length of the road as then contemplated was to be about one hundred and fifteen miles, and the amount of the capital stock is fixed at $8,000,000. The date is the 27th of June, 1861. Amended articles of association of the Central Pacific Railroad of California, which I will also place in the appendix, were filed with the secretary of state on the 8th day of October, 1864—about three months after the passage and approval of the amendatory Pacific railroad act by the Congress of the United States. In the preamble to these articles it is stated that it has been ascertained that the capital stock is less than is necessary, and $20,000,000 is set down as the sum required "to complete, operate, and maintain the railroad of said company." It is not necessary to dwell upon this great enlargement of the capital stock as indicative of the rising expectations of this company. A great enlargement, and yet how small the amount as compared with the subsequent claim of cost!

But it may be well at this time to call attention to the fact in the history of this enterprise—notorious on the Pacific coast, but probably little known at any period beyond our borders; the fact of popular accusation, so to speak—that it was charged that the intention of the incorporators or directors and principal owners in the Central Pacific Railroad Company originally was simply to build a railroad line into the mountains a distance sufficient to feed what was known as the Dutch Flat wagon-road, a transmountain coach-path, intending to go no further in this railroad business. Certain it is that the least practicable and the most expensive of three well-ascertained routes over the Sierra Nevadas was adopted by this company; a selection, by the way, which in itself constituted a violation of the Pacific Railroad law. Certain it is that a route could have been adopted—that by the Feather River, through Plumas County—on which there would have been lower grades, far less tunneling, and no requirement whatever for snow-sheds. Certain it is that the Central Pacific Railroad Company or the directors in control took of the bonds which were solemnly dedicated to aid in the construction of one continuous line from tide water on the Pacific coast to the Missouri River, and hypothecated them in order to purchase and control an interest in the railroad from Freeport, on the Sacramento River, to the town of Folsom, in Sacramento County—a railroad extending in the direction of the State of Nevada, and which it was announced would be and constitute the first section of a rival transmountain railway. It would hardly be pertinent at this moment and in this relation to also mention the fact that some of these same sacredly appropriated bonds of the United States Government were used by the management of the Central Pacific Railroad Company for the purpose of raising money with which to buy up all the coal-oil in the State, the price of that household necessity rising immediately after this purchase 50 per cent. in the markets of California. Whether these facts come in by relevant right or are dragged in by main strength, it doth appear from this recital that the spirit of this management which I am here to arraign was exemplified at the very outset of its history in the Commonwealth which I have the honor to represent.

Now, the Central Pacific Railroad, with the aid of local subsidies as well as authoritative promise of national grants and loans, began work in 1862 at the city of Sacramento. There has been much eulogistic and fulsome talking and printing about the alleged "audacious enterprise," and, indeed, about the "self-sacrificing" valor exhibited in this beginning at this particular date. We who ask Congress to carry out the letter and spirit of the original charter act and pass a bill fixing the rates of fare hear, among other accusations before committees and before individual legislators, that we are seeking to destroy the business interests or to unrighteously cut down the business profits of men who are entitled to the greatest possible kindness and consideration, to the highest degree of respect, as bold and even patriotically hazarding men, because they did not wait as did the Union Pacific Railroad Company management for the passage of the act of 1884; but so early as the winter of 1862, threw the first shovelful of dirt on the surveyed line of a transmountain route, by the side of the waters of the Sacramento.

Why, Mr. Speaker, there was a local demand for a transmountain road, with passenger and freight traffic specifically enumerated, person for person, pound for pound, between the capital of our State and the centers of the silver districts of Nevada. This was sufficient to justify in the mind of the most careful business man the "venture" about which there has been so much of honeyed declamation, so many pages of overwrought and "unearned" newspaper eulogy. And besides, remember that to which I have already alluded: there were enormous

local contributions and substantial promises of actual stock subscriptions which would justify unto men of moderate courage in such matters the inauguration of the undertaking.

There has been so much sniveling on the one hand and lickspittle laudation on the other in regard to the wonderful "bravery," the "broad-minded recklessness" with which the renowned saints and orphans of the Central Pacific Railroad Company entered upon the construction of their road that once for all upon a permanent and long-enduring record I purpose to put the facts which will shame this whole miserable business out of countenance. The management of the Central Pacific Railroad Company originally entered upon a legitimate enterprise, which from the moment of practical inception was justified and stimulated to an extent that created a confidence and a rational and sure expectation of success beyond that having reference to any similar enterprise ever planned or undertaken in the United States of America. There was no risk in it; and I do protest, in order that I may have a clear and candid audience at this place and time and elsewhere, that Leland Stanford and Charles Crocker and C. P. Huntington are, under no possible review of this history entitled to be placed on the pension-list of the American Government. They have had a "fat thing" from the beginning, and they knew it would be so; as the president of the corporation once told me in person, and as the affidavit of Mr. Rodgers of the Placer County board of supervisors, which was placed in the archives of this House and taken therefrom without receipt, unmistakably determines.

And I do say that of all pieces of public impudence, of long and long-endured manifestation, the claim of these men for title to supreme honor and thanksgiving on account of having "given" the Government the credit in money that enabled the country to witness the building of the road is a piece that can not be resisted, but is unapproachably stupendous.

I shall not go into a full analysis of the Pacific railroad acts. I suppose they are familiar to most of the members of this House, and they should be read over by every member who desires to be thoroughly instructed with respect to the history and the atrocities committed by the corporations acting under them.

I call attention here to the fact that in the location of the "western base of the Sierra Nevada Mountains" the line was drawn to within a few miles of the city of Sacramento, so that treble the number of bonds should be issued—three times as many bonds as were set apart and agreed to be loaned for construction in the valley—in the name and on behalf of the Central Pacific Railroad Company. I do not now inquire into the morality of that proceeding, nor is there need to quote it now as further proof of the grasping and dishonest spirit of this management. But there is the fact, which has its obvious bearing when you are considering the propriety of passing a bill reducing the rates of fare on the one continuous railroad line from the Missouri River to the Pacific Ocean, authorized and endowed by the Congressional acts of July 1, 1862, and July 2, 1864. The history of this organization from the very beginning is a history of rapacity and greed, oppression and outrage.

From $8,000,000 the capital stock goes up to $20,000,000. Then this was not to be a Dutch Flat wagon-road feeder, but an actual connecting portion of a transcontinental railway. And after repeated surveys and unnumbered publications of estimates unquestionable, after a great many earnest consultations by the board of directors, at which every accessible item of information was duly considered, $20,000,000 was fixed as the limit required.

Whether you consider this leap from eight to twenty millions as proof or mere indication of a change in purpose with respect to the ultimate length of the railroad, or a change in estimate as to the actual cost—the new calculation resulting from more accurate surveys or the discovery of cost on previously determined route where there had been no real measurements and precise estimates—is not important. But it is desirable that you should bear in mind that at the date mentioned the capital stock was increased as stated, and then fixed at no greater sum than $20,000,000.

The leap was considerable; but the last amount now seems petty as compared with the present claim of the owners for the cost price of the road from San Francisco to Ogden.

The question is as to whether under the eighteenth section of the original Pacific railroad act there has been during any year since the completion of the road in 1869 an income sufficient to warrant the Congress of the United States in reducing and fixing the rates of fare upon the Pacific railroads, forming one continuous line from the Missouri River to the Pacific Ocean, and authorized and subsidized under the acts of July 1, 1862, and July 2, 1864. But bear in mind that it is not necessary to make out an absolute and conclusive demonstration of the fact that such income has been derived, but only, I repeat, to present a *prima facie* case on which by law the power of the courts may be and shall be invoked—to give unto every actual or intending patron a right of inquiry and adjudication in the premises. With this purpose clearly in view, a sketch of a portion of the financial history of one or both of these corporations is proper and necessary. I speak now, of course, with respect to original cost and current expenditures and rates.

It has been said that it is impossible to arrive at the actual outlay by the contractors for the building of either the Central Pacific Railroad or the Union Pacific Railroad, since both were built under contracts made by the directors of the companies with themselves. But I think we can sufficiently approximate to more than meet the requirements of this situation. And speaking with reference to the deceiving and fraudulent contracting within the circle of the management and ownership, I desire to call attention to the articles of association of the contract and finance committee, which I shall also place in the appendix to my speech.

Before going into the question as to the actual cost by the contractors, let me call attention to the aid which the Central Pacific Railroad Company received from the United States, and from the State of California, and from county governments:

From the State of California, interest on $1,500,000 of bonds for thirty years	$3,150,000 00
From San Joaquin County	350,000 00
From Santa Clara County	350,000 00
From Placer County	100,000 00
From city of Placerville	250,000 00
From city and county of Sacramento	300,000 00
From city and county of San Francisco	650,000 00
From Tuolumne County	50,000 00
From Calaveras County	50,000 00
From lands in San Francisco, Sacramento, and Oakland	7,750,000 00
From land grant (lands sold—see report)	5,002,162 95
From land grant still unsold (see report), at same rate per acre as lands sold, 10,588,781 acres at $4.85	51,355,587 85
From land granted to the Western Pacific, and which they surrendered to Charles McLaughlin when turned over to the Central Pacific the road and property of the Western Pacific, 1,100,000, also worth $10 at least an acre	11,000,000 00
Total value	80,357,750 80

And while I am on this subject, let me show to you the land grant, absolute and entire, to the Union Pacific Railroad Company:

Value of lands sold	$17,960,100 80
Value of lands unsold, estimated at the same as that for which the lands disposed of were sold	65,092,500 00
Total from lands alone to the Union Pacific Railroad Company	83,052,600 80
Making a total of aid to both Pacific railroad companies	163,410,350 60

Now, this estimate does not include the United States subsidy bonds, because these may one day be paid by the companies. I have confined myself to gifts made to what now constitute the Central Pacific and Union Pacific Railroad Companies; and I shall hereafter, if I have your indulgence, be able to show to you that from whatever just standpoint you consider the cost of construction, the absolute gifts of these companies have been far more than enough to build 1,779 miles of road—from Omaha to Sacramento.

But, right now, in this very connection, I will draw your attention again to the fact that Judge Dillon, in his argument recently made before our Committee on Pacific Railroads, claimed that the main line of the Union Pacific cost $90,000,000, but admitted that the Wilson report on the Credit Mobilier scheme and transaction had shown that the cost did not exceed $50,000,000. So that the aid in lands given to the Union Pacific Railroad Company in lands alone is over $33,000,000 in excess of the highest possible asserted cost of the main line.

Taking the Central Pacific Railway Company in the same way, and what is the result? You find that the reported cost of the road—seven hundred and thirty-seven miles, from Sacramento to Ogden—is $103,414 per mile. (See Armstrong's report, June 30, 1882.) This would aggregate $76,216,118, or $4,141,632 less than the value of gifts made to this company—by this estimate the calculation alone leaving that surplus to be applied to the building of other roads.

Bear in mind that these statements do not include the subsidy bonds of the United States issued in behalf of this enterprise. And for the sake of convenient juxtaposition their amount might well be restated here:

To the Central Pacific Railroad Company		$25,882,120
To the Western Pacific division		1,970,560
These making a total of		27,855,680
To the Union Pacific Railroad Company	$27,236,512	
To the Union Pacific, Kansas division	6,303,000	
Making a total of		33,539,512
Making a grand total issue of		61,395,192

What did the Central Pacific Railroad actually cost? I will give you data on which to rest judgment as to the propriety and justice of enacting into law such bills as I have introduced and had referred to the Pacific Railroad Committee of the House. Time will not suffice for me to enter into an analysis of the process of deduction; and I am clearly of the opinion that no such extended speech and publication on my part will be required or is desirable. Each Representative for himself, upon the basis of figures which I shall submit, will, I think, be able at once or speedily to determine from the sums submitted what his duty is in the premises.

I will first give you a table of the various estimates of cost of the construction of this railroad per mile. Commissioner Armstrong in his report for 1883 puts the cost per mile at $121,665.27. He also makes an estimate of $103,414.38. Mr. Judah estimated that it would cost $53,751 per mile.

For this last estimate I will refer the House to the report of Railroad Commissioner Foote, of California. In the same report it is shown that the first fifty miles in the Sierra Nevada Mountains cost only about $64,429 per mile. When you make a comparison from this with the six hundred miles in Nevada and Utah, which were constructed at a far less sum, you will see that by this data alone there is foundation sufficient for the legislation proposed. And Charles Crocker, one of the directors of the Central Pacific Railroad Company, admits that the first eighteen miles of the Central Pacific Railroad Company cost only $400,000, or $22,222 per mile. The United States Government gave a subsidy of $120,000 for the first seven miles and $528,000 for the next eleven miles, or over $640,000 on the total of eighteen miles, which Charles Crocker says was constructed for $400,000.

Now, in comparing for the purpose of finding the reasonable expenditures and actual cost of building the Pacific railroads, and to approximate to that which must have been the true cost, look at the outlay for the construction of another road by these same parties, or under similar circumstances, taking into consideration the engineering and other obstacles to be overcome in the building of each.

In the building of railroads there are certain elements, or, if you please, factors, which if present or absent greatly enhance or reduce the cost of construction. These elements or factors are—

First. Cuts and embankments.
Second. Tunnels.
Third. Length of trestles.
Fourth. Curvatures and tangent lines.
Fifth. Grades.

Now look at the cost of the Southern Pacific Railroad, which was built by Crocker, Huntington, and Stanford. Mr. Commissioner Armstrong, in his report for 1882, says, at page 257, that the Union Pacific Railroad cost $86,371.07 per mile, that the Central Pacific Railroad cost $103,414.38 per mile, and that the Southern Pacific Railroad cost $81,874.65 per mile.

Looking at the same report, at page 255, and you have the grades per mile, the total number of tunnels, &c. From this it appears that the Central Pacific Railroad, with over 1,400 miles of road, had 8,102 feet of tunnels to make, while the Southern Pacific Railroad, with only 714 miles, had 15,247 feet of tunnels to make. That is to say, the Central Pacific averaged as near as may be estimated, five feet eleven inches of tunneling per mile, while the Southern Pacific averaged over twenty-one feet five inches per mile. (See pages 254 and 255 of Mr. Armstrong's report for 1882.) Now, if Charles Crocker and Company can build a road like the Southern Pacific for the sum of $81,874.65 per mile, tell me precisely why they could not build the Central Pacific, which had less than one-fourth the tunneling, for a very largely reduced cost, making all allowance that you fairly should make for difference in the cost of material, of implements, for labor and excavations.

By the same report, and on page 255, you find that the amount of bridging and trestling-work per mile on the Southern Pacific Railroad was fully as much as on the Central Pacific. And so also as to the culverts.

Now, having called attention to a few of these elements of cost, namely, tunnels, bridges, trestles and culverts, and having shown that the reported cost of the Southern Pacific per mile is $21,539.73 less than the reported cost of the Central Pacific, though the number of culverts and bridges and trestles were about the same in each, and though the tunnels, by feet measurements, were not one-fourth as much on the Central Pacific as on the Southern Pacific, let us look at the comparison of cost from another side.

The line of the Central Pacific Railroad from Reno, Nev., to Ogden, Utah, is 580.32 miles; from Roseville to Redding, 151.60 miles; from Lathrop to Goshen, 146.08 miles; from Niles to San José, 17.54 miles; the Oakland, Alameda, Melrose, and Fruitvale road, 16.69 miles; Sacramento to Banta (about), 64 miles; Niles to Melrose (about), 14 miles; and side-tracks for turnouts, 203.26 miles; making a total of 1,293.89 miles.

There is but a very small portion of this number of miles which may not be said to be nearly on a dead level.

The building of the Southern Pacific road via the Tehichipa Pass and the boring of the tunnel at San Fernando constituted one of the greatest engineering feats of the age. The Central Pacific had but one range of mountains to cross, to wit, the Sierra Nevadas. And here I would direct notice to Senate Executive Document No. 1, part 5, wherein, at page 518, Commissioner Armstrong calls attention to the comparatively favorable opportunities for building near this pass. While the Central Pacific had but one range of mountains to cross, the Southern Pacific had three ranges, as set forth at page 523 of the same volume that has just been referred to; to wit, the Sierra Nevadas, the Sierra Madre or Coast Range, and the San Gorgonio Pass.

Having shown that the Central Pacific had not the same physical and engineering obstacles in the way as the builders of the Southern Pacific had to encounter, may I not (for the purpose of showing what should have been the cost of the Central Pacific) insist that the average grade per mile is a true and just basis on which comparisons of cost per mile can be made? That is to say, I can claim for this argument that the cost per mile may increase in the same ratio as the grade per mile increases; and that the cost per mile should decrease in the same ratio as the grade decreases. It is supposed that cuttings, borings, and fillings or embankment will in a very large degree be indicated by the grade.

Now, look at Commissioner Armstrong's report for 1882, page 255, and you find that the heaviest grade of the Central Pacific is 116 feet per mile, while the heaviest grade of the Southern Pacific is 232.32 feet per mile. You also observe that the average grade of the Central Pacific is 13.6 feet per mile, while the average grade of the Southern Pacific is 68 feet per mile, or five times as great as that of the Central Pacific. Taking this fact into consideration in connection with the statements already made and authenticated as to the length of tunnels, trestlework, &c., is it not fair to assume that since the grade per mile of the Southern Pacific is five times as great as that of the Central Pacific, in reason the cost per mile of the Southern Pacific would also be five times as great as the cost per mile of the Central Pacific?

Conceding this, and you find that as the Southern Pacific cost $81,874.65 per mile with an average grade of 68 feet, the Central Pacific, with an average grade of 13.6 feet per mile, or one-fifth of the grade of the Southern Pacific, cost one-fifth as much as the cost of the Southern Pacific, which would make the cost of the Central Pacific $16,374.80 per mile.

Having arrived at this standpoint, I will from this basis show the whole cost of the Central Pacific: Cost per mile, $16,374.80; cost from Sacramento to Ogden, a distance of seven hundred and thirty-seven miles, $12,079,227; cost of whole line of road as now consolidated with other companies and so embracing 1,404 miles, $22,990,021.92.

Recall to mind the fact that after careful and extended observation and some considerable experience in railroad building the Central Pacific Company raised their capital stock to only $20,000,000, probably only about twice as much as the actual cost of the road as far as Promontory, the point to which that company actually completed the work of construction. All these things are significant. This company was greedy and grasping from its birth; but it grew and developed enormously in its gormandizing faculties and capacity.

Look at this again from another point to see if it is unjust or in any wise incorrect. The estimate presented shows that the Central Pacific should have cost only $16,374.80 per mile. Now, in an affidavit which I have had copied from the State records at Sacramento, and which I will now have read, E. H. Miller, on the 24th day of March, 1881, swears that the Central Pacific is worth only $10,535.96. And this is the grand total, including not only franchise, roadway, road-bed, and rails, but rolling-stock also.

Here is the copy of the affidavit of E. H. Miller, jr., filed with the State board of equalization, showing the value of the Central Pacific Railroad to be but $10,535.96 per mile all told, or $5,838.81 less than I have generously estimated the actual cost of construction to be:

The Central Pacific Railroad Company makes the following statement in relation to its property subject to taxation in the State of California owned by it for year ending on the first Monday of March, A. D. 1881, and of all property used in operating or repairing its railway in this State during such year and its actual value. The entire length of railroad of said company in California is 602.22 miles, operated in the following counties of said State, with the length of railroad in each county:

	Miles.
San Francisco County	4.00
Alameda County	83.52
Santa Clara County	8.50
San Joaquin County	56.75
Sacramento County	41.00
Placer County	112.75
Nevada County	30.25
Sierra County	2.15
Yuba County	15.87
Sutter County	10.00
Butte County	45.00
Tehama County	40.54
Shasta County	18.80
Stanislaus County	22.63
Merced County	36.75
Fresno County	61.06
Tulare County	12.65
Total	602.22

ROLLING-STOCK.

Actual amount in detail of rolling-stock in use on and property used in operating and repairing the line of railway of said company in this State during the year ending the first Monday in March, 1881, and the value of the same, respectively:

No.	Kind.	Value.
122	Locomotives ($5,200)	$634,400
12	Sleeping-cars ($3,000)	36,000
87	Passenger-cars ($1,400)	121,800
65	Emigrant and smoking cars ($1,000)	65,000
32	Baggage, express, and mail cars ($800)	25,600
44	Caboose ($700)	30,800
1,629	Box freight-cars ($400)	651,600
1,290	Flat freight-cars ($250)	322,500
360	Dumps, hand, section, and all other cars ($71.66)	25,800
	Total value	1,913,500

The following is a description of the entire length of the railway of said company in this State, beginning at one of its termini, and thence following the

roadway and right of way for said railway, describing it by metes or bounds, or other description sufficient to identify it, through each county, giving the points of entrance and exit to and from each county it traverses, to the other termini in the State.

Beginning at Fifth street between Townsend and King streets, San Francisco, running thence northeasterly through South Beach blocks, 20, 15, 165, 159, and 9, to the freight ferry-slip at water front. Also beginning on south line N. P. block 408, through blocks between Kentucky and Illinois streets, to Channel street, thence across Channel street to block 165 S. B. survey, being a distance of about two miles, more or less. Also beginning at W. line of Alameda County, thence easterly on Long Wharf through First and Seventh streets, to near E. line of Brooklyn; also from Seventh street Oakland (spur track), to town of Alameda, continuing from depot in Brooklyn, easterly to Niles, thence through Alameda Cañon to line of San Joaquin County near Midway, thence through Stockton, Lathrop, and Lodi to S. line of Sacramento County at Dry Creek, thence continuing through Sacramento, Placer, Nevada, and Sierra Counties, to W. line of State of Nevada. Also from San José to Niles; also from Lathrop, running southeasterly course through Stanislaus, Merced, and Fresno Counties to Goshen, in Tulare County. Also beginning at Roseville, in Placer County, running thence in a general northerly course through Yuba, Sutter, Butte, and Tehama Counties, to the town of Redding, in Shasta County, containing in the aggregate 602.22 miles of way, roadway, and road-bed.

The following shows the value of said property on the first Monday of March, aforesaid, meridian, the gross earnings of the entire railway, and the proportionate annual gross earnings of the same in this State, as near as practicable for the year ending first Monday in March, 1881, and all the property of every kind, situate in this State, owned by said company, and its value:

	Miles.	Value per mile.				Total value.
Franchise	602.22		04	15	13	$25 00
Roadway	602.22	$1,682	14	18	42	1,013,019 50
Road-bed	602.22					
Rails	602.22	5,676	36	68	76	3,418,421 60
Total	602.22	7,358	55	02	31	4,431,466 10
Rolling-stock		3,177	41	02	10	1,913,500 00
Grand total	602.22	10,535	96	04	41	6,344,966 10

Annual earnings for the year ending January 1, 1881:
Annual gross earnings for entire railway, 2,644.95 miles.....$20,508,112 88
Proportionate annual gross earnings of railway in the State..... 12,119,482 69

STATE OF CALIFORNIA,
City and county of San Francisco, ss:

I, E. H. Miller, jr., being duly sworn, deposes and says that he is the secretary of the Central Pacific Railroad Company, the principal place of business of which company is in the city and county of San Francisco, State of California; that the foregoing statement is in all respects correct and true.

E. H. MILLER, JR.

Subscribed and sworn to before me this 24th day of March, 1881.
[SEAL.] CHARLES J. TORBERT,
Notary Public in and for the city and county of San Francisco, State of California.

Mr. A. M. Towne, general superintendent of the Central Pacific Railroad Company, states that for taxable purposes the whole of the Central Pacific and Southern Pacific is worth only $23,485,629, taking in a distance of 2,021 miles of road, which is an estimate of only about $11,600 per mile, or $4,774.80 less than the sum that I have conceded expense of construction might have reached.

From these statements, one under oath, you can not only see that the estimates of value made by the officers of the company are much less than the amounts which I have indicated to be the actual cost, but you will observe that the low estimates quoted from officers' statements were placed by the officers on a road or roads continually improved since the original construction by the annual expenditure of considerable sums of money.

Look at this in still another light and see what the result is.

The bonded debt of the Central Pacific, on the line from Sacramento to Ogden, is as follows:

First mortgage	$19,505,000
Land grant	10,000,000
Additional land grant	1,500,000
California State aid	1,500,000
First mortgage	6,378,000
United States subsidy	25,885,120
Total	$64,768,120

Now add bonds of city and county, $1,000,000, and you have a total of $65,768,120.

Now subtract from this the cost of seven hundred and thirty-seven miles, from Sacramento to Ogden—at $16,374.80 per mile—amounting to $12,079,227, and you have a balance profit from bonds of $53,688,893.

Let us see whether this is a fair statement.

We will assume that the bonds named were sold at par, and that the road did not cost over $16,374.80 per mile, and we thus find that Stanford, Crocker, Hopkins, and Huntington made a profit on the one transaction of $53,688,893. With this little profit they could proceed (having the aid of $23,000,000 more in bonds), and increase the mileage of the Central Pacific from 737 miles to 1,404 miles, and by lease to 3,041.71 miles, besides building several lines not included in the record to which I refer; while as a final "aid" they secured $58,000,000 of paid-up stock of the Central Pacific.

And in this connection I draw attention to the fact that in 1860 Mark Hopkins, one of the directors of the Central Pacific Railroad Company, was worth but $14,300. In the year 1878 he died worth over $30,000,000, he having a one-fourth Central Pacific Railroad Company interest or thereabouts. The inventory in support of this statement is on file in the probate court of the city and county of San Francisco.

Let the list be read at this point in my remarks.

The inventory of Mark Hopkins's estate, now in the clerk's office of San Francisco, shows that he owned of stock as follows:

Central Pacific Railroad Company, 102,812.
Southern Pacific Railroad Company, 79,750.
California Pacific Railroad Company, 24,644.
Sacramento and Placerville Railroad Company, 4,095.
Amador Branch Railroad Company, 1,498.
Berkeley Branch Railroad Company, 222.
Stockton and Copperopolis Railroad Company, 586½.
Los Angeles and San Diego Railroad Company, 350.
Market Street Railroad Company, 1,712.
Potrero and Bay View Railroad Company, 1,250.
Capital Savings Bank, 153.
Home Mutual Insurance Company, 60.
Pacific Life Insurance Company, 20.
Western Development Company, 12,491½.
Mission Bay Bridge Company, 598.
O. & O. S. S. Co., 10,000.
Colorado S. Nav. Company, 1,111.
Wells, Fargo & Co., 2,718½.
Rocky Mountain Coal, 1,817.
Ione Coal, 8,000.
Oakland Water Front, 7,294.
Capital Gas Company, 2,387½.
Donner Lumber Company, 108.
Omaha Gold Mining Company, 1,050.
Richelieu Gold Mining Company, 530.
Riverside Railroad Company, 20.
Also bonds as follows:
Southern Pacific Railroad, $5,176,000.
Central Pacific Railroad, $1,460,500.
California Pacific Railroad, $45,000.
California and Oregon, $105,000.
S. F. O. and A. Railroad, $100,000.
Berkeley Branch Railroad, $22,000.
Amador Branch Railroad, $150,000.
Sacramento and Placerville Railroad, $558,000.
California State Aid, $2,610.
Sacramento City, $700.
United States bonds, $129,375.
Los Angeles Bridge Company, $2,500.

Also $271,784.09 cash; $909,209.88 real estate; $2,719,728.90 debts due estate; $566,133.26 bills receivable; $247,945.34 furniture; $9,781 horses, &c.

In addition he is credited with one-fourth interest in 103,851 shares Central Pacific, and 3 Mission Bay Bridge; $46,725 Sacramento County bonds; $533 United States bonds; 154,000 Central Pacific; $40,000 California Pacific Railroad Company; 4,000 Sacramento Valley Railroad, and $365,915.15 claims against Western Development and Pacific Improvement Companies.

Let us give a glancing estimate at the Union Pacific's actual cost. The Union Pacific has in a little over 1,800 miles of road—taking the total of mileage—1,654 feet of tunnels, that being eight-ninths of a foot to the mile. The Southern Pacific, with 714 miles in 1882, had 15,247 feet of tunnels, or over twenty-one feet and five inches to the mile. Taking all this into consideration, as well as the nature of the country through which the Union Pacific passes, and it will hardly be contended that it could have cost more than the Central Pacific, which I have set down at $16,374.80 per mile. On this basis the cost from Omaha to Ogden, a distance of 1,042 miles, would be $17,062,541.60. And for 1,820 miles, or the whole line of the Union Pacific, the cost would be $29,802,136.

The Union Pacific Railroad Company was organized to build from Omaha to Ogden, only 1,042 miles, but by consolidations with two other companies it has come to own 1,820.09 miles within its own corporation, and has built besides 2,872 under twenty-two companies. Out of the aid given for the building of the 1,042 miles, this company has built and acquired 4,892 miles, under twenty-five companies in all, the maintaining of which is charged against the original company.

It may be presumed, and doubtless will be agreed, that the best possible presentation of argument against the passage of such bills as I have introduced is to be found in the pamphlet copy of the report of the remarks of John F. Dillon, counselor, who appeared last February before our Committee on the Pacific Railroads in behalf of the Union Pacific. I will refer to and endeavor to reply to the salient points in Mr. Dillon's argument.

On page 27 he says that the company has an outstanding indebtedness in land-grant mortgage of $10,400,000. This is not true, since on December 31, 1882, the president's report, at page 9 of financial statements, shows that the amount of land bonds then unpaid was only $4,670,000, and that to meet this amount there was due on sales of lands $4,617,401.03, leaving only $52,598.97 to be met. And to pay this amount of $52,598.97 the company had (page 13) 9,129,000 acres of land unsold, worth, at the same average as former sales, over $36,516,000. So that the company from its land grant practically owed but $52,598.97, since all the rest of the bonds had been paid off, or had applicable an amount whereunto to pay, with the exception of this small sum. Instead, therefore, of the inference being as he tries to show, the company had practically $36,460,000 worth of land, from the

sales of which the $27,000,000 as bonds can be paid without even trenching on the income from traffic. This is cited in order to show his audacious statement of pretended facts.

If he is not willing to allow the receipts from the whole line of road and from all sources to be taken into consideration in computing net charges, then of necessity the disbursements which he claims must be disallowed, and his table on page 30 will present a different appearance.

The items to strike out would be: Land grant, $323,610; Omaha Bridge, $221,000; new construction and equipment, $4,247,189.78; as also the item of $1,630,080, which would leave the net earnings $9,759,326.19, or nearly 20 per cent. on the cost of $50,000,000 to which he refers.

By reference to President Dillon's report, on pages 12 and 13 (financial statement), I find that the receipts for sales of Union Pacific and Northern Pacific land grants to December 31, 1882, were $17,960,100.80, with a balance unsold of 14,465,000 acres; which at the same rate of sale will bring $65,092,500, making the value of the lands granted $83,052, or an amount in excess of the present funded debt. And the amount added to $44,605,282.57, the amount in stocks and bonds of other companies, &c., as shown by page 2 of financial statement, in Union Pacific annual report to company, would about wipe out all of the debts of the company, leaving the stock account out of consideration.

In order, however, to ward off the passage of such acts as my House bills 99 and 1803, the company, instead of applying surplus receipts to reducing debt, has used them in buying up competing lines or acquiring them by consolidation or lease. So, also, the surplus has been used in building so-called feeders, many of which were not needed and were losing investments. I shall annex to my speech a list of these side lines for convenient reference.

The president of the Union Pacific, Sidney Dillon, reports to the stockholders for transactions ending December 31, 1882, as follows:

Gross earnings for the year		$22,823,884 24
Operating expense and taxes		10,727,049 28
Surplus earnings		12,096,834 96
Interest and dividends from investment securities		2,211,099 35
Total surplus earnings		14,307,934 31
Payments:		
Interest on bonds	$4,976,203 93	
Discount, interest, and exchange	172,722 31	
Sinking funds	442,000 00	
Amount due the United States on business of the year	2,097,189 90	
Premiums paid in bonds redeemed and losses in securities disposed of	18,923 16	7,707,039 03
Balance applicable to dividends		6,600,895 01
Stock dividends, 7 per cent.		4,260,788 00
Surplus for the year (over all)		2,340,107 01

This is from the Union Pacific report to stockholders, page 6. At the bottom of the same page is found in italics:

The gross earnings of the Union Pacific system, including branch lines, amounted to $30,363,927.75 for the year 1882.

By looking at page 7 of the same annual report (for 1882) you find the gross earnings named in foregoing table to be:

From transportation of passengers	$5,197,730 01
From transportation of freight	15,402,167 37
From transportation of mail	746,515 61
From transportation of express	748,932 30
From miscellaneous earnings	728,538 95
Total	22,823,884 24

Again, in page 24 of the financial tables, same report, I find the operating expenses are—

Conducting transportation, including superintendence, dispatches, clerks, station service, station expenses, station repairs and furniture, repairs of tenement houses and hotels, train service, train expenses, advertising, books, printing and stationery, telegraphic expenses, loss and damage, foreign agencies, use of cars, and incidentals		$2,392,498 72
Motive power, including superintendence and clerks, locomotive service, fuel and water expenses and repairs, fuel for locomotive, oil, tallow and waste, repairs of locomotives, repairs of shops and machinery, fuel for engine houses and machine shops, also incidentals		3,775,888 47
Maintenance of cars, including superintendence and clerks, repairing cars, car shops and sheds, watchmen, and incidentals		957,943 44
Maintenance of way, including superintendence and supervision, repairs of track, removing snow and ice, renewal of rails and ties, repairs of bridges, fences, crossings, and guards, and telegraph, engineering, protection of river banks, wrecking, and incidentals		2,638,635 74
General expenses:		
Taxes	$487,786 54	
General expenses	474,296 97	
		962,883 51
		10,727,049 28

You will observe that in this every possible item of expense is included pertinent or otherwise to the running or maintaining of the road. Also, that the company had to keep the road in repairs, paid running expenses and interest added to the sinking funds, and still had over all $6,600,895.01 surplus earnings to be applied to dividends; and this, too, only from the general income. They had still a further income, as seen at page 17 of the report, where Mr. Sidney Dillon makes a summary statement under the heading, "Operations for 1882." He says that it will be seen by the financial statements that the surplus general income, after payments of fixed charges of Government requirements and of 7 per cent. dividend to stockholders, amounted to $2,340,107.01, which is equal to 3.845 per cent. on amount of capital stock.

Surplus land and trust income, $1,088,495.60, which is equal to 1.788 per cent. on amount of capital stock; surplus income used for sinking fund, $442,000, equal to .756 per cent. on amount of capital stock; surplus special United States income accounts, $116,440.37, which is equal to .191 per cent. on amount of capital stock; total additions to surplus for 1882 in excess of dividends of 7 per cent., $3,987,042.98.

So that, taking the words out of their own mouths, they are convicted of making a net profit over all charges of 13.55 per cent. on the amount of the capital stock of the company.

There seems to have been a fear that the net earnings would be too great; hence large sums of money have been expended in permanent improvement which can not occur each year, and which should not be charged to operating expenses, all in one year.

Thus, at page 11, President Dillon says that 16,854 tons of steel rails were laid, 690,637 new oak, cedar, and pine ties, to replace old; six iron truss-bridges built; ninety pile bridges built; thirty-seven miles of new side-track constructed.

Again, at page 18, he says:

The policy of securing for the company and its stockholders by a judicious investment of its means and earnings, as before stated, not only the tributary business resulting from branch lines, but also the annual profits of their operation and the income from the lucrative investments in them has been fully vindicated. In carrying out this policy it has been necessary at times to make considerable temporary advances or investments. But this has been done without inconvenience to the finances of the company * * * A large portion of the annual surplus earnings of the company has been applied to improving the line of railway, thereby lessening operating expenses, and to the creation of tributary lines and in promoting local business, and has partially matured its fruits during the past year.

In this connection it may be well to call attention to those so-called tributary lines, as seen by page 12 of the report. They are:

CONNECTING RAILROADS.

The lines of railroads connecting with the Union Pacific Railway and operated under its control were extended during 1882 as follows:

Utah and Northern; Oregon Short Line; Laramie, North Park and Pacific; Omaha and Republican Valley; Greeley, Salt Lake and Pacific; Manhattan and Blue Valley; Denver, South Park and Pacific. Total miles extended during year, 380.

And again, in same page:

The aggregate length of connecting railroads operated in the interest of your company (Union Pacific) in January 1, 1883, amounted to 2,872 miles, as follows:

Here follows a list of the above-described roads, and also the following:

Omaha, Nebraska and Black Hills; Colorado Central, Echo and Park City; Carbondale Branch; Junction City and Fort Kearney; Salina and Southwestern; Golden, Boulder and Caribou; Denver and Boulder Valley; Saint Joseph and Western; Central Branch Union Pacific and leased lines operated by the Pacific Railroad; Kansas Central; Manhattan, Almy and Burlingame; Manhattan and Northwestern; Salt Lake and Western, and Nevada Central.

I say that it now appears, even by the reports made by President Dillon to the stockholders, that the Union Pacific on the fictitious cost was able to earn net 13.55 per cent. on the capital. But Judge Dillon in his argument admits tacitly that the road, instead of costing $90,000,000, cost not over $50,000,000. Hence there was a stealing of $40,000,000, which was proved by the investigations of the Wilson committee. Thus it transpires that the net earnings are over 17 per cent. on cost.

Now, what is the cost as shown by the court records?

Pretended cost	$90,000,000
Less stealing, as shown by Wilson committee, being difference between bonded cost and cost to Credit Mobilier	40,000,000
Balance	50,000,000
Less stealings by officers of Credit Mobilier, as shown in Hazard *vs.* Durant, 11 R. I. Reports, and Durant *vs.* Hazard, United States Supreme Court	15,000,000
Balance	35,000,000

So that the net income is nearer 40 per cent. than 3 per cent.!

Mr. Dillon can not segregate the earnings arbitrarily, for the act of 1862 says that "whenever the net earnings of the entire railroad and telegraph line shall," &c. And if by consolidations, &c., the receipts are increased it goes to the credit of the original company, since the others are merged in it and have ceased to exist.

Then what would be the "cost" of these roads as contemplated by this act? The amount of money actually and in good faith paid in by the stockholders. This is the only true basis. And in taking this into consideration, you must of necessity cast aside all watered issues of stock and all pretended offsets from profits in building. It is clear that the company can not be allowed to pay interest on its indebtedness, and add a sinking fund to pay off such debt in time, and then include that debt as a part of the cost of the road.

The company in 1882 paid off $1,153,000 of its bonds, besides paying interest and adding to the sinking fund. In time this sinking fund

will be large enough to wipe out the debt, since the amount included as annual expenses includes also this object. The Union Pacific will then own the road free of debt. And the actual cost will then plainly appear to be only such sums as the stockholders have been out of pocket, or rather their absolute investment, howsoever obtained.

Whatever money was paid in, originally, for construction of the road, that is the cost. You can not under the law provide for the payment of principal and interest of a debt, and then at the same time and all along ask for 10 per cent. more upon the capital alleged to have been invested.

The land grant of the Union division was originally $10,400,000 in amount, less $5,730,000 paid off to December 31, 1882. This leaves a balance of $4,670,000 unpaid. But the company sold of this grant lands and town lots of the value of $4,617,400.03 in contracts, which amount will wipe out the land-grant bonds, except about $52,500.

After making the above deductions there were left on December 31, 1882, in this division 9,129,000 acres, worth about $30,000,000. This amount will in time be realized.

No one could be more fully or painfully conscious of the fact of the dry and extremely prosaic nature of such statistical papers as I have had to submit on this occasion. But the propriety and necessity for their introduction will not be denied or questioned; and I hope that they will have a careful reading when they shall have been published, as under all the circumstances I believe they are sufficiently conclusive for the purposes which I have announced, and which on behalf of the people whom I especially represent I have kept constantly in view.

In the first place, it was desirable and necessary in my judgment to make such general preface of statement and argument as I had the honor of submitting to the House Committee on Pacific Railroads on the 15th of February last. And in some sense my remarks addressed directly to the House may be considered as supplementary to the preface referred to. A sketch of my remarks before the committee, which I was obliged to print altogether at my own expense, will be furnished any member of the House or any reader of the RECORD who may desire them and who shall apply to me for a copy.

The defiance of the Pacific railroad monopolies, against whose outrageous and extortionate prices we are contending, whose passenger and freight rates we desire to have reduced and fixed and established by law of Congress, rests mainly on our alleged inability to discover or to even guess at the actual cost of construction of their roads. I submit again that in the light of what I have here made known there is sufficient and more than sufficient of reason and of right given unto us to enact into law such bills as I have presented to this Congress.

But these grasping monopolies have the coolness to claim that their charges are not unreasonable. Effrontery could not go beyond this!

I believe that I would be giving a full and satisfactory showing upon this point if I simply presented the comparison of receipts and charges on passenger trains on roads enumerated in the table which I shall shortly submit.

The deceit that is practiced by the Central Pacific Railroad in bringing in its commutation charges for travel on the Oakland Ferry route should be kept in mind when reading the "average rates" set down under that caption. I will not allow you to forget that.

I really need add but a few illustrations. Each one can multiply them for himself as he inquires and ascertains the charges for passenger transportation on lines radiating from any central point east of the Missouri River. It will be found, I assert, that the ticket prices on the Union and Central Pacific Railroad Companies for through passage are from two to three times as great as on any routes east of the Missouri River where anything like near half the amount of distance is in the basis of calculation.

The price of a first-class ticket from Washington to Chicago is less than $20 ($17.50 for a first-class single trip and $21 for a round-trip ticket). At the estimate of $20 per passage from here to Chicago, the price of a first-class ticket from Omaha to San Francisco should not exceed $45. My bill would permit a charge for the latter distance of $54. The Pacific railroads demand at the Omaha and San Francisco offices for transportation of the 1,800 separating miles, $95. At all intervening points where there is no competition the local rates run from 7 to 10 cents per mile. And this over roads built by the price of the people's land and the loan of the people's bonds; roads on which, taking everything into consideration, the fare should be as cheap as on any iron highway on the face of the globe.

I will give some specimen charges for passenger transportation, showing the unreasonableness of the present exaction and the very moderate reduction as compared with ticket prices on other roads, which my bill—House bill No. 99—proposes.

The rates stated and compared will be for long distances. Still greater and grosser extortions than those exhibited exist with respect to local traffic—the movements between adjoining towns or stations, &c. There, I repeat, the maximum of 10 cents per mile is often adhered to if there be no competition, and fractions of miles are counted as integers.

But let me first have read a comparison of rates and charges on passenger trains according to reports in 1883, thus establishing the "unreasonable" and extortionate charges of the Union Pacific and Central Pacific Railroad Companies.

Comparison of rates and charges on passenger trains, according to reports in 1883.

Name of road.	Run by passenger trains.	Passengers.	Passenger earnings.	Net earnings per mile from all sources.	Rates.				Operating expenses to total earnings.

* Oakland Ferry. † About.

NOTE.—The passenger earnings in this table include all income reported as the result of earnings of passenger trains. Items relating to New England roads are from Massachusetts reports.

In this table the comparison of passenger earnings includes also receipts for mail, express, baggage, &c. And these amounts have been added also in the case of the Union Pacific and Central Pacific, instead of the mere item of fares reported by the Union Pacific as $5,197,799.96, and by the Central Pacific $7,474,216.12. Bear in mind that the Central Pacific brings its "average" down by counting in 5,896,159 passengers that merely crossed the Oakland ferry, largely on commutation tickets. In like manner the Union Pacific rates shave rates in competition for some distance with the Burlington and Quincy, which coercingly helps the management in the public appearance on an average rate showing.

It should always be borne in mind that a reduction of fares—passenger and freight—on the Union and Central Pacific Railroads operates as a reduction of passenger and freight fares on the Southern Pacific Railroad. Forget it not. It is expressly so provided in the Texas Pacific Railroad bill, which passed Congress in 1871. Section 15 of that act reads:

Provided further, That the rates charged for carrying passengers and freight per mile shall not exceed prices which may be fixed by Congress for carrying passengers and freight on the Union Pacific and Central Pacific Railroads.

The distance from San Francisco to Ogden is eight hundred and ninety-five miles. That is estimating the number of miles by the longest route. By the route now taken by the overland trains via

Benicia there is a saving in distance of about forty miles. There is some cheating by the railroad company in its published tables on this very account. But with characteristic liberality I will take the aggregate of miles as eight hundred and ninety-five. Now, for a first-class passage from San Francisco to Ogden the Central Pacific Railroad Company charge $56. For traveling the same distance on the New York Central, supposing its lines to be extended under New York jurisdiction for the same distance, the charge would be less than $18—less than one-third the amount charged by the Central Pacific Company—and that for much better accommodations and more than twice the speed. Does the difference in amount of patronage in favor of the New York Central road, which was built by private capital, justify any such enormous addition to the cost of travel?

Under the provisions of my passenger-fare bill the cost of a first-class ticket from San Francisco to Ogden would be $26.85, a reduction of $29.15. By my bill a second-class ticket for the same distance would cost $17.90. A third-class ticket would, under the provisions of my bill, cost $13.42½.

The estimated distance from Ogden to Omaha is 1,032 miles, making an aggregate from San Francisco to Omaha (by the longest rail route from San Francisco to Sacramento) of 1,927 miles. By the route now traveled by the locomotive the distance is 1,875 miles. For a through ticket the charge is, as I have already stated, $95—the railroad companies having within the past few months been good enough to make a reduction of the enormous sum of $5, a concession to popular appeal respecting which the flunky newspaper organs of the monopolies have not yet ceased to vibrate.

At New York Central prices the charge for this distance, at highest rates, would be $38.54, or, taking into the sum the actual distance traveled, it would be $37.50. Taking the average rates of the New York Central, the charge for a first-class ticket from San Francisco to Omaha would be $34.69. Taking the average rate of the Rock Island and Pacific (and why should not through rates on the Pacific railroads be as low as average charges on the Rock Island road?) the charge would be $48.27. Under the operation of my bill the price of a through ticket from San Francisco to Omaha would be $57.81, or a difference as against the present charge of $37.19. Still, it will be observed that my reduction would leave the price nearly $10 more than the average rates of the Rock Island and Pacific, and $20 more than the price according to the highest rates on the New York Central.

For a second-class ticket from San Francisco to Omaha, under the provisions of my bill, the price would be $38.54—the same sum, it will be observed, that would be charged for a first-class ticket according to the highest rates of the New York Central. For a third-class through ticket the price, under my bill, would be $28.90½.

The price of a first-class ticket from San Francisco to Reno, Nev., is $12.05. There is no second-class ticket sold for this distance, as I am informed by a letter from W. D. Phillips, ticket agent at Reno, dated February 12, 1884. Under my bill a first-class ticket from San Francisco to Reno, a distance of three hundred and six miles—a section of the Central Pacific Railroad on which there is a vast amount of travel—would be $9.18; while a second-class ticket for the same distance would cost $6.12, and a third-class ticket would be sold for $4.59.

I call the attention of this House, as I shall desire the especial attention of my constituents, to these figures.

Would you believe it? The Central Pacific Railroad Company charge the same amount for a ticket from Reno to Omaha that they charge for a ticket from San Francisco to Omaha—$95 first class, $75 second class, and $50 third class. Under the terms of my bill the prices would be respectively $48.63 first class, $32.42 second class, and $24.31 third class. As has already been stated or indicated, from Reno to Ogden the road-bed is for a great portion of the distance laid on what may be termed a dead level. And yet to illustrate the rapacity of this company and to show the excellence of my measure, I draw notice to its effect upon ticket charges from Reno to the terminus in Utah.

The present charge from Reno to Ogden is $44 first class, $40 second class, and $30 third class. Under my bill the ticket price would be, respectively, $17.67 first class, $11.78 second class, and $8.83½ third class.

The distance from Reno to Winnemucca is one hundred and sixty-nine miles; and for that distance the charges under my bill would be, respectively, $5.07 first class, $3.38 second class, and $2.53½ third class. These are certainly prices to which the people are entitled upon a road built by the people's money and the proceeds of the people's land—over a route the greater portion of which is as level as the floor immediately in front of the Reporter's desk.

The distance from San Francisco to Los Angeles by the Southern Pacific route is four hundred and eighty-two miles. The first-class ticket charge now is $20. And in this connection I will mention that the charge for a ticket from San Francisco to the station opposite Bakersfield, a distance of only three hundred and fourteen miles, is $17. When Mr. Charles Crocker was on the witness-stand before the California railroad commissioners last year, he was asked with respect to this extortion: why there was such an exorbitant sum asked for a ticket to travel three hundred and fourteen miles when $20 was the price of a ticket of the same class for a distance of four hundred and eighty-two miles. He blasphemously referred his questioner to God Almighty. There spoke the spirit of these defiant monopolists who have grown fat on the gifts of a generous people, whom they have repaid for their generosity by extortionate tolls; who expect to continue their course in greed and rapacity by persevering in the path of corrupting legislators, judges, and jurors—supported in their infamous career by owned and leased lines of journalism throughout the land.

Under my bill tickets of the three classes from San Francisco to Los Angeles would be $14.46, $9.64, and $7.23. To Bakersfield the charge would be, respectively, $9.42, $6.28, and $4.71.

From San Francisco to the town of Modesto, taking the Railroad Gazette estimate of miles, the ticket prices would be $3.42, $2.28, and $1.91. This would be less than present round-ticket charges for a first-class fare; while second-class accommodations (which in Europe are even better, all things considered, than are afforded by our Pacific railroad magnates in their best division) would be extended to every point on the road. Modesto, I should remark for the information of those who are not familiar with our California railroad geography, is within a few miles of the point of regular water competition, while it is located adjacent to the banks of a river that is navigable during many months in each year.

Probably I have given illustrations enough—cramped as I am for space on this occasion. And, of course, it is the simplest matter of calculation. But there is persuasion and argument in the printing of the figures. I hope that every future reader of my speech who lives along the line of these iron highways or in their vicinity, necessarily a patron, will not fail to make his own calcu'ations, as I feel sure that he will thereby be stimulated to renewed exertions in behalf of this cause of practical reform, which I long ago espoused and in behalf of which I now earnestly appeal to the all-powerful Representatives of the American people in Congress assembled.

Inquiry has already established the fact that with respect to the charges for the transportation of goods, the "unreasonableness" has been even more stupendous than that which has characterized the demand for passenger conveyance. Immediately prior to my appointment for consultation with the Committee on Pacific Railroads I applied through friends in San Francisco at the central office of the Central Pacific Railroad Company for a copy of the freight schedules of that organization. My messenger was informed, as I myself had been informed before him, that the freight schedules of the company were for the information of the employés and not for general publication. It may have been observed that in my bill providing for a reduction of freight charges (House bill 1803) I provide for the posting of freight schedules of convenient description at each and every station along the route.

When I came to address your committee I stated and regretted my inability to present the latest freight schedule of our California company, whereupon one or more of the attorneys for the monopolies promised that such a record should be immediately forthcoming for the inspection of members of this House. I have not as yet been supplied with a copy, but I presume that my friends in the committee have been furnished with one or more, according to the assurance given.

As to the actual and relative height of the charges for freight transportation: what of that? My bill proposes a reduction of 30 per cent. It will not be denied—it has not been and can not with any degree of conscience be denied—that where there is no competition on the line of this route the freight charges of the Union and Central Pacific Railroads are fully twice as much as on roads east of the Missouri River—distance and grade and cost of construction all being fairly taken into consideration. Indeed, the claim has been made boldly and emphatically before our State Legislatures that these roads were entitled to charge twice as much for the same distance as any of the Eastern roads. Still, the claim is reiterated that the charges are "reasonable."

But if this House should think that 30 per cent. is too great a reduction at the outset—a main and most desirable object now being to establish the right of the Government to make such reductions—I shall not object, if I can get my bills up out of this Committee on Pacific Railroads, to a subtraction of one-third of my cutting. That is to say, I shall not object to an amendment providing for an abatement of only 20 per cent. upon the freight-schedule prices in existence on the day when this session of this Congress assembled.

With respect to this let it be stated—for a general confirmation as to justice and propriety: one of the majority of the railroad commission in California, which is said to be under the control of the Central Pacific Railroad management, is reported to have proposed within twelve months (the record at my command at this moment does not give the exact date) an average reduction of over 20 per cent. How, then, could the Central Pacific Railroad Company be heard to complain of such a law by Congress enacted?

Moreover, subsequent to the introduction of my passenger-fare and freight-fare bills, with the preamble to which I have drawn especial attention, a bill, copying substantially the same introduction and unnecessarily adding the argument of right which grows out of it, was offered in this House and in the Senate. It was introduced in the House by a member residing in a State through which the Union Pacific Railroad and many of its branches are built, and who, it may

be presumed, at that time fairly represented the intelligent wish of his constituents. It was introduced in the Senate by a gentleman who also represents a State largely traversed by the Union Pacific Railroad, and for whom similar respect for the demands of the people of his Commonwealth may be assumed. This bill so copied had a section of declaration—one section declaring that from and after passage and approval of the same freight charges should be reduced on the Pacific railroads 50 per cent. without regard to classification.

Now, of course this bill did not and never could amount to anything in a practical point of view. Perhaps it was never intended that it should. I say this without any disrespect to the introducers. But the fact remains that two gentlemen, who are supposed by their location to be themselves already, by the instructive action of a great majority of their constituents, well informed and earnestly urged to action in behalf of right and justice in the premises, did follow my introduction with such a presentation, calling for 20 per cent. greater abatement of charges than is nominated in my legislative proposition.

Mr. Speaker, there is no Senator or Representative from any State or Territory—and I speak not to challenge them but with confidence to utter for them—through which these roads do pass who will dare to get upon this floor and oppose such measures as these. If anything is said from such sources it must be in favor of the passage of bills of this character; so that, for this among other reasons, the only way in which these railroad monopolists can prevent this species of righteous legislation is to adopt the policy and plan presented in a sentence by Colin P. Huntington in one of his letters to David D. Colton: "Kill it in the committee." How kill it, Mr. Speaker? Smother it. Glut the committee with other bills about other matters. Distract the attention of the honorable gentlemen who compose the committee, and who are anxious and zealous to inquire into the propriety and expediency of recommending such measures as these, if they can only get time to look at them; and as, perchance, the happiest scheme of all in this relation, send down upon that committee bills which shall affect directly or indirectly these passenger railroad corporations in any or every other possible manner, save in the line of reducing the charges for transportation which are by these great monopolists, corrupters, and oppressors imposed upon the people of this country.

Not satisfied with charging an exorbitant sum for the transportation of through and local freights, the Central Pacific Railroad Company are accustomed to charge the patron who resides along the line of the railroad east of the city of Sacramento for what is known as an "advance," a sum sufficient to pay the cost of transportation of westward-bound freight from San Francisco or Sacramento back to the point of delivery. To illustrate: take a car-load of goods which are to be delivered in Winnemucca, in the State of Nevada. I select this point because there are bills of lading or consignee papers in the records of this House already having reference to impositions at that locality of the character described. The consignee at Winnemucca is charged for transporting his car-load of goods to San Francisco and back again to Winnemucca, even though the actual nominal delivery is made immediately upon the arrival of the freight-car containing his property at his place of business! Evidence on this subject will be found on pages 183 to 186, inclusive, of the Appendix to the CONGRESSIONAL RECORD, volume 11, part 3, for 1880–'81.

This process is worked at all angles. I hold in my hand three papers which I received from Thomas McConnell, of Elk Grove, Sacramento County, California. They are dated, respectively, Sacramento, June 28 and July 2, and August 13, 1883, and are numbered 470, 505, and 796. The "charges advanced" for wool consigned from Winnemucca to Boston, Mass., are $205.60, $205.90, and $243.40. In other words, Mr. McConnell is charged for shipping his wool from Winnemucca to Boston the same as though the wool had been brought to Sacramento and thence dispatched to its ultimate destination.

While the freight-fare bill which I have introduced is not specially, in any of its express terms, adapted to the curing of this evil or stopping this outrage, I could contend that the practical effect and outcome of administration under this bill as a law would be to destroy all this class of impositions. At the same time I desire to have it understood that I did not wish to trespass upon the legislative ground, so to speak, of any other and former Representative in Congress.

In my remarks before the committee, to which I would like to direct the notice of all who are or may become earnestly engaged in the consideration of this subject, I stated, I think, clearly the reasons which induced me to offer the particular kind of a bill for freight regulations on the Pacific railroad which I have before me. I am far from disparaging any other Representative's work in the premises. But I do insist that propositions such as these are direct, and deserve first and foremost and final attention at this session of Congress. Over and over again let it be said, until no man can claim to have misunderstood the indisputable announcement: the people want reasonable passenger and freight fares upon their iron highways. And above all places where they are entitled to expect and to call for such reasonable charges, and nothing over, the Government-subsidized railroads of this land are the lines on which the summons should fall and force a "reasonable" tariff.

I have spoken elsewhere of apparently interminable disputes and wrangles over figures upon figures the moment you enter upon specific nominations of prices for freight-carriage, as against the excessive tolls set down by the railroad magnates. This is a horizontal cut that deserves respectful recognition because it takes these monopolists at their word, and touches their one single treasure-house of profits. They tell you that they understand all about the proper discrimination in freight-charges: fairly and justly considering the nature and the value of the goods transported. I suggest and submit: at the beginning, take them at their word. Assert the existing, the too-long slumbering power of the National Government over the railroads built by the loan of the people's bonds and the gift of the people's land; shave off 20 or 30 per cent. on their own schedule charges. Then let them come forward, if they wish to, and show, if it is possible, a single instance where the reduction is unreasonably large. At all events let us go forward from this aggressive action, studying facts and effects with a view, if possible, if reasonable, to still greater subtractions, with perhaps nicer discrimination begotten of our own later and more minute inquiries and discoveries and demonstrations.

The people endowed these roads with the just and firm expectation of reasonable passenger and freight fares on them. That expectation is manifested in the terms of the charter act. And in the wisdom of legislation that did exist at the time of the enactment of the original incorporation bill there was expressly reserved the right of control and reduction in this department. And the right existing on the one hand, while the wrongs—but faintly indicated—exist and have long existed on the other hand, there is by the coincidence and the conjoining a demand resting upon the consciences and the enlightened judgments of the Representatives of the people of the United States. I respectfully call for consideration for such bills as these. I ask attention to the fact that they have been put aside in the committee-room, while measures subsequently introduced—as to the merits or demerits of which I am not now about to speak—were taken up and made subjects of contemplation and of action. I am not deceived about this matter, and I am resolutely determined the people of this country shall no longer be deceived. It is important that the Treasury of this nation should be saved from loss; it is more important, and in such relation it is most important, that highways built by the people's contributions, over which the chartering law places the people's Representatives, should afford the people the best possible facilities of conveyance for the lowest reasonable sum.

Citizens in every section have an interest directly in this subject. Mutually we stand interested before and in the halls of legislation. A trip to Europe, with the finest luxuries of civilization for less money (and with as much dispatch) than you can journey across your own continent, on dry land all the way, on roads which for two-thirds of the distance were constructed by your own contributions! California and Oregon are rapidly becoming, in proportion to their area and in some respects out of all proportion to their acreage, the greatest grain and fruit and wine growing sections of the world. You, needing, not for luxury but to supply necessities of civilized life, the products of our wonderful soil—developing and delivering in unrivaled abundance unto the most delicious perfection, under our "glorious climate." You anxious to visit us and look upon the magnificent outer limit of your mighty Republic, with its wonders of nature which belittle all that was ever seen before or that elsewhere can be beheld. We anxious to have you come: come with your wives and children if possible; the best among you, come and abide. As strangers and pilgrims, yet fellow-citizens, or as permanent dwellers, welcome to our borders! Are there not reasons innumerable springing up, upon careful and far-reaching reflections, which conspire and concentrate to make us heartily in unison with respect to these propositions? Shall they be brought out of the committee at this or at the coming session of Congress? I put it to you, O men in whom your country has lodged the power to reply. There is such a thing as public sentiment within this Chamber. I told my immediate constituency that if I introduced reasonable measures upon these subjects no committee should smother them in their closets if I could possibly prevent that Huntingtonian method of killing. And I intend to the uttermost to endeavor to keep good my plighted word.

Self-admonished of the unusual length to which my remarks have already been extended, and well satisfied that there is no necessity for the promotion of my present purpose that I should go into detail of statement or illustration, paragraph by paragraph, with respect to the unreasonableness of the freight charges of the Pacific roads that were built with the aid of the people's money and the gift of the people's land, I shall here principally content myself with referring to the schedule of transcontinental charges that will be appended to my speech when published in the official RECORD. More than three-fourths of the amount charged is exacted by the Pacific railroad companies, which cover less than two-thirds of the distance. Surely it will be sufficient at this time to state the fact that the party conventions of the States of California and Nevada have for more than ten years last past presented to the people a plank in their platforms by the terms of which the Central Pacific Railroad Company has been arraigned for excessive freight charges; and legislative and other candidates were pledged to do all in their power in their respective offices to abate the extraordinary and oppressive tolls. In my own Commonwealth the two parties have vied with each other on more than one occasion to see which

would present to the people the severest and consequently the most satisfactory emphasis of instruction and pledge in this concededly most important particular.

Had I the space I would like to present something like a sketch of the history of California politics, of California party promises with reference to this, with us, all-absorbing question of railroad transportation charges.

By every warrant and justification that can come from a practically unanimous sentiment of a great State, which I as a Congressman at large represent, I respectfully serve notice of appeal upon this body of Representatives. I beg you to hear my people and give ear of audience and of anxious desire to respond to their reasonable petition.

May I be pardoned for a word of almost personal privilege interjected here? Nearly twenty years ago, when a citizen and State senator in Nevada, I foresaw the rising might of this reckless and relentless and corrupting and tyrannical monopoly. I spoke of my foreboding from the seat to which my county had sent me. I did what I could under the circumstances at that time to secure legislative expression from that State, which would so operate as to prevent the monopoly that was threatened—at least so far as the people of the Pacific States were concerned. That matter is upon the enduring record.

The debauching influences which these unscrupulous Central Pacific Railroad incorporators have since so banefully exercised soon began to be felt and to excite general public recognition and alarm. With increasing strength of money and employment that demoralizing, that afflicting influence has been extended. As a consequence there have been numerous and earnest efforts by the good people of our coast, in the two States which I have named—more particularly in the State of California—to disenthrall and to emancipate both in a business and in a moral sense. Organization after organization, as well as man after man, has been captured by these abominable creatures, after there had been a demonstration of ability to work out some good palliating results. And to-day in the metropolitan city where I reside there are shameful exhibitions of that moral turpitude that finds its illustration in recreancy to party pledge; as indeed there are at almost every town of considerable importance upon the Pacific coast. But the mass of the people are true and firm, up to the line of their enlightenment and their understanding upon this subject. And, God helping me, I intend to represent the masses of the people; and I claim that I am so doing at this moment in the making of this address to my fellow-members of this House of Representatives.

There need be and there will be no conflict of jurisdiction or of action developed by the operation of such measures as I have introduced—no conflict with the fair and just and legitimate proceedings of State boards of commissioners in any of the Commonwealths through which this continuous line of railway, built by the people's contributions, finds its passage. Be you assured there will be no jealousy on this account between the acting parties indicated or included, or the voters whom they respectively represent. I must leave to each hearer's and reader's own reflections—if I may use that word with respect to a matter that seems so obvious—questions such as these. They need no argument or assurance. There is harmony of hope and expectation all along the one continuous line, among the people who have immediately to do with the business management and control of the Pacific railroads named in my bills.

As these monopolists have delighted and still desire to fumble and frolic and distract and confuse and delay and demoralize and defeat by arithmetical calculations, that, to say the least, are far within the mark that is put down in these proposals for legislation, so will they endeavor to stir up all manner of petty envies, so they will not hesitate at making any bold statements of untruth which in their judgment or the judgment of their agents and emissaries are adapted to prolong into weariness the consideration of this momentous issue, suggesting side and irrelevant and less important topics for debate and division, or meeting the live and most essential questions of reform with falsehoods of every type and slanders of every hue.

In our State conventions the resolutions have been clear and explicit. The honest delegates have ceased to make them general; the secretly-bound convention members dare not leave them enigmatical, as once or at first they may be said to have been. It appears that we have not arrived at that stage in our national life when the leaders of either one of the two great political parties of the past and present deem it wise or expedient to explicitly mention these subjects in the national convention platforms. But I hesitate not to say that the party whose Senators and Representatives in this Congress voted with practical unanimity for the passage of these measures would be absolutely certain of overwhelming victory at the polls in November of this year. I will not forbear to state that if a majority of the Representatives of my own party on the floor of this House and in yonder Chamber should unmistakably indicate hostility to this kind of proposed legislation there would not be a shadow of a shade of reasonable hope or expectation for Democratic success in this Presidential campaign. I think that I speak advisedly. These subjects must be given a place, without evasion or equivocation, in the national platforms of the two great organizations that now exist, or a party by another name will rise in the land, which without being led aside to consider other worthy topics of reform will present this, prominent and isolated, and win a national triumph upon it. I say this without boasting for my cause or assuming too much for my judgment and conviction as to the future.

I came here to speak, because the masters of monopoly and their attorneys in my Commonwealth for once slumbered in their watch, and knew not of my popular strength in the interior of my State. I shall not return, nor ever again have influential office elsewhere. In the language of our illustrious party leader and ex-President-elect of the United States, Samuel J. Tilden, I can say with appropriate paraphrasing that on the 4th of March, 1885, I shall but submit to the will of the railroad and telegraph monopoly tyrants of the land in considering my public official life forever closed. The which I do herewith admit and proclaim, because it contributes to establish the disinterestedness of my present appealing, soliciting, warning, and, as I sincerely trust, patriotic utterance in this presence and before all the people of the Republic.

APPENDIX A.

Central Pacific Railroad Company of California.

ARTICLES OF ASSOCIATION.

First. The name of this association shall be the Central Pacific Railroad Company of California.

Second. The number of years the same shall continue is fifty years.

Third. The amount of the capital stock of this company shall be $8,500,000, divided into shares of $100 each.

Fourth. The names of nine directors to manage the concerns of the company are—

Leland Stanford, of Sacramento.
Charles Crocker, of Sacramento.
James Bailey, of Sacramento.
Theodore D. Judah, of Sacramento.
L. A. Booth, of Sacramento.
C. P. Huntington, of Sacramento.
Mark Hopkins, of Sacramento.
D. W. Storey, of Dutch Flat.
Charles Marsh, of Nevada.

Fifth. The places from and to which the proposed road is to be constructed are the city of Sacramento and the eastern boundary of the State of California.

Sixth. The counties into and through which this road is intended to pass are Sacramento, Placer, and Nevada.

Seventh. The length of the road, as near as may be, is one hundred and fifteen miles.

Eighth. The names of five commissioners to open books of subscription to the stock are B. F. Moore of Dutch Flat, E. G. Waite of Nevada, Edward J. Brickell of Illinoistown, E. McLaughlin of Grass Valley, Samuel Cross of Sacramento.

Ninth. We, the undersigned, do hereby subscribe to the above articles of association our names and the amounts of the stock taken by us, respectively, in said Central Pacific Railroad Company of California.

STATE OF CALIFORNIA,
City and county of Sacramento, ss:

Be it remembered that on this 27th day of June, 1861, personally appeared before me, the undersigned, a notary public in and for said city and county, Leland Stanford, Mark Hopkins, and C. P. Huntington, three of the directors of the within-named Central Pacific Railroad Company of California, and being by me duly sworn, say that the stock to the amount of at least $1,000 for every mile of the railroad intended to be built by said company, to wit, an amount of stock exceeding $115,000, has been in good faith subscribed by the members of said company, and that 10 per cent. on the amount of stock subscribed as aforesaid has been actually in good faith paid in cash to Mark Hopkins, the treasurer appointed by the directors named in the within articles of association, and that the subscribers of said articles of association are all known by some one of said ——— to be the subscribers thereat, and to be the persons so represented.

LELAND STANFORD.
MARK HOPKINS.
C. B. HUNTINGTON.

Hereby certify that the foregoing affidavit was duly subscribed and sworn to by said Leland Stanford, Mark Hopkins, and C. P. Huntington by and before me the day and year aforesaid. In testimony whereof I have hereunto set my hand and official seal this 27th day of June, A. D. 1861.

[SEAL.] E. P. SWIFT, *Notary Public.*

APPENDIX B.

Amended articles of association of the Central Pacific Railroad Company of California.

Whereas it has been ascertained that the capital stock of the Central Pacific Railroad Company of California is less than is necessary to complete, operate, and maintain the railroad of said company, and that it will require at least $20,000,000 for that purpose; and

Whereas the State of California, by an act entitled "An act to authorize the incorporation of the Central Pacific Railroad Company of California, and other matters relating thereto," approved April 17, 1863, authorized and empowered the said company to make and file amended articles of association in the manner therein prescribed; and

Whereas the board of directors of the said company have deemed it necessary and proper to amend the articles of association of the said company:

The said board of directors, at their regular meeting held on the 1st day of October, 1864, adopted the following as the amended articles of operation of the Central Pacific Railroad Company of California, to wit:

Article first. The name of this association shall be the Central Pacific Railroad of California.

Article second. The number of years that this association shall continue is fifty, commencing from the date of the original articles of association of this company, to wit, the 27th day of June, 1864.

Article third. The amount of the capital stock of the company is increased to and shall hereafter be $20,000,000, which shall be divided into 200,000 shares of $100 each.

Article fourth. The number of the directors to manage the affairs of this corporation shall be seven. The names of the present directors of this company are: Leland Stanford, C. P. Huntington, Mark Hopkins, Edwin B. Crocker, E. H. Miller, jr., of Sacramento, Cal.; A. P. Stanford, San Francisco, Cal.; Charles Marsh, of Nevada, Cal.; D. W. Storey, of Dutch Flat, Cal.; Lucius A. Booth, of Virginia City, Nev.

Article fifth. This association is organized for the purpose of constructing, operating, and maintaining a railroad with the necessary and proper branches and extensions. The route of the railroad proposed to be constructed, operated, and maintained by this company as selected by this company is from and to the following points, to wit: From the city of Sacramento, in Sacramento County, California, to the eastern boundary line of the State of California at or near the place where the said line crosses the Truckee River and running through Roseville at the junction of said railroad with the California Central Railroad, and by or near to New Castle, Auburn, Neilsburg, Illinoistown, Gold Run, Dutch Flats, Bear Valley, Crystal Lake, Summit Valley, and Downer Pass, together with such branches and extensions of the said railroad as the board of directors of this company may at any time deem necessary and proper to construct, operate, and maintain, and which this company is or may be authorized to construct, operate, and maintain by the laws of the State of California or other States or Territories or the acts of Congress of the United States now in force, or which may hereafter be enacted.

Article sixth. This association is also organized for the purpose of constructing, operating, and maintaining, owning, selling, or disposing of a telegraph line along its railroad with the branches and extensions thereof and such branches and extensions of said telegraph line as the board of directors of this company is or may be authorized to construct, operate, and maintain under and by virtue of the laws of the State of California and of the States and Territories and acts of Congress of the United States now in force or which may hereafter be enacted.

Article seventh. The counties of the State of California into or through which the said line of railroad from Sacramento to said place on the eastern boundary line of said State is intended to pass are Sacramento, Placer, and Nevada.

Article eighth. The length of the said railroad from Sacramento to the said place on the eastern boundary line of the State of California is as near as may be, one hundred and fifty miles.

In testimony whereof, we, constituting a majority of the board of directors of the said Central Pacific Railroad Company of California, under and by virtue of the laws of the State of California and on order of the board of directors of said company, adopting the said amended articles of association, have hereto signed our names and caused the corporate seal of said company to be hereto affixed, the 6th day of October, 1864.

E. H. MILLER, JR.,
Sec'y C. P. R. R. Co. of Cal.

Filed with secretary of state October 3, 1864.

OFFICE CENTRAL PACIFIC RAILROAD COMPANY OF CALIFORNIA.

Whereas the company is duly authorized to locate, construct, and continue its road eastward in a continuous completed line until it shall meet and connect with the Union Pacific Railroad; and

Whereas this company is now engaged in the work of thus locating, constructing, and extending its line of railroad east of the eastern boundary line of the State of California, and intend to continue the same eastward until it shall meet and connect with the said Union Pacific Railroad; and

Whereas it is ascertained that the amount of the present capital stock of the company of $20,000,000 is less than is necessary for the construction, completing, equipping, appointing, and maintaining of the road of the company when it shall be thus extended and completed so as to meet and connect with the said Union Pacific Railroad; and

Whereas it is ascertained that an increase of said capital stock of not less than $80,000,000, making the whole amount $100,000,000, is necessary for such completion, and the operating and maintaining of the road of the company as thus extended: It is therefore,

Resolved and ordered, That the capital stock of this company be increased to the said sum of $100,000,000.

Resolved and ordered further, That the third article of the amended articles of association of this company, bearing date the 6th day of October, 1864, be amended so as to read as follows, to wit:

"Article third. The amount of the capital stock of this company is increased to and shall hereafter be $100,000,000, which shall be divided into 1,000,000 shares of $100 each."

Resolved and ordered further, That the foregoing preamble, resolutions, and orders be submitted to a vote of the stockholders of the compay at their next annual meeting.

OFFICE CENTRAL PACIFIC RAILROAD COMPANY OF CALIFORNIA,
Sacramento, July 18, 1868.

STATE OF CALIFORNIA,
County of Sacramento, ss:

Mr. Leland Stanford, president, and E. H. Miller, jr., secretary of the said Central Pacific Railroad Company of California, hereby certify that the foregoing preamble, resolutions, and orders were unanimously adopted by the board of directors of said company at a regular meeting thereof had at the office of said company on the 13th day of July, 1868; that the same were submitted to a vote of the stockholders of said company at the regular annual meeting thereof held at the office of the company on the 14th day of July, 1868, and all stockholders voting at said annual meeting voted in favor of the same; that the holders of more than three-fourths of the capital stock of said company voted at said election, and voted in favor of said preamble, resolutions, and orders; and that said amendment to the articles of association of said company has been duly approved and now forms a part of the articles of association of said company.

Witness our hands and the corporate seal of said company, this 18th day of July, 1868.

[Seal C. P. R. R. Co.]

LELAND STANFORD.
E. H. MILLER, JR.

Filed by secretary of state July 23, 1868.

APPENDIX C.

[No. 2024.]

Articles of Association of the Contract and Finance Company.

[Through which Central Pacific Railroad directors contracted with themselves.]

Article first. The persons whose names are hereto subscribed hereby form and organize themselves into a corporation under and in pursuance of an act of the Legislature of California entitled "An act to provide for the formation of corporations for certain purposes," approved April 14, 1853, and the acts amendatory of said act, or supplementary thereto.

Article second. The name of said corporation shall be the "Contract and Finance Company."

Article third. The said corporation is formed for the purpose of engaging in and carrying on the business of constructing, purchasing, leasing, selling, holding, maintaining, operating, and repairing of railroads, wagon and transit roads, steamboats, vessels, telegraph lines, and rolling-stock of railroads; the purchasing, holding, hypothecating and selling of bonds and stocks issued by railroad and other companies or corporations; and also of iron and other material for railroad and telegraph lines; the borrowing and loaning of money, the express and stage business, and any and all other kinds of business connected with or pertaining to railroads and telegraph lines and the transportation of persons and property, on land and water, and the purchasing, holding, leasing, and selling of real estate of all kinds.

Article fourth. The business of the said company shall be conducted and managed and the corporate powers of said corporation shall be exercised by a board of three trustees, who shall be stockholders of the said company, who shall hold their office for the term of one year and until their successors are elected. The names of the trustees to manage the concerns of the company for the first three months are W. E. Brown, Theodore J. Milliken, and Benjamin R. Crocker.

Article fifth. The officers of said company shall consist of a president, secretary, and treasurer, and such others as may be established by the board of trustees. The offices of secretary and treasurer may be held by one person. The president must be a member of the board of trustees.

Article sixth. The amount of the capital stock of the said corporation shall be $5,000,000, and the same may be increased by the board of trustees whenever they may deem that the business of the company requires it. The capital stock of the company shall consist of 50,000 shares of $100 each.

Article seventh. The time of the existence of said company shall be fifty years.

Article eighth. The principal place of business of the said company is hereby located at the city of Sacramento, in the State of California, but the board of trustees may at any time, when they deem proper, change the principal place of business of the said company to the city of San Francisco, in the State of California.

We the undersigned, the stockholders of the said Contract and Finance Company, hereby certify the foregoing eight articles are the articles of association of the said company.

In testimony whereof we have hereunto signed our names this 28th day of October, 1867.

W. E. BROWN.
B. R. CROCKER.
THEO. J. MILLIKEN.

STATE OF CALIFORNIA,
County of Sacramento, ss:

I, E. D. Shirtland, county clerk in and for said county, do hereby certify the within and foregoing to be a full, true, and correct copy of the articles of association of the Contract and Finance Company, and the same are of record and on file in my office, and that said articles now filed in my said office on this 28th day of October, A. D. 1867.

Witness my hand and the seal of the county court of said county this 28th day of October, 1867.

[SEAL.] E. D. SHIRTLAND, *County Clerk.*

Filed in secretary of state's office by John H. Parnell, deputy clerk, October 28, 1867.

Bills creating commissions of inquiry will do no good.

Having concealed or destroyed the books of this directors' contracting company, the arrogant Central Pacific Railroad managers snap their fingers at former legislative attempts to secure a reduction of their extortionate tolls. Nothing but a direct law, like as bills 99, 1803, will bring them to judgment.

The Western Development Company was organized December 15, 1874, by Frank S. Douty, John Miller, Edward C. Wright, Frank C. Ross, and Henry K. White, clerks in the office of the Central Pacific Railroad Company.

It was the successor of the Contract and Finance Company, and had a nominal capital of $5,000,000, divided into 50,000 shares.

Its object was to carry on construction, manufacturing, mining, mercantile, mechanical, banking, and commercial business in all branches.

Succeeding the Western Development Company came the Pacific Improvement Company, organized November 2, 1878. Capital, $5,000,000, with 50,000 shares.

	Shares.

Were the incorporators, all of them being connected with the Central Pacific, and all except the last in the company's office.

APPENDIX D.

A GRACIOUS ADMISSION—SURPLUS REDUCED BY BUILDING SIDE LINES, ETC.

Mr. A. N. Towne, superintendent of the Central Pacific, graciously admits the right of Congress to legislate on this subject, in his letter to the board of railroad commissioners for California, wherein he says:

> Congress has reserved to itself full and complete jurisdiction over the regulation of freights and fares upon both the roads in question (the Central Pacific and the Union Pacific) and has already in a measure exercised such jurisdiction.

See report of Commissioner Foote in report of board to governor of California, at page 102.

As to this subject and what may be fair charges, see Harris *vs.* Parkwood, 3 Taunton, 264; Oppenheimer *vs.* Russell, 2 Res. and Pul., 42; Ashmore *vs.* Wainright, 2 Queen's Bench, 837; Fitchburg Railroad *vs.* Gage, 12 Gray, 395; McDuffen *vs.* Railroad, 52 New Hampshire, 430; Johnson *vs.* Railroad Company, 16 Florida, 623; Holford *vs.* Adams, 2 Duer, 471; Streeter *vs.* Railroad Company, 45 Wisconsin, 383; the Granger cases, 96 United States, 155, 164, 179, 180, 181; Shield *vs.* Ohio, 95 United States, 319.

And as to the elements of fair charges, see Pickford *vs.* Greno Junction & Co., 10 Mees & W., 399.

Thus the Union Ferry Company, owning several ferries between New York city and Brooklyn, is limited by the laws of the State of New York by being required to pay all amounts of income over the annual charges and limited percentage of dividends to certain public charities.

Notwithstanding the low rates of fare, the income of this company is far in excess of the expenses and the amount requisite to pay the dividend limited by law. But in order to use up a large amount of this surplus income the ferry company spends annually large sums in expensive boats, slips, ferry-houses, &c., since they fear a reduction of rates.

Following the example of this Union Ferry Company, the Central Pacific and Union Pacific Railroad Companies have used a large part of their assets and surplus earnings in buying or building lines of road not contemplated by the company at the start or by the act of Congress, thus using the assets and earnings of these roads in channels other than those contemplated by Congress. I claim that since the assets and earnings of these roads have been used in building other lines, thus materially reducing the surplus which should have been used for reducing indebtedness, the total income from all sources must be taken into consideration in determining the act under the act of 1862, and that, too, whether it came from the main line, branch lines, or leased lines.

Thus in Executive Document No. 83 of the first session of the Forty-eighth Congress you see that in 1882 some of these lines were run at a loss, while in 1883 there was a profit. (See pages 9 and 10.)

In 1882, then, there being a loss, the Union Pacific Company had to stand it, thus reducing the net income. Then why may not the profit for 1883 go to net income?

Had the Union Pacific used its funds and credit in getting rid of the debt and improving the condition of its main line, from Omaha to Ogden, of 1,042 miles, instead of consolidating with and leasing other lines of road built out of the funds and credit of the Union Pacific, Mr. Sydney Dillon could not have said that the company owned 1,820.9 miles of road and operated 2,872 miles more, making in all 4,693.3 miles (see annual report for 1882, pages 1 to 12), but the funds of the Union Pacific would have been proportionally increased or its funded debt diminished (see also list of roads).

Had the Central Pacific used its funds and credit honestly in defraying the cost of building and equipping its road from Sacramento to Ogden, 737 miles, Charles Crocker, vice-president of the Central Pacific, could not state in his report for 1882 that the company operated 1,217.87 miles of road owned and 2,830 leased, making, with the Southern Pacific and other roads named in the list given, about 6,000 miles practically owned by the Central Pacific; but the funds of the Central Pacific could have been proportionately increased and its debt diminished. (See Central Pacific Railroad report, 1882, page 23.)

Had such a course been pursued the net income from each of these roads would now be nearer 100 per cent. on the honest cost than 10 per cent.; but Huntington, Stanford, Crocker, and Hopkins, who, in 1860, were worth less than $120,000, would not now control 6,000 miles of railroad and have over $120,000,000 besides.

APPENDIX E.

THE OCTOPUS.

The following will show list of roads owned by the Central Pacific or the Union Pacific, or in which a portion of the directors are the same.

And first as to the Union Pacific:

THE UNION PACIFIC SYSTEM.

1. Union Pacific, } Consolidation of Union Pacific.
2. Kansas Pacific, } Consolidation of Union Pacific.
3. Denver Pacific, } Consolidation of Union Pacific.
4. Julesburg Branch.

APPENDIX F.

THE EXTRAVAGANT ESTIMATE EXPOSED.

In the report made to the stockholders of the Central Pacific Railroad Company for the year 1882 it is shown or alleged that the cost of construction alone of the 1,217.87 miles of road in use was $137,963,157.88. To illustrate the extravagance of this estimate, I will compare this item of cost with the same class of expenditures with the New York Central and Hudson River Railroad up to September 30, 1881. The Central Pacific Railroad Company did not have to pay land damages, but rather the reverse. And it should also be noted that, with the exception of crossing the Sierra Nevada Mountains, the Central Pacific had no grading or masonry work of any account, while the New York Central from Albany west had a great deal of both, and a still larger proportion on the Hudson River line.

The cost of construction of the New York Central and Hudson River Railroad to September 30, 1881, is recorded as follows: Grading and masonry, $19,863,581.56; bridges, $2,620,150.23; superstructure and rails, $30,438,458.92; engineering and agencies, $3,004,981.17; total construction 1,995.43 miles of single track, main line $55,927,171.88; Rochester and Lake Ontario Railroad, $150,000; Buffalo and Niagara Falls Railroad, $658,921.56; Saratoga and Hudson River Railroad, $2,000,000; Syracuse Junction Railroad, $732,295.57; Junction Buffalo Railroad, $219,900. Total construction of 339.11 miles, branches $4,159,119.13; total cost of 2,334.50 miles single track, $60,986,291.01.

Now, it will be seen from these figures that the charge of the Central Pacific to construction account in 1,217 miles of single-track road through a country which for the most part is nearly on a dead level, is over 225 per cent. more than the New York Central charged to construction account of double the number of miles of single-track road. Reducing the roads to the same number of miles of single track, and taking the construction account of the New York Central as a basis, and you find that the Central Pacific Railroad Company have charged nearly five times as much for construction per mile of road as is charged by the New York Central. And this, notwithstanding the fact that the Hudson River portion of the road from New York to Albany of one hundred and forty-four miles (which reduced to single track would be 375.53 miles) is built nearly the whole distance either through solid rock, requiring expensive blasts, or on trestles projecting out on the Hudson River, while the line from Albany to Buffalo and branches runs through mountains and valleys, crossing many streams, requiring heavy grades, much blasting, long cuts and embankments, and numerous buildings. The Central Pacific had none of these obstacles to meet, except in one portion of one hundred and fifty miles over the mountains.

If, then, with all the obstacles which the New York Central had to contend with that company can construct its road for $25,733 per mile, why can not the Central Pacific do at least as well, it having none or few of these obstacles to overcome?

The New York Central's first lines were built when it cost much more for railroad construction than at the time the Central Pacific was built, without making any calculation as to the extraordinary relative reduction in cost owing to the employment of Chinese laborers.

APPENDIX G.

RIGHT CONCEDED.

I submit, that the claim that Congress has a right to pass such bills as I have introduced, cutting down fares on the Union and Central Pacific Railroads, has been virtually conceded by these very companies when applying themselves for legislation favorable to their interests. I refer in proof of this to the following acts, altering or amending the original bills:

Act of July 12, 1862 (12 U. S. Stat., page 538).
Act of March 3, 1863 (12 U. S. Stat., page 807).
Act of July 2, 1864 (13 U. S. Stat., page 356).
Act of March 3, 1865 (13 U. S. Stat., page 504).
Act of July 3, 1866 (14 U. S. Stat., page 79).
Act of February 24, 1871 (16 U. S. Stat., page 430).
Act of May 6, 1870 (16 U. S. Stat., page 121).
Joint resolution March 3, 1865 (13 U. S. Stat., page 573).
Joint resolution May 7, 1866 (14 U. S. Stat., page 355).
Joint resolution May 21, 1866 (14 U. S. Stat., page 356).
Joint resolution July 26, 1866 (14 U. S. Stat., page 367).
Joint resolution December 20, 1867 (15 U. S. Stat., page 245).

Congress has also passed acts affixing penalties under the original act, as follows:

Act of June 12, 1866 (14 U. S. Stat., page 60).
Act of June 15, 1866 (14 U. S. Stat., page 66).
Act of June 25, 1868 (15 U. S. Stat., page 79).
Act of June 20, 1874 (18 U. S. Stat., page 111).
Act of June 22, 1874 (18 U. S. Stat., page 200).
Act of June 19, 1878 (20 U. S. Stat., page 169).

Congress has also passed the following appropriation bills, which should be cited in this connection and for the same purpose already indicated:

Act of April 30, 1878 (20 U. S. Stat., page 44).
Act of March 3, 1873 (17 U. S. Stat., page 508).
Act of March 3, 1871 (16 U. S. Stat., page 525).
Act of March 3, 1875 (18 U. S. Stat., page 453).
Act of June 16, 1874 (18 U. S. Stat., page 74).
Act of March 3, 1870 (20 U. S. Stat., page 420).
Act of March 1, 1881 (21 U. S. Stat., page 375).
Act of June 20, 1882 (22 U. S. Stat., page 120).
Act of August 2, 1882 (22 U. S. Stat., page 185).
Act of August 15, 1882 (22 U. S. Stat., page 250).

With respect to the Southern Pacific Railroad, see also:

Act of Congress of July 25, 1868.
Act of Congress of March 3, 1871.
Resolution of June 28, 1870.

APPENDIX H.

AN UNDENIED PREAMBLE SHOWING EXTORTION.

Preamble to joint resolution of the Legislature of the State of Nevada.

Joint resolution to the Congress of the United States in relation to discrimination in fares and freights.

Whereas the people of the State of Nevada have long suffered and do now suffer under the impositions and exactions of the Central Pacific Railroad Company, which, besides retarding enterprise, injures the business and prosperity of the people of this State, and amounts to the most enormous, unjust, and oppressive tax ever laid upon the industry of a people. The said railroad company exercises over the persons and property of others an almost absolute power, vicious and tyrannical, destructive of the rights of persons and of property, and opposed to common justice, as well as to every principle of civil and constitutional liberty known since the days of Magna Charta; and

Whereas it is proper that the truth should be known concerning this corporation and its transactions, the following facts are herein stated: The people of Palisade, distant four hundred and thirty-five miles east from Sacramento, have to pay for freight on flour (fourth-class freight, per published special-rate tariff of Central Pacific Railroad) per car-load the sum of $282 from Sacramento, while the people of Toana, one hundred and twenty-nine miles farther east, pay freight on flour per car-load, according to the printed special rate, the sum of $275 per car-load, while the merchant having a contract for some so-called competitive point with this railroad company pays freight on the same article, to wit; flour, per car-load, only $200. The merchant at Toana having a special contract pays $82 per car-load less freight than the merchant at Palisade, although, as before mentioned, the carriage is one hundred and twenty-nine miles more.

The goods delivered at Palisade or Battle Mountain, distant respectively four hundred and thirty-five and three hundred and eighty-three miles from Sacramento, have a freight charge of $480 per car-load, while at Toana the freight amounts to $275 per car-load to persons having special contract rates for so-called competitive points, the greater service being performed for the less amount. Persons shipping wool or other products from Palisade, Battle Mountain, Elko, or other points in this State to the Eastern States have to pay local rates to Sacramento, thence freight at through rates back over the same road to the point of destination, the shipper being often compelled to pay freight at local rates for a distance of over five hundred miles, a service useless and unnecessary even if rendered.

The same unjust discrimination is practiced by this railroad company against the people of this State in the rates of freight upon goods shipped from points east of this State. The freight on a box of eggs from Ogden to Toana costs one man $3.35 per box, and the same number of eggs in the same sized box and of the same weight costs another man 65 cents; a hundred pounds of squashes costs one man in freight $1.36, while it costs another 55 cents. Hams and case goods cost one man $2.04, while they cost another but 55 cents. The distance from Ogden to Toana is one hundred and eighty-three miles.

The same unjust discrimination is also practiced by this railroad company in passenger fares. A ticket from Omaha to San Francisco costs $100, while a ticket from Omaha to Palisade, being six hundred miles nearer, costs $95. A person desiring to go East is charged within a fraction of the full fare through and from San Francisco to the point he desires to reach, although he may ride over one-third or less of the line of the Central Pacific Railroad. More appalling examples of injustice than are shown by the above instances, selected from among a myriad of kindred transgressions, are hard to conceive.

* * * * * * *

STATE OF NEVADA,
Secretary's Office, ss.:

I, Jasper Babcock, secretary of state of the State of Nevada, do hereby certify that the foregoing is a true, full, and correct copy of the original preamble which passed the Nevada Legislature February 10, 1881, on file in my office.

In witness whereof I have hereunto set my hand and affixed the great seal of State. Done at office in Carson City, Nevada, this 12th day of February, A. D. 1881.

[SEAL.] JASPER BABCOCK,
Secretary of State,
By J. J. CHESLEY, *Deputy.*

APPENDIX I.

THE RIGHT OF INQUIRY.

It is a fact that the directors of the Union and Central Pacific Railroad Companies made contracts for the building of these roads with contracting companies or firms of which they were also members and directors, and in which contracts they had a large beneficial interest inimical to the interests of the stockholders and bondholders or creditors, of which last class the United States was one, it having guaranteed certain bonds.

This being the case, the United States has a right, on the ground of being a creditor if on no other, to inquire into the nature and fairness of these construction contracts. And the best way to institute the inquiry is under such bills as I have introduced—

First. That the directors of these companies were and are the voluntary and express trustees of the stockholders.

English cases: Field on Corporations, sec. 172–174; Flanagan *vs.* Great Western Railway, 7 L. J. (Ex.); Parker *vs.* McKenna, 11 Moak's Notes, 456; Imperial Merchant Credit Association *vs.* Coleman, 6 Moak's Notes, 418; Aberdeen Railway *vs.* Blakie, 1 McQueen, 46.

Twin Lick Oil Co. *vs.* Marbury, 1 Otto, U. S. Sup. Ct., 588; Railroad Co. *vs.* Durant, 5 Otto, U. S. Sup. Ct., 576; Jackson *vs.* Ludding, 21 Wallace, 616; W. A. and F. R. R. Co. *vs.* A. and W. R. R. Co., 19 Grattan, 592; Wright *vs.* Oroville Manufacturing Co., 40 California, 27, 28; Wilbur *vs.* Lynde, 49 California, 392; City of San Diego *vs.* R. R. Co., 44 California, 112, 113, 116; E. and N. A. R. R. Co. *vs.* Poor, 59 Maine, 278; Bart *vs.* Bridgeport Spring Co., 42 Conn., 26; Hoffman Coal Co. *vs.* Cumberland Co., 16 Maryland, 456; Cumberland Coal Co. *vs.* Parish, 42 Maryland, 601; Simmons *vs.* Vulcan Oil Co., 61 Pa. St., 209; McElhinney's Appeal, 61 Pa. St., 193; Hazard *vs.* Durant, 11 R. I., 199; Heath *vs.* Erie R. R., 8 Blatchf., 347; Heath *vs.* Erie R. R., 12 Blatchf., 293; Board & Co. *vs.* S. M. and B. R. R. Co., 50 Ind., 97; G. C. and S. R. R. Co. *vs.* Kelly, 77 Ill., 426; Stuart *vs.* Lehigh Valley R. R. Co., 38 N. J. Law, 521; Cumberland Coal Co. *vs.* Sherman, 30 Barb., 553; Abbott *vs.* American Hard Rubber Co., 33 Barb., 578; Star Ins. Co. *vs.* Palmer, 41 N. Y. Sup. Ct., 267.

The above apply with equal force as to the relations between officers of these companies and the creditors.

Second. The contracts for the building of these roads being made by the directors with themselves and for their individual benefit, are fraudulent and contrary to public policy, and therefore unlawful and void.

Many of the above cases will be found in Zim's Leading Cases on Trusts. Some of the above will be found at pages 1, 43, 77, 87, 125, 177, 181, 373.

APPENDIX J.

HUNTINGTON & CO.'S "ANTI-MONOPOLY" RECORD.

C. P. Huntington and his compeers have "gobbled" the following railroad companies:

	Miles.
10 companies in Central Pacific	1,404.00
6 companies in Southern Pacific	956.00
1 company in Southern Pacific of Arizona	385.00
1 company in Southern Pacific of New Mexico	170.00
1 company in Galveston, Harrisburg and San Antonio	855.00
1 company in Monterey	15.12
1 company in Santa Cruz	21.50
1 company in Sacramento and Placerville	48.50
1 company in Los Angeles and Independence	16.83
1 company in Los Angeles and San Diego	27.60
1 company in Northern Railway	124.80
1 company in California Pacific	115.44
1 company in Stockton and Copperopolis	49.00
1 company in San Pablo and Tulare	46.34
1 company in Amador Branch	27.20
1 company in Berkeley Branch	4.00
1 company in Chesapeake and Ohio	661.00
1 company in Chesapeake and Ohio and Southwest	398.00
1 company in Kentucky Central	184.00
1 company in Elizabethtown, Lexington and Big Sandy	130.60
1 company in Morgan's Louisiana and Texas	206.00
1 company in New Orleans and Texas	450.00
1 company in Texas and New Orleans	116.00
1 company in Louisiana Western Extension (Texas)	7.00
1 company in Louisiana Western Extension (Louisiana)	105.00
1 company in Louisiana Central	52.00
40 Total, absolutely controlled	6,566.04
1 Saint Louis	724.75
2 Atlantic and Pacific	537.70
—	1,262.45
43 companies	7,828.49
Railroad companies (as above)	43

Street railroad companies:

California Street Railroad, Market Street Railroad, Fifth Street Railroad, Potrero and Bay View Railroad, San Francisco 4

Steamship companies:

1. Pacific Mail, New York to San Francisco, Australia, and Japan.
2. Occidental and Oriental, San Francisco to Japan.
3. Morgan Line, Texas to New York.
4. Colorado Steam Navigation Company.
5. California Steam Navigation Company.

Bridges:

1. Colorado River bridge.
1. Rio Grande River bridge.

APPENDIX K.

Special through-freight tariffs to San Francisco, Sacramento, Marysville, San José, Stockton, and Oakland, Cal.

From—	Rate per hundred pounds.							
	First class.	Second class.	Third class.	Fourth class.	Class A.	Class B.	Class C.	Class D.
New York	$6 00	$5 00	$4 00	$3 00	$2 50	$2 00	$1 75	$1 50
Cincinnati and Indianapolis	5 31	4 25	3 19	2 65	2 39	2 12	1 86	1 59
Chicago and Saint Louis	5 00	4 00	3 00	2 50	2 25	2 00	1 75	1 50
Omaha	4 50	3 75	2 75	2 25	2 00	1 85	1 70	1 50

CLASSIFICATION—NOTE IMPORTANT CHANGES.

[NOTE.—"D 1" indicates double first-class rates; "1½" one and one-half times first-class rates, and "3 to 1" three times first-class.]

A.

Acids	2
Advertising, almanacs, circulars, pamphlets, and posters	4
Agricultural implements (owner's risk), in less than car-loads, as follows:	
Reapers, mowers, harvesting-machines, thrashers, plows, feed-cutters, and harrows	1
Agricultural implements—Continued.	
Metal appurtenances of agricultural implements, iron-work, and castings, of reapers and mowers, when K. D., in small quantities, apply machinery rates.	
Seed-drills, corn-planters, cultivators, shovel-plows, fanning-mills, horse-rakes, and similar light bulky machines	1½
Do., knocked down	1
Plows and harrows, knocked down and boxed	4
Agricultural implements, named above, in car-loads of 20,000 pounds	A
Albums	2

Alcohol, in cans, boxed	A
Alcohol, whisky, high wines, and pure spirits, in wood, owner's risk of leakage	B
Alcohol, whisky, high wines, and pure spirits, in wood, shipped under valuation, $1 per gallon	C
Ale and beer, in glass or stone, packed	4
Ale and beer, in wood, owner's risk of leakage	A
Ale and beer, bottled or in wood, owner's risk of leakage, in car-loads of 20,000 pounds	B
Alum, in barrels	D
Ammunition, fixed	1
Anchors	D
Anchovies	4
Andirons	4
Antimony	4
Anvils and anvil-dies	D
Apples, dried	4
Apple-parers	4
Argols	4
Artificial flowers and feathers	D 1
Asbestus	D
Augers, post-hole, boxed	4
Axes, without handles, in boxes	C
Axes, on handles	4
Axle-grease	B
Axles, carriage and wagon	C
Axles, car	D
Axle-clips	4

B.

Backing	C
Bacon, in boxes, barrels, or casks	4
Bacon, in sacks	3
Bacon, hams, and all cured and salted meats when not in regular packages, same as bulk meats.	
Bags, paper	C
Bags and bagging, cotton, compressed, in bales, released	2
Bags and bagging, burlap, compressed, in bales, released	4
Bags and bagging, gunny, compressed, in bales, released	B
Baking-powders	A
Bark, extracts	4
Barley, pearl	4
Barometers	1
Barrels, empty	1
Barrels, knocked down or set up, in car-loads of 20,000 pounds	D
Barytes	D
Base balls and bats	3
Baskets, willow	D 1
Baskets, splints, nested	1
Bath boilers, iron, rubber-coated, as machinery, boxed	2
Bath-bricks	C
Bath-tubs	1
Bath-rims	1
Bats	1
Bats, compressed	2
Beans	4
Bed-plate of an engine, as machinery.	
Beef and pork (mess), in barrels	4
Beef-tongues, as ham and bacon.	
Bee-hives, prepaid	2
Beer (see ale).	
Beeswax	4
Bedsteads and bunks, iron	1
Bed-slats, wooden, in bundles or packages	C
Bells, less than 100 pounds each	4
Bells, 100 pounds or over, each	3
Bellows, blacksmith	2
Belting, rubber	4
Belting, owner's risk, released from chafing	A
Belting, leather	3
Belting, leather, released	4
Benzine	A
Benzine, owner's risk of leakage and fire	C
Bird-cages, boxed	D 1
Billiard-tables, boxed, owner's risk	2
Billiard-tables, complete, including slate or marble, car-loads of 20,000 pounds	3
Billiard-tables, wood work of separate, without slate and marble	1½
Binder's boards	D
Bitters, in glass, owner's risk	4
Bitters, in glass, owner's risk, in car-loads of 20,000 pounds	C
Bitters, in wood, same as liquors.	
Blacking, in boxes and barrels	C
Blacking, liquid	C
Black lead, barrels and boxes	C
Blackboards, in racks and boxes	4
Bladders and sausage skins	1
Blankets in bales, released	2
Bleaching-salts	C
Blinds	1
Blowers	2
Blue vitriol, or bluestone	D
Blueing, liquid	4
Bobbins, wound	1
Bobbins, spools	A
Boats, not over twenty-six feet long	D 1
Boats, in sections	1
Boiler felting	3
Boiler flues, copper or brass	4
Boiler flues, iron	D
Boilers, not more than twenty-six feet long	1
Books	1
Books, blank	3
Boots and shoes, leather, strapped	1
Boots and shoes, leather, not strapped, $1 above first-class	
Bottles, empty, in crates or boxes, owner's risk	D
Bottles, druggists', fancy and nursing	A
Box stuff, in packages	C
Brackets, bronze, brass or fine metal	2
Brackets, wood or iron	4
Brandy-peaches	5
Brass kettles	2
Brass, castings, sheet, wire, nails, and tacks	4
Brimstone	D
Bristles	D 1
Bristol board	A
Britannia-ware	1
Bronzing powder	1
Brooms	1
Broom-corn, compressed	3
Brushes	2
Buckets, nested	2
Buck-saws and frames	4
Buckwheat	4
Buffalo robes	1
Buggies, taken apart and all parts boxed in tight cases, completely inclosing them	1½
Buggies, taken apart and inclosed in open boxes, crates, or skeleton frames	D 1
Buggy bodies, in the white, in crates	D 1
Buggy reaches, in the white	4
Bulbs and roots (must be prepaid)	1
Bulk meats	1
Bulk meats, car-loads of 20,000	3
Bungs, wood or iron	B
Burial cases, metallic	3
Burial cases, wooden	2
Burr blocks and millstones	4
Butter	2
Butter tubs	4
Butts, hickory	C
Butts, hinges, hooks, and staples, (if specified on receipt as such)	B
Buttons, pins, needles, hooks and eyes, buckles, and corset clasps	1

C.

Candles	D
Canned fruits and vegetables	D
Canned fish and meats	D
Canvas, in cases	1
Canvas, in bales	1
Canvas, in bales, owner's risk of chafing, released	2
Caps, percussion	1
Capstans	C
Cards, playing	4
Cardboard	A

Leather belt-lacing	2
Leeches	4
Lemons and oranges, owner's risk, prepaid	2
Lemon peel	4
Lentiles	4
Licorice	4
Linen sets and collars, as dry goods.	
Life rafts	D 1
Lignum vitæ	A
Lime water, in wood	4
Liquors, in glass, owner's risk of leakage	4
Liquors, in wood, owner's risk of leakage	A
Liquors, $1 per gallon valuation	C
Lithographic stones	2
Live plants and trees, boxed, prepaid	1
Live-stock, at estimated weights, as follows	1
Horses, mules, and horned animals, not valued at over $100 each—one, 2,000 pounds; two, 3,500 pounds; three, 5,000 pounds. Each additional animal, 1,000 pounds. Stallions, 4,000 pounds each.	
The same when valued at more than $100 each, add to the rate 5 per cent. of the increased valuation.	
Hogs, sheep, lambs, and calves, actual weight, but not less than three hundred pounds each.	
Live stock (except blooded horses) shipped by special contract, in car-loads of not less than 20,000 pounds	3
At the above rate the owner is to enter into a contract agreeing to feed, water, and take care of the stock at his own expense, and assuming all risk of injury or damage that the animals may do to themselves or each other.	
In consideration of the above agreement, one man, in charge of the stock, will be passed free with a shipment of two or three car-loads; two men with four, five, or six car-loads; over six car-loads, three men.	
No pass will be given with the shipment of one car-load, and no return passes will be given in any case.	
Whenever the owner or man in charge requests or requires the use of a whole car for his animals, he will be charged the full car-load rate, though he has but one animal.	
For blooded horses in car-loads, valued at over $2,000 to the car-load, add 5 per cent. of the increased valuation to the car-load rate.	
Contracting agents are notified that the Pacific roads will not accept fictitious valuations, but the actual cash value of the animals must be stated.	
Locks, exclusively of iron	B
Locks, iron, with brass bolts and keys	4
Locks, pad and prison	4
Locomotives and tenders, narrow gauge, on cars, taken only by special contract.	
Locomotive tires	C
Looking-glasses, not over 6 feet long, released	1
Looking-glasses, over 6 feet long, released	D 1
Logwood	C
Lumber, hard and soft, less than car-load, not exceeding 16 feet in length	A
Lumber, car-loads of 20,000 pounds	C

M.

Macaroni and vermicelli	4
Machinery, coarse, not boxed, not otherwise specified	2

Spices	3
Spirits turpentine, in barrels or casks, owner's risk of leakage	C
Sponges	1½
Sponges, compressed in bales	1
Spring-bars, in the white	4
Springs, rubber, as car-springs.	
Springs, steel	B
Springs, wire, in boxes or casks	4
Squares	4
Stamped ware (articles each made from a single piece of metal without solder)	B
Stair-rods	2
Stamps, for stamping impression, for office use	2
Starch	D
Stationery	1
Statuary, owner's risk, valued at not over $200 per package	1
Statuary, valued at over $200 per package, not taken.	
Staves, headings, and shooks	4
Staves, headings, and shooks, car-loads of 20,000 pounds	D
Steam gauges and indicators	2
Steam-drums, as machinery.	
Steel, cases and bundles	B
Steel wedges	4
Steel shanks, for boots and shoes	4
Stirrups	4
Stoneware. (See earthenware.)	
Stoves, ranges, registers, radiators, and reservoirs, released	4
Stoves, ranges, registers, radiators, reservoirs, stove furniture, and hollow-ware, in car-loads of 20,000 pounds, owner's risk of breakage	B
Stove pipe and elbows, in crates or boxes	1
Stove-castings, bundles, released	4
Stove-castings, in boxes	B
Stove-polish	C
Straw-boards	D
Straw, sawdust, and tan-bark, used to protect property in box-cars	D
Sugar	C
Sugar-cane	1
Sugar, maple and lemon	3
Sugar, grape	A
Sulphur, flour of	4
Sulphur, roll	D
Sumac	A
Swords	1
Sirup, released, owner's risk of leakage	C
Sirup, maple, owner's risk of leakage	3
Sirups and coloring, in wood, not molasses	3

T.

Tacks	A
Tallow	B
Tar, owner's risk	D
Tassels, cord, &c.	1
Tea	1
Teazles	1
Telegraph instruments	1
Telegraph insulators	4
Telegraph-battery material	4
Telegraph cable	4
Thread	1
Thread cabinets	1
Tiling, marble or slate	D
Tiling, earthen, fancy	4
Tin-foil	4
Tin pans and covers, nested	A
Tin-plate	D
Tin plates, nested	B
Tin, pig or bar	C
Tin tubes and pipes	1
Tinned spoons	4
Tin-waiters, boxed	A
Tinware, boxed	1
Tinners' trimmings	4
Tire-benders	4
Tobacco, manufactured	2
Tobacco, manufactured, released	3
Tobacco, leaf, domestic	3
Tobacco, leaf, domestic, released	B
Tobacco, leaf, foreign	3
Tool-chests, mechanics'	2
Tools, edge	4
Toothpicks	4
Tow	4
Towel-racks	4
Toys, boxed	1
Traps, animal	4
Trucks	3
Trunks, empty or filled, released	D 1
Trunks, when completely boxed, rate on actual contents.	
Truss hoops, not too large to be loaded in box-car	3
Tubs, nested	2
Turbine-wheels	A
Twine, in cases or barrels	3
Twine, in bales	2
Twine, in bales, owner's risk chafing, released	3
Twine, fish-net, linen	1
Type or type-plate, in boxes	4
Type-writers, as fine machinery.	

U.

Umbrellas, boxed	1
Underwear, as dry goods.	

V.

Varnish, owner's risk of leakage	B
Vases, China, bronze or Bohemian glass, as chinaware.	
Vault lights	D
Vegetine	4
Vehicles of all kinds, not boxed, set up, owner's risk of chafing, fire, weather, and breakage, at estimated weights, as follows:	
Stage-coaches, omnibuses, hearses, carriages, hacks, and extra large wagons or sleighs, 5,000 pounds each	1
An ordinary two-horse express wagon, buggy, or sleigh, 3,000 pounds each.	
A one-horse buggy, chaise, cab, cart, wagon, or sleigh, with top, 2,500 pounds each.	
Same, without top, 2,000 pounds.	
A gig or sulky, 1,500 pounds.	
An ordinary one or two horse wagon or buggy, without top, cart or sleigh, taken apart, so as to be loaded in a box-car, 1,500 pounds each.	
A two-horse peddler's wagon, 3,000 pounds.	
A one-horse peddler's wagon, 2,500 pounds.	
Fire-engines, hand, each, 4,000 pounds.	
Fire-engines, steam, each, 8,000 pounds.	
Hose-carts, each, 1,500 pounds.	
Street-cars, one-horse, 6,000 pounds.	
Street-cars, two-horse, 8,000 pounds.	
Fire-engines and fixtures, hook-and-ladder trucks, in car-loads of 20,000 pounds	3
Velocipedes, knocked down, boxed	1
Verdigris	4
Veneering, boxed	4
Vinegar	C
Violins and cases, boxed	1½
Vises	A

W.

Wadding	1
Wagons, children's, set up	D 1
Wagons, children's, knocked down and boxed	3
Wagons, common, in pieces	1
Wagon fellies, spokes, and hubs	B
Wagon rims and bows, bent	4
Wagon rims and bows, bent, released	B
Wagon whiffletrees	B
Wagon single and double trees	B
Wagon and carriage wheels, poles, and shafts	1
Wagon poles and shafts, rough	4
Wagons—ordinary farm wagons—without springs, car-loads of 20,000 pounds	A
Smaller lots, taken apart, wheels and poles taken off, actual weight	1
Spring wagons, car-loads of 20,000 pounds, not released	3
Car-loads, of 20,000 pounds, released, at owner's risk of chafing	4
Smaller lots. (See Vehicles.)	
Mixed car-loads of ordinary farm wagons and spring wagons will take the rate provided for spring wagons in car-loads.	
Wagons, Concord, knocked down and boxed, same as carriages knocked down and boxed.	
Wagons, Concord, set up, same as stage-coaches.	
Wagons, express, knocked down, so as to be loaded in a box-car, shall be classed same as buggies and carriages knocked down and boxed.	
Wagons, in car-loads; shippers frequently load with these wagons kegs of nails. In all such cases charge car-load rate on 20,000 pounds of wagons and tariff rate on actual weight of the nails.	
Wagon castings, not otherwise specified	4
Wagon skeins	B
Warp	2
Washboards, boxed	4
Washing-machines, boxed	2
Watch crystals	D 1
Water-closet sinks, iron	4
Water-closet sinks, crockery	3
Wax	4
Weather-strips, boxed	4
Webbing	1
Whalebone, manufactured	1
Wheelbarrows, knocked down	A
Wheelbarrows, set up	3
Whips, boxed	1
Whiting	C
Wicking	1
Willow-ware	D 1
Wind-mills	1
Wind-mills, car-loads of 20,000 pounds	4
Windlasses, as machinery.	
Windlasses, ship, same as capstan.	
Window-shades	1
Wine, in boxes and baskets	4
Wire, coppered	B
Wire, copper or brass	4
Wire cork-fasteners	4
Wire, bonnet	1
Wire cloth and netting, boxed	4
Wire goods	1
Wire, fence	B
Wire, barbed fence	4
Wire fencing	4
Wooden-ware, boxed	4
Wooden ironing-boards	4
Wood skewers	4
Wood pipe	4
Wool, compressed	2
Woolen goods, in cases	1
Woolen goods, in bales	1½
Woolen goods in bales, owner's risk of chafing, released	1
Wrenches	4

Y.

Yarn, in cases	1
Yeast-powders	A
Yeast-cakes	A
Yellow metal	D

Z.

Zinc, sheet, in casks or boxes	B
Zinc paints	C
Zinc plates, stamped and japanned	4
Zinc, slab	B

American Merchant Marine.

SPEECH

OF

HON. P. B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Tuesday, May 6, 1884,

On the bill (S. 1448) to remove certain burdens on the American merchant marine, encourage the American foreign-carrying trade, and for other purposes.

Mr. PLUMB said:

Mr. PRESIDENT: I do not know that I ought to detain the Senate for even a moment, as the prospect now is that a vote can be had upon the pending measure before adjournment. But there are considerations of a general character which have not been touched upon in the debate that are determinate of the vote I shall give and which I will venture to present.

It is proposed by this bill to remove some burdens from ship-owners; and the Senator from Missouri [Mr. VEST] proposes an amendment permitting all who choose to buy ships in whatever place and of whatever manufacture, and that the ships so purchased shall be entitled to American register and in all respects be entitled to the privileges to which ships of American manufacture are now entitled.

So far as the subject is involved in the discussion of the question of burdens imposed by law upon ship-owners which this bill proposes to remove, and other matters of like character, nothing could be added to the intelligent and eloquent speech made by the Senator from Maine [Mr. FRYE]. Convincing as they were, however, and conclusive as to the necessity for the passage for the bill, they do not meet a view of the case which presents itself to my mind as still more conclusive.

The evil to be remedied is the decadence of our merchant marine, and the question arises how to do it? Naturally and inevitably the cause of the decadence takes first place in all the discussion, and it is sought by speculation upon such cause to find the remedy. In the enumeration of such causes, burdensome legislation, rebel cruisers, and a protective tariff are mentioned, sometimes one and sometimes all, with varying degrees of attached importance and force.

To my mind the principal cause is apart from all these, although related to one. The decline of the American merchant marine is the logical outgrowth or result of circumstances which were practically beyond control. While this decline is to be regretted, it is not so serious a misfortune as is generally believed, and it even has its compensations. The question is primarily one of profit. In a secondary way, or whichever manner it may be put, one question is that of profit and the other that of national defense. As we have not been driven to consider the question of national defense with regard to any present necessity, and have therefore been free to follow those things which are most profitable, I shall endeavor to show why, with nearly everything desirable, we have no ships.

Practically, the decline of American shipping was contemporaneous with the breaking out of the war of the rebellion. It happened also that at that time iron was beginning to supplant wood as the material for the construction of ocean ships—a process which continued until wood entirely disappeared. This change gave to the ship-builders of Great Britain an obvious advantage, but it is inconceivable that American enterprise, skill, and capital, aided by legislation, which could then have been readily had if needed, would not have been equal to the emergency if nothing cut of the usual course had occurred.

But something unusual and of wholly unexpected character did occur. The rebellion was precipitated. Both sides were practically unprepared. There were neither army, navy, forts, arsenals, nor military supplies. All had to be provided, and by a people unused to war, and under circumstances which taxed most severely the resources and patriotism of the entire people. Neither side wanted sailors so much as soldiers, nor ships so much as cannon, small-arms, and means of internal transportation.

The land and the internal waters of the country were the chief theater of the war. Each side placed in the ranks every available man and the energies, the aptitude, the ingenuity of all the remainder and all the resources of both sections were profusely put forth to maintain the armies in the field. Such armies had never been seen and none were ever so lavishly supplied. Literally every resource of the country for and against the Union was brought into requisition. It was a struggle which thoroughly enlisted the sympathies, the pride, the determination of both sections, and nothing was omitted which could strengthen friend or weaken foe.

Armies were decimated only to be re-enforced by new levies; supplies captured, destroyed, or consumed, were replaced from granary and factory. Added to the grand total of the immense consumption of all the material of a great war was the enormous destruction of property, not alone nor chiefly that of army and military supplies, but of railroads, bridges, houses, fences, towns, cities, and everything necessarily made the subject of destruction by armies; marching, countermarching, foraging, destroying, fighting, wantonness, necessity for reprisals, and by accident or design, until the value of property thus destroyed was supposed to fully equal the amount of the war expenditures proper. This continued for four years, during which period all the burdens which could be borne were imposed by taxation, and these being wholly inadequate to meet pressing necessities were supplemented by borrowing, and the Union debt alone at the close of the war was more than $3,000,000,000.

The Government paid high interest for the use of money and large premiums to those who negotiated for it; there were great profits in contracts for military supplies, which, coupled with the necessities of the situation, the inevitable tendency of all effort and investment toward the things of the war, the danger to investments on the sea by reason of confederate cruisers, the strained condition of our relations with foreign powers at times, the displacement of wooden vessels by those built of iron—all these things operated to the almost total obliteration of our maritime commerce; and the American merchant marine, which for years previously was second only to that of Great Britain, had shrunk to nothing. The ships were gone, the capital was invested elsewhere, and the aptitudes for business on the sea had been forgotten.

But why, when the war was over, the soldiers discharged, and skill and capital and enterprise had gone back to the pursuits of peace, did not the American people reclaim their old position on the ocean? The answer is obvious enough to those who will look.

There were no ships to begin with. Everything needed to be built up from the bottom. There were no adequate facilities for building iron ships, the only kind then in use. The capital of the seaboard States was largely invested in Government bonds, paying high interest and escaping taxation. Ventures on the sea had assumed new form, the competition was greater than ever before, and capital would have been slow even under ordinary circumstances to go back to its old paths. But these circumstanc were far from ordinary. The financial situation was one of disturbance; rates of interest were high. The enormous destruction of property during the war called for investment to replace it. The resources of the South were wholly exhausted and she leaned upon the North for means with which to resume business. But a more potential factor remains to be mentioned.

During the war the Government undertook the construction of the Pacific railroads. The exposed condition of the Pacific coast during the war, the wide separation of its communities from the rest of the country, the interruption to ordinary communication by means of hostile savages made their building a matter of national interest and of national defense. This was the beginning of a tendency to make investments in the West of a character and magnitude before unknown. These railroads penetrated new and almost unknown regions, developing fertile lands, mines, and great cattle ranges.

When the war closed nearly 3,000,000 men who were serving in the armies on both sides were discharged and returned to civil life. They were usually men in the prime of life, the pick of the land, physically, mentally, and morally. Going back home after discharge they found their places on the farms, at the bar, in the shops, behind the counters, in the offices, everywhere, filled by new men. It was not pleasant nor convenient nor profitable to sit down and wait for new opportunities in old communities. But a more powerful feeling operated on most of them. They had been educated by their service in the army; had played a part in the greatest drama of modern times. They had literally held the fate of a nation in their grasp.

Going out from the plow, the shop, and from the highways and byways of life, as it was before the war, they became actors in a broad amphitheater, and their horizon had widened, and their independence, force of character, and self-reliance had increased. When discharged, they had in them that spirit of adventure, that restless ambition which provoked discontent with the quiet and even currents of life in old and staid communities, and specially fitted them for frontier work, subduing the virgin soil and building up new empires.

What more natural than that a large proportion of these impatient, strong, self-reliant men should go to the new West? And so they did, from both South and North. It was the greatest and most significant hegira ever known in modern times. Kansas and Nebraska had but a fringe of settlement upon their eastern border; Dakota was uninhabited; Colorado consisted of but a handful of miners in her northern gulches; New Mexico had no white population; Montana, Idaho, and Washington Territories were scarcely inhabited, and Texas was yet a wilderness. Between the close of the war in 1865 and the year 1880 the States and Territories west of the Mississippi doubled and quadrupled their population, and then quadrupled it over again.

These men carried with them the same invincible determination and courage which had characterized them in the Army. Wherever they went they planted townships, and counties, and States. They created a demand for the railroad, for improved agricultural machinery, for household implements, and for all the appliances of modern and high civilization.

Thus every energy that had been previously concentrated to put down the rebellion was turned in the direction of filling up these places and supplying these wants. Since 1861 the American people have built

70,000 miles of railroad, the best railroads on the whole in the world. They have equipped them, too, superior to anything known elsewhere. They have opened up all the agricultural lands of this country. They have established the most complete system of transportation, enabling everything we produce to be placed upon the seaboard or wherever else it may be needed, making the plenty of one section fill the lack of another, until to-day we only know the average amount of crop without feeling a shortage in any particular locality.

There never has been such progress in a material way in the history of the human kind. With it all there has been a great and phenomenal prosperity. The only thing anybody has found wherein we lacked was simply a merchant marine. We have acquired everything else that skill, that industry, that energy could possibly give to a people.

During this time we have been operating under what is called a high protective tariff. I say nothing now concerning the wisdom of that policy, because it is beyond the necessity of discussion at this juncture. But under the operation of that or in opposition to it, whichever it may be, we have seen every single article of manufacture steadily decrease in price; everything that enters into the construction of railroads, everything that enters into the construction of agricultural implements, every article of clothing, every article of necessity of any kind or description for the use of man steadily cheapened. We have built the railroads, opened the farms, and fenced them. We have provided the farmers with machinery whereby their lands can be cultivated in such a way that notwithstanding the greater necessities of the owner, notwithstanding the higher-priced labor which cultivates them, we have driven Russian wheat, produced by cheap labor, substantially out of the markets of the world. Fifteen years ago 22 per cent. of the wheat sold in Liverpool was American and 44 per cent. Russian wheat. The conditions are now exactly reversed. That is something to have gained. It was something we needed to do, and we needed its accomplishment a great deal more than to push ourselves out on the ocean for any purpose whatever.

The ship-builders of Boston, when our vessels were driven from the ocean or they were obliged to sell them during the war, engaged in railroad building. The Nickersons, the Peabodys, the Burrs, the Speers, and men of that class, who had millions of dollars invested previously in ships, took up new enterprises in the railroads of the West, and realized more than they could have made in shipping. The people of our Eastern coast, where ships were built before the war and whose owners counted their profits in foreign ventures, were glad to drop them, and find in this new tide of emigration westward an opportunity for investment and profit on land such as had never before been witnessed.

We had not even sufficient money for such vast enterprises, but were obliged to borrow it. I do not feel more affronted at the idea of having the goods I am interested in carried in a foreign bottom than carried on a railroad the stock of which is held abroad. We borrowed money to build railroads, and obtained it from all over the world. In doing so, we have laid a needed foundation for that conflict which involves the commerce of the world; and without this foundation we should have had little chance in the struggle.

This process has gone on from time to time and we have constructed these great lines of railroad. We have filled up all the interior spaces. The railroad building of the future is to be separate and distinct from anything known in the past. Independent lines of railroad are to be built no more. The railroads of the future are to be the cross-sections and transverse lines in the shape of branches. New capital will not have to be sought hereafter as heretofore for the purpose of building lines of railroad; but the present source of supply, the capital already enlisted in railroad building, will construct the railroads of the future. That much of the work is done, and now the people who have turned their faces westward are beginning to find the necessity of other outlets; and by a natural process, as natural as that of evolution, the American people are facing the other way. We are now on the threshold, in my judgment, of a development outward, of a contest for the foreign commerce of the world for which we have been preparing, and in which, if not interfered with in some untoward way by legislation, we shall achieve as great a triumph as in the development of the internal commerce of this country.

During this time steel rails have decreased in price from $160 to $35 per ton. We are now almost at the point of competition with England. We are on the very threshold of realizing the full fruition of all we have ever hoped or claimed as the result of the policy which would build up our own industries to the exclusion of those of other nations. There is no enterprise in the world beyond the ability of the American people to compass when once they address themselves to it. There is no problem their ingenuity can not solve; there is no obstacle their courage will not overcome; there is no controversy in which they will ever engage from which they will not emerge triumphant. They have not struggled for maritime supremacy during the last twenty years. They have been content with their work of internal improvement; they have been content to develop the soil, to build up new States, new communities, new sources of agricultural and other productions, preparatory for this other strife that must ensue and for which they must be ready before they undertake to engage in it.

Now that this has been accomplished, these same forces, augmented by our great population and other attendant acquisitions, are ready to embark upon the sea. By that resistless movement which has characterized our people in their struggle with the elements of nature they are about entering upon this struggle on the ocean for the commerce of the world. We have arrived at this point now, and must determine whether we shall employ in this contest for supremacy the agencies which we have heretofore used successfully, or whether we shall at this juncture, when ready to enter upon the triumph of a new career, abandon the policy heretofore adopted and surrender all we have gained during these long years.

With steel at $35 per ton and still cheapening why should we now yield to the cry for "free ships," which simply means British ships? Why should we now enter upon the deplorable business of buying foreign ships, when we are only within a span of our ability to build them at home as cheaply as Great Britain or any other country? The Senator from Missouri says it is because of sentiment. Somebody is tired of flying the British flag or of owning a British ship under a British flag, and he wants to fly an American flag. An American flag over what? Over an American ship? Oh, no; not over an American ship, but over a ship that is American only by purchase! Every piece of rigging, every bolt, everything from the keel to the topmast is to be the production of foreign labor, except the bunting, perhaps, and I do not know but by the adoption of this policy even the bunting of which the flag was made would be of British manufacture. My friend from Massachusetts shakes his head. I believe the governor of that State owns a bunting factory.

Mr. DAWES. The late governor.

Mr. PLUMB. The late governor of Massachusetts owns the only factory in this country for making bunting.

A navy and a merchant marine which is American only by purchase does not answer to the American sentiment from which has been evolved free government and a race of people proud of their achievements and confident of their future.

Such an American navy brings vividly to mind the major-general in the opera, who bought an old baronial estate, in which were buried some generations of previous owners, and who tearfully claimed the occupants of the tombs as his ancestors, because, while he did not even know who they were, he knew they were his, because he had purchased them!

Mr. President, an American marine composed of British ships would be a complete parallel to General Stanley's performance in the "Pirates of Penzance." If the American flag is to fly, let it wave over something which is American throughout; let it not be a case of false pretenses.

The American flag should float over the product of American labor, American skill, American capital, and American soil. What humiliation it would be for the ship carrying the national ensign in foreign waters, where they are the only exponents of American power, to be obliged to confess that not in one single plank or plate did she represent anything American; that notwithstanding our possession of all natural advantages and our boasts of progress and of power, we could not build a ship, but were obliged to buy from our rivals!

But, Mr. President, matters personal have been brought into this debate to prejudice the conclusion of the Senate. We have been solicited to believe that the few who have heretofore under discouraging circumstances constructed the vessels which constitute our coastwise marine and all that is left of our ships in the foreign trade are men who are so overreaching and corrupt that it is better to buy of our foes than to enter upon a policy of naval or merchant-marine construction which might possibly give added business to these men.

I have heard these suggestions before, but I believe they are without foundation in fact. I believe the only true charge that can be brought against them is that they are American ship-builders, men of skill, of capacity, of great enterprise, and, as I believe, of unsullied character, who are building American ships out of American material on American soil, and who know by a sad and disastrous experience the burdens that rest upon American ship-builders as compared with those of other nations, and who, as is proper, bring the evidence of this before Congress, and ask that they may be given even chance in the race.

Mr. President, they are the sole evidences to-day of the skill of the American people in the direction of ship-building. Eliminate John Roach, Cramp & Sons, Harlan & Hollingsworth, and men of that stamp, and there is nothing left to show that there ever was an American ship built upon American soil by American labor, or that the American people have any capacity for enterprise of that nature. And yet these gentlemen are held up before the American Senate and the American people to be animadverted upon, for what? Nothing is charged against them concerning the manner in which they build their ships, no accusation that they differ from other keen business men who, taking the chances of business, endeavor to secure a profit. I wish there were hundreds of such firms, and I will not by any vote of mine to be given here contribute toward breaking them down. I will do everything possible to aid other men of the same kind, imbued with the same energy, the same spirit, the same skill, in engaging in the same business, so that American ship-building shall not be limited to four or five establishments, but comprise a legion, if possible.

I want an American merchant marine, but I want that American merchant marine, as I have said, composed of ships made by Americans and out of American material. Here are the representatives on this floor of an interest in the South just coming into prominence. One of the most conspicuous of them sits before me now. He knows and I know that if the process of development remains unchecked there will be built of Georgia and Alabama iron, converted into steel, on the Gulf of Mexico, within five or ten years hence, ships as cheaply constructed, so far as material is concerned, as any that Great Britain can build. Yet, after going through all this work of preparation, all these years of delay, all these years of internal development, and getting ready for this contest, we are called upon to surrender without firing a shot, to give up the whole battle, and consent that as to any and every foreign trade we enter we shall do so dependent upon Great Britain; sustain the ship-yards of the Clyde; let the ship-building of this country cease, and let all the skill, all the investment of capital, all the accumulation of plant go to ruin, so that when we may want ships as against Great Britain some of these days her market will be closed to us, and we shall have no remedy.

But it is said we lack American sailors. Mr. President, the same cause that diverted the shipping-men of Boston and of New York out of that business into railroad building has taken the material for sailors out West, too. Now the moment a boy gets of age he leaves the old home and goes West. The soil of that section is an invitation to him to make his own home and maybe his fortune. This is the chance for exercise of his individuality, and his individuality takes him West; but that is soon to become a thing of the past. Nebraska and Kansas and Iowa and Dakota and Montana, inviting as they are, are not the same fields they were fifteen years ago. They are changing every day; and within the next decade, instead of emigration going from East to West, there will be a return tide of emigration. The West will give back with interest to the East what it has taken, and the young men of New England, born in sight of the sea, in lieu of following the example of their fathers, and, as in the last twenty years, seeking investment of ambition and of capacity and of skill in the Western portion of our country, will find their chance upon the sea or in foreign countries, where they can better realize their ambition for fortune than upon American soil. Wherever they go they will be missionaries for American commerce.

We should let the processes which have brought so much of good and promise so much for the near future go on. Year by year more goods of American manufacture go into foreign markets. The capital that has built the railroads will go into new factories and into new ship-yards. More of our people are going for permanent location each year to Mexico, to South America, to all foreign lands. They will do in a measure for our commerce what British commercial agents and colonists have done for that of the mother country. This will still more stimulate the building of American ships, and to this is to be added the outward tendency of which I have spoken.

With a continent under their feet spanned by great lines of railroad, with almost every acre of the American soil thus brought within reach of the whole world—we know the capacity of every acre now under the American flag—and armed thus with the accumulation, with the results, of all these years of labor, the American people are ready now with cheaper materials and with cheaper products, that have not been cheapened by cheapening the price of labor, but by the skill and ingenuity of American mechanics, by the aptitude they have displayed, by the keenness of competition which has developed everything in the situation, we are ready now and just on the eve of entering into a serious contest with Great Britain and Germany for the commerce of the world.

Shall we carry that commerce in American bottoms? Shall we manufacture its chief instrumentalities on American soil? Will we, with all this plenitude, with all these accumulations, of wealth, rejoicing in our strength as a strong man to run a race, and believing as we do in the glorious destiny of the American people, surrender our opportunities or shall we hold them? Shall we make supreme effort to build up our commerce or will we strike it down? The Senator from New Jersey says, "Strike it down." He states he would say to American shipowners, "If you can not stand this, then away go your shops!"

Mr. President, I am not ready for that. I am sorry to hear a Senator representing a State with, comparatively speaking, no agricultural capacities, built up by a system which has enabled his people to charge higher prices to my people for things they produce, which of course we were willing to buy, say in regard to this great industry so necessary to the welfare of the American people, "If it can not stand now a particular kind of competition, then let it go down!" I would never let it go down.

I hope to see the time when ships carrying the American flag will dominate every sea—ships which are truly American. I hope never to see the time when the American Government will need to buy a single ship anywhere for purposes of defense or offense. In that one particular at least more than any other, except in the production of food, we ought to be absolutely and unqualifiedly independent of the world.

Now, who are to be benefited by "free ships?" The consumers in the West? Not at all! It is to benefit a few men on the seaboard, who now can put their money into British ships if they desire. They can take stock in British companies and buy British ships and fly the British flag. Yet to gratify their pseudo sentiment, which strikes this blow at American ship-building, it is proposed to give them the choice of what they do—to say to these men of money, we will abandon, we will dismantle our ship-yards; we will discard the opportunities to American labor and yield them to men who have enough already. Surrender all to capital! That is what it is! It is not to bestow anything to labor, neither labor in the shop nor labor on the farm, but to give it to capital. Capital on the seaboard, capital interested in the foreign trade, capital largely disdainful of the interior influence of this country, and of that which most concerns the American people! That is the issue! The proposition is plainly in the interest of foreign manufacturers of ships, of those who employ foreign labor on foreign soil. Can there be any doubt as to which side the American people will take?

Mr. President, there is one contingent which has responded to the interests and to the wishes of the Democratic party under all circumstances and on all occasions. That is the Irish contingent. If I know anything about the Irish, which I confess is not much, I imagine they will not look with any great favor upon this effort of the American Congress to elevate their old oppressors above the American people or the American Government. Think of Irish-Americans in this country, which they have fought to maintain, whose fields they have tilled, whose every calling they have occupied fruitfully—think of these men contributing to a policy which hoists the American flag only where British labor and British capital are under it!

If this sentiment surrounding the American flag is to be held so cheaply, we might hire the British Government perhaps to exhibit it for us at so much an hour! If the flag is to stand for naught, if it is to represent nothing of American skill, no American investment, nothing that is material to the American people, let us emblazon it, like the sign of "Cuticura" and "St. Jacob's Oil," at so much a yard, through the medium of some enterprising sign-painter, on the rocks and roofs, on the highways and in the byways, and on the temples of the Old World, as an advertisement that there is such thing as the American Government. The cheaper this is done the better, for according to our Democratic brethren it is only the display of the bunting they are after.

But, Mr. President, the flag is nothing in itself. Unless it stands for something why float it? But the American people believe in it as a symbol, as representative of the power, the purposes of a great and free people. Wherever, therefore, it is spread to the breeze let it have underneath it all possible that bespeaks American labor, American genius, American courage, and American manhood.

Thus flying at home or abroad it will be the emblem of hope to the oppressed of the world, a symbol of liberty and progress.

Rivers and Harbors—Maryland and Delaware Free Ship-Canal.

SPEECH

OF

HON. FETTER S. HOBLITZELL,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 9, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7012) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. HOBLITZELL said:

Mr. CHAIRMAN: The policy included in the terms of the appropriation to aid in the construction of the Hennepin Canal I deem second to none in its importance upon which this Congress is called to legislate, inaugurating, as it will, a system of internal improvements of vast interest to the producing elements of the country, agricultural, mining, and manufacturing, destined to exert a wide, beneficial influence upon our interstate and foreign commerce, and I feel that I would be neglecting a prime duty did I permit the opportunity to pass without raising my voice in its behalf, being the author of a similar measure to connect the waters of the Chesapeake and Delaware Bays.

A century ago was begun the agitation of a policy of internal improvement by roads and canals that we might hold and people our vast Western territory. To-day we are brought face to face with the consideration of the same policy as an important adjunct to the rail-and-water system of transportation intersecting our common country in the interest chiefly of agricultural development and cheaper freight rates. Our fathers, in the practice of a wise statesmanship, formulated their legislation upon the trite aphorism of "the greatest good to the greatest number," believing the theory of our Government hinged upon that principle. Measure after measure was passed by Congress looking to the perfection of such a system of roads and water ways to intersect our country, to stimulate production, build up its wealth, and at the same time cement the bonds of our Union indissolubly. Necessarily the

power to do this work was vigorously opposed by the strict constructionists of our written Constitution, but none doubted the vital importance of such a system in the development of our vast resources. Millions of the public revenue from time to time have been appropriated and expended in various States in this direction and the system treated as the established policy of the Government, so that I do not deem it necessary to engage in the discussion of the constitutional power of Congress to aid such works of internal improvement at this point in our history, after nearly a hundred years of unbroken contributions by the Government to such measures of great public necessity. But since the application of steam-power for the purpose of transportation by means of railroads the entire country, States and Territories, has become so intersected by the iron and steel rivers of commerce, moved and controlled by the cupidity of individual capital exerting corporate franchises, that the legislative power of Congress to call into action the sleeping energies of our vast water ways has been rarely exerted except by appropriation of money for the improvement of rivers and harbors. And this generosity of our Government has been so unfairly dealt with as to bring odium upon the sum annually contributed for these beneficent purposes.

Sir, the influence of corporate power, direct and indirect, upon all legislation proposing to enlarge and perfect our splendid national advantages in aid of internal commerce is too well known to be seriously denied, and the intelligent and serious consideration of such a measure as proposed by the appropriation now before the committee is difficult to obtain.

Sir, before this splendid railroad system was ever dreamed of by the wildest visionary, as I have already intimated, our fathers gave ample proof of the vital importance of these highways to the commerce of America, and they earnestly sought to develop such a plan of internal improvement by roads and canals as would lead to the development of our boundless resources and build up the wealth of our people. But the genius of steam-power brooded over the situation, and, like Minerva from the brain of Jove, this great rail system, the wonder of the age, leaped into life and action. To-day, appreciated in the length and breadth of work, it is simply marvelous. During all this season of development of rail-power, moving with the speed of the wind and the regularity of the tides, the improvement by roads and canals was abandoned to individual enterprise in the several States. But I submit that what was wise statesmanship in the infancy of our Government, before the introduction of steam, both as to roads and canals, is pre-eminently wise statesmanship now as to canals, offering as it does the only practical solution of the great railroad problem of the age—the regulation of freight charges upon railroads by forces operative in transportation and in trade, and wholly within our constitutional powers.

The best minds of the country, devoted to the thoughtful study of this object, agree that it is only upon free highways that the laws of competition and of supply and demand can operate untrammeled in their regulating power over transportation rates of charges by railroads. And our plain duty, seeking to bestow the greatest good to the greatest number, commands the immediate development of such of these water ways as will open up the largest capacity of our water communication into such a system of free highways as will bring its regulative power into the fullest action.

The advantages to flow from such a factor can be better imagined than portrayed by any words I might use to describe them.

The rich harvest of wealth reaped by railroads—almost fabulous—is a heavy tribute wrung from the tillers of our soil, the food producers of our people, the great agricultural interests of the country; and whatever cheapens the cost of transportation benefits both the producer and consumer, and, like the quality of mercy, is twice blessed. Contemplate for a single moment the wonderful food production of America as shown by the statistics of the Tenth Census, and calculate the magnitude of the saving to wealth by the reduction alone of one penny per bushel upon the freight charge for the transportation of the vast yield of our grain product for a single year. Add to this productive power the energy of this wealth so saved from year to year, and you can aggregate the total of our agricultural capacity at the end of the next decade. Do I speculate? Am I visionary when I declare that America has the golden opportunity of becoming the bread-producing power of the world, if our lawmakers act with the wisdom of statesmen?

In 1880 the whole country produced 2,666,313,534 bushels of wheat, corn, oats, and barley, while 1,511,435,711 bushels were produced by Illinois, Iowa, Wisconsin, Minnesota, Missouri, Nebraska, Kansas, Arkansas, Texas, and Dakota. This Territory, with Kentucky, Tennessee, Georgia, Alabama, Mississippi, and Louisiana, in the aggregate show 151,686,230 acres of uncultivated farm lands, inviting development defying all calculation as to its possible aggregate product when capital moves in its cultivation.

Enormous as this vast product of agriculture is, it is quite insignificant as compared with the rapid increase which has transpired from year to year. Thus in 1865 the total wheat product of the United States was 151,999,296 bushels. In 1880 the nine States and one Territory (of Dakota) exceeded the yield by 51,556,075 bushels.

The total exports of grain during the year ending June 30, 1880 (wheat flour, corn-meal, and rye flour being reduced to bushels), amounted to the large sum of 284,707,808 bushels, of which 180,304,181 bushels consisted of wheat, and 99,592,329 bushels of corn. The totals of both wheat and corn amounted to 279,876,510 bushels, and constituted 97.25 per cent. of the total exports of grain during that year. The year 1872, says Mr. Nimmo, appropriately marks the beginning of the transportation of grain by rail from points as far west as Chicago to the Atlantic seaboard, when the exports of wheat from the United States increased from 26,423,080 bushels to 153,252,795 bushels in 1880; the exports of wheat flour increased from 2,514,535 barrels in 1872 to 6,011,419 barrels in 1880; and the exports of corn increased from 34,491,650 bushels to 98,169,877 bushels during the same brief period—an increase, he declares, constituting one of the most remarkable developments of commerce ever recorded in the commercial history of this or any other country.

In the decade from 1871 to 1881, to June 30, the increase was from $428,398,908 in 1871 to $883,925,947, amounting to the aggregate of $445,527,039, an increase which was mainly due to the large export of breadstuffs, provisions and tallow, cotton and its manufactures, live animals, leather and its manufactures, and wood and its manufactures, constituting 82.12 per cent. of all the increase of domestic merchandise, as exhibited by the following table:

Commodities.	Value of exports during year ended—		Increase.
	1871.	1881.	
Bread and breadstuffs	$79,381,187	$270,332,519	$190,951,332
Provisions and tallow	41,870,254	158,328,896	116,458,642
Cotton and its manufactures	221,885,245	261,267,133	39,381,888
Live animals	1,019,604	16,412,398	15,392,794
Leather and its manufactures	1,897,395	8,088,445	6,191,050
Wood and its manufactures	12,916,542	18,600,312	5,683,770
Total increase in the export of above articles			374,059,476

Of all this increase the value of the breadstuffs, provisions, tallow, and live animals, which together amount to $332,802,768, constituting 79.5 per cent. of the aggregate, are chiefly the products of the tier of States and Territories before named.

This vast production both for home consumption and exportation to foreign countries was specially brought to the notice of Congress by the President of the United States, and on the 16th of December, 1872, the Senate of the United States passed a resolution and appointed a select committee to investigate and report upon the subject of transportation between the interior and the seaboard. That committee made a most able and elaborate report of their extended investigation into this delicate and complex subject, covering the fullest consideration of the question of freight rates and prices of cereals here and in foreign countries, the due and most natural course of our grain trade, the relative cost of transportation both by water and rail; and the conclusions of the committee are that our vast agricultural interests can not rely upon reductions in freight charges as the fruit of legitimate competition among existing railroads now operating or that may be added in the future to this branch of transporting power.

Private cupidity will always govern and control the operations of these corporate enterprises, and their immense power singly or in combination will ever be equal to the exaction of the uttermost farthing which the agricultural products of the country will bear in the imposition of their schedule of rates, illustrating and pointing the hopeless struggle of Laocoon and the serpent. This distinguished committee considered also the grave and delicate question of Government interference in the regulation of the transportation rates of these gigantic railroad corporations, and as well the feasibility and propriety of the policy included in the construction of railway lines owned and controlled by the Government in order to secure by honest competition just and fair rates for transportation, and they solemnly concluded that the only legitimate, feasible, and certain mode of relief left to the country must be the outgrowth of a comprehensive system of improvement of our natural water ways and the construction of artificial ones.

Upon this question there can not be two opinions, and the sooner the people are awakened to their true interest and the necessity of returning to that wise policy of our fathers, abandoned for a time in the interest of railroad development and in the more rapid carriage of freight, the better for both producer and consumer. Who are interested in the defeat of such legislation? The farmer who tills his soil, scatters his seed, and then trusts the bounty of heaven for rain and sun to ripen for the sickle an abundant harvest of golden grain? What need that he should enlarge his power of production over and above the wants of his family if the bulk of his surplus is to pass into the coffers of railroad magnates to swell to fabulous proportions the wealth of their stock and bond holders? Sir, this is a vital question to the whole people. The obligation rests with the Government to stand forth in its might and power and command for our people by every legitimate means within the Constitution that measure of justice now withheld by the greed of cap-

ital, controlling the commerce of the country over the vast system of railroads penetrating every State of the Union.

In the measure I proposed for the construction of the Maryland and Delaware Free-Ship Canal is presented the opportunity to secure a most powerful adjunct in the great work of restriction and regulation of railroads in their merciless greed, and destined to eat up the legitimate fruits of production, unless this natural and feasible regulative power of free water ways is called into full play. This measure not only commends itself to Congress, if our Government is to maintain a fostering care over its commerce, foreign and domestic, but for its inestimable value as a short interior line of communication, and a powerful auxiliary in connection with the policy of our Government in perfecting its coast defenses, to enable it to meet the dire exigencies of a war with maritime powers. The building of this canal has received the consideration of the Government for many years past, was favorably reported upon by the Committee on Railways and Canals at the first session of the Forty-seventh Congress, and an appropriation of $10,000 made for the purpose of having determined by a survey and report of the Engineer Department of the Government which of the three routes previously surveyed and estimated for was the best and cheapest both for the purposes of commerce and the national defense, the bill having left the question of route to be determined by a board of Army engineers to be appointed by the Secretary of War, with power in the majority to determine the route. That survey was completed and regularly reported to this Congress, and the recommendations in it have been incorporated by way of amendments to the bill, which was again favorably reported by the Committee on Railways and Canals and is now upon the Calendar of the House awaiting consideration.

Sir, Baltimore, at the head of the Chesapeake Bay, holds geographically a commanding position with respect to all Western traffic seeking a market in foreign countries, and its terminal facilities for the handling and shipment of agricultural products are of the amplest character, commanding a large share of that trade during the past decade. The Baltimore and Ohio Railroad alone exhibits a growth in through tonnage from 1871 to 1883, East and West, almost miraculous, as will be seen by the following table:

The tonnage of through merchandise, East and West, was for—

	Tons.		Tons.
1871	435,207	1878	1,149,499
1872	557,609	1879	1,425,629
1873	640,265	1880	1,980,397
1874	752,256	1881	2,014,110
1875	872,101	1882	2,043,227
1876	1,093,393	1883	2,108,325
1877	1,047,645		

By reason of that geographical position this Baltimore and Ohio Railroad, the pioneer of our rail system, asserts its strength and power in the great contests which from time to time have sprung out of the rivalry of the various trunk lines for this east-bound trade, the port of Baltimore being nearer to every interior point of those sections of the country drained by these several lines than the great metropolis of New York, as will appear by the following tabulated statement of distances:

Distance from—	To New York.	To Baltimore.	Difference.
	Miles.	Miles.	Miles.
Chicago	912	804	108
Detroit	672	639	33
Toledo	695	579	117
Cleveland	598	466	112
Pittsburgh	444	327	117
Cincinnati	757	579	178
Saint Louis	1,065	920	145
Indianapolis	825	684	141
Louisville	851	696	155

Of all the tonnage comprising the traffic at this port the receipts in grain alone aggregated an increase from 7,753,508 bushels in 1868 to 37,867,054 bushels in 1881, which does not include flour receipts, a falling off in 1882 and 1883 resulting from the shortage in crops during the year 1881. The value of the export and import trade of Baltimore in 1882 amounted to $57,992,744, while its export trade alone in grain and other products of agriculture reached in 1883 as follows:

Wheat, bushels	15,500,000
Corn, bushels	10,500,000
Cotton, bales	225,000
Flour, barrels	275,000
Flour, sacks	200,000
Tobacco, hogsheads	45,000
Tobacco, manufactured, pounds	240,000
Lard, pounds	9,500,000
Cattle and sheep	20,600

The national character of this work is manifest from the commercial advantages to be derived and its importance as an interior line of communication for use in the national defense.

Commercially speaking, its construction will be of inestimable value; because it will provide an additional outlet for the distribution of the produce of the Ohio and Mississippi Valleys at Baltimore, constituting it the peer of New York in all those respects which make up the advantages of shipping ports in matter of distance, time, and freight charges, creating and stimulating a vigorous competition, with its shared benefits to the producer of the West, the importer of the East, and the consumers of the whole country on all East and West bound traffic.

Mr. Nimmo, in his report of foreign commerce for 1883, shows the growth of our export trade since 1820, and I append it to show how much the largest proportion of that trade is of agricultural products than all others, and the vital importance of developing every element of our commercial power in aid of the fullest agricultural development and distribution for consumption.

Values of exports from the United States of domestic merchandise and of the exports of the products of agriculture, and the percentage which the exports of such products bear to the total value of exports of domestic merchandise, for the years mentioned.

Year ended June 30—	Value of exports of domestic merchandise.	Value of exports of merchandise other than products of domestic agriculture.	Value of exports of products of domestic agriculture.	Per cent. of products of agriculture.
	Dollars.	Dollars.	Dollars.	Per cent.
1820*	51,683,640	10,025,967	41,657,673	80.60
1830*	58,524,878	10,429,694	48,095,184	82.18
1840*	111,660,561	19,112,404	92,548,067	82.93
1850	134,900,233	26,294,520	108,605,713	80.51
1860	316,242,423	59,681,451	256,560,972	81.14
1870	455,208,341	94,019,858	361,188,483	79.34
1871	478,115,292	109,649,281	368,466,011	77.07
1872	476,421,478	107,624,853	368,796,625	77.41
1873	575,227,017	128,327,013	446,900,004	77.69
1874	633,339,368	131,967,877	501,371,501	79.16
1875	559,237,638	128,931,068	430,306,570	76.95
1876	594,917,715	138,804,200	456,113,515	76.67
1877	632,980,854	173,246,706	459,734,148	72.63
1878	695,749,930	159,557,057	536,192,873	77.07
1879	699,538,742	153,062,039	546,476,703	78.12
1880	823,946,353	137,985,262	685,961,091	83.25
1881	883,925,947	153,531,004	730,394,943	82.63
1882	733,239,732	181,019,013	552,219,819	75.31
1883	804,223,632	184,954,183	619,269,449	77.00

* Year ended September 30.

Sir, this competition must have a twofold effect, as I have intimated: One to lead to a reduction of the rate of freight charges to and at the port of shipment to foreign lands; another, to stimulate the producing energies of our great grain empires; and it is the highest order of statesmanship to provide for that development. Our past wonderful growth admonishes us to open up this natural gateway to the sea to meet that productive power when it shall be at its zenith, and New York is unequal to the mighty task of discharging our cereal surplus to a foreign market.

In no sense can this be tortured into mere local rivalry with that great metropolis, the recognized heart of all our commercial and financial operations. No, sir. Like that great motor of the human body, New York should extend its growth and power, and will inevitably do so in proportion as the whole system working harmoniously adds to the growth and power of its parts.

The commerce of this people is the life-blood of our national wealth. Magnify that current by whatever means you may, or at whatever point of a perfected system of commerce, and necessarily you magnify the supremacy of the power of the great commercial centre of the country at New York. I appeal to members upon this floor against that spirit of petty rivalry seeking a present advantage. No such disposition should be permitted to stand in the way of progress, and this development of a perfect whole, outlining the future giant of our trade, foreign and domestic, moving with colossal stride as the natural and inevitable manhood of the present vigorous child of our commerce. The States of Maryland and Delaware could not be expected to build a free highway to the sea for the commerce of all the States and of all the world, and its construction by these States would first require the assent of Congress. If they should undertake its construction it could only be built and sustained as a toll canal, which would destroy its regulative power on rates of railroads, and the country would lose the value of the competition.

But, Mr. Chairman, I submit that this canal should be built by the Government as a means of national defense, and I call the attention of the country to an extract from the report of the present Secretary of the Navy, made to this Congress, recommending its construction as of the utmost importance. The Secretary says:

There is one measure of national defense in regard to which the argument can not be made, as in the case of ships and guns, that modern discovery is likely to make such improvements in the art of construction that action might for the present be deferred. This is the creation of an interior coast-line of water ways across the head of the peninsula of Florida, along the coast from Florida to Hampton Roads, between the Chesapeake Bay and the Delaware, and through Cape Cod. To these should be added a railroad from the mainland of Florida to Key West. To secure the combined commercial and military advantages which these avenues for merchant and naval vessels would afford, work should

be immediately begun and deliberately and economically prosecuted, and not left to be done hastily and expensively in an emergency.

And to this I desire to add an extract from the report of Captain Turtle, an engineer of the United States, who made the surveys from the Maryland and Delaware Canal, giving force, as it does, to the suggestions of the head of the Navy Department. He says:

It will be doubted by no one that a deep-water connection between the two bays would be of vast importance in the contingency of war with a maritime nation. Such a connection would provide a means of concentrating the floating defenses of the two bays, and besides this would render more secure the communications between the naval stations of Philadelphia, and Norfolk, and Washington. Vessels defending a port have two offices to perform, the one being to assist in the direct defense, or to prevent capture or occupation by a hostile force, the other being "the prevention or breaking up of blockades." Without the canal a blockade at the capes of the Delaware would close the port of Philadelphia, or a blockade at the capes of Virginia would close the outward commerce of Baltimore and the other ports of the Chesapeake. With the canal built where communication would be secure, neither the ports of Philadelphia nor of Baltimore could be closed, unless an effectual blockade were established both at the Delaware and Virginia capes. The disadvantage to the attacking party is obvious, while the defending vessels could concentrate at either outlet, and breaking the blockade at one point would open both ports and render the blockade useless at the other outlet.

It may be assumed that if a war with one of the great naval powers should arise, and the mere appropriation of the money could provide such a channel of communication between the bays, the amount would be at once provided without hesitation. That would, however, be too late.

I appeal to this committee in behalf of this appropriation in order to inaugurate this policy not only of improving our natural water ways, but the construction of all artificial ones, in the development of that full regulative power over railroads; in the determining of rates of freight, and as a stimulant to production, and wherever they will afford the Government additional means of protecting her people in the throes of war.

Our Indian Policy—"The Sanctity of Plighted Faith"—How "The Indian Problem" is to be Solved—With a few Words in regard to our Public Land Policy.

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 10, 1884.

The House having under consideration the bill (H. R. 4384) relating to the disposal of the Red Lake Chippewa reservation, in the State of Minnesota—

Mr. CUTCHEON said:

Mr. SPEAKER: I shall occupy the attention of the House but a short time with what I shall say in criticism of this bill. What I may say will not be to call in question the good faith or the integrity of the committee which reported it, or of any member of that committee. I know too well the high character of these gentlemen and their well-known reputation in this House to believe for a moment that this bill is reported for any other purpose than that which appears upon its face; that is, to open this reservation to settlement. But a somewhat careful examination of this bill and all of its provisions has led me to believe that through it great abuses may arise, and that by it not only the Indians but other interests may suffer.

The idea which I have in my mind has been indicated by other gentlemen upon the floor. I think if this had been entitled "A bill to enable pine-land speculators to acquire cheap stumpage on the Red Lake Indian reservation in Minnesota" it would have been a more appropriate title than that which it bears. At least it would express the effect, if not the intent, of the bill.

As I look through this bill I find that its presumptive purpose is indicated in its preamble, in the second paragraph of the preamble, as follows:

Whereas nearly all the lands of the United States in said State suitable for agriculture, and not included in any Indian reservation, have already been disposed of, and there is a great demand among the people of said State that the Indian title to said reservation be extinguished, &c.

That language, if it is to have any effect, would convey to the mind of those who read it that this land is wanted, not for the pine upon it, but that it is the agricultural land, that is desired for agricultural purposes. And yet as I read through this bill, section by section, the impression comes to my mind, and is strengthened with every section, that the real purpose of the bill is not to acquire agricultural lands at all, not to open that country to agricultural settlement and cultivation, but to give somebody the opportunity to acquire the 500,000 acres of pine lands.

Mr. NELSON. Will the gentleman allow me to interrupt him?

Mr. CUTCHEON. Yes, sir.

Mr. NELSON. If the gentleman from Michigan can suggest any manner in which that pine land can be sold upon better terms than under the provisions of the bill, I should be glad to have him do so. For my own part I have no objection if the House sees fit to put in a rate of $2 or $3.

Mr. CUTCHEON. To proceed, Mr. Speaker: I shall not undertake here and now or elsewhere or at any other time to answer the remarks of the gentleman from Colorado [Mr. BELFORD], for I concede that so far as I am concerned they are entirely unanswerable. I shall not undertake to answer them. If we were to follow the leading of the gentleman from Colorado he would take us out of this last quarter of the nineteenth century and set us back into the middle of the Dark Ages. The gentleman from Colorado evidently entertains the belief that was expressed elsewhere and in regard to another subject, that the red man has no rights that white men or anybody else are bound to respect. Mr. Speaker, I am not an admirer of the American Indian.

Mr. BELFORD. I should like to ask the gentleman from Michigan——

Mr. CUTCHEON. I do not believe in the heroics of Leatherstocking or Fenimore Cooper or anybody else in regard to the American Indian. I concede that the American Indian is a barbarian, has been a barbarian always; but because he is a barbarian it is becoming that we, who dwell in the light of the last quarter of the nineteenth century and who boast of our higher civilization and our Christianity, should treat him as civilized men and as Christians ought to treat him.

Mr. BELFORD. Will the gentleman permit me to ask him a question?

Mr. CUTCHEON. With pleasure.

Mr. BELFORD. What right has the red man of the forest that is pre-eminently great over the rights of the white man, who represents the highest type of civilization?

Mr. CUTCHEON. Mr. Speaker, I will answer the gentleman's question by asking another. What right have we to come here upon the land that was primevally the land of the Indian and deprive him of his rights, take away from him his soil, and make him an outcast upon that domain which the Almighty gave him from the foundation of the world? What right have we, when we have conceded this grant to those poor Indians by solemn treaty, which we as a great nation are bound more jealously to regard than we would be if they were our equals—what right have we to dictate to them upon what terms or when or how they shall part with that which is their own?

But, Mr. Speaker, I had not thought to dwell upon this general question of the Indian problem. It is one of those slow-moving problems for the solution of which time is requisite. The solution will come with the moving of the generations as civilization came to our forefathers. Let us not forget that it is not much more than a thousand years since our ancestors in the British Isles were worshiping with human sacrifices in their Druid temples, clothed in the skins of wild animals, and dwelling in the caves of the earth; and thence let us learn charity toward these red men who dwell with us and appeal to us for the protection of their domain and their homes. I took recent occasion pending the discussion of the Indian appropriation bill to express my views as follows:

There have been several different ways tried of dealing with this question. We have at one time treated the Indian tribes as independent nations with whom we could make treaties as with foreign powers. They have been nations to make treaties with until we have obtained their great domain; but we have not recognized them as nations for the purpose of maintaining and observing treaties on our part after we had gained possession of their lands.

Again we have treated them as wild beasts, without the rights of humanity, to be hunted with bloodhounds as they were in the Florida wars, and not entitled to the usages of civilized warfare.

We have begun, Mr. Chairman, within the more recent period of our history to treat the Indians as human beings, rational and immortal, who may be civilized, educated, and Christianized. This last is the one plan that promises the ultimate solution of the Indian problem.

I believe that the friends of Indian education have themselves been surprised at the success of the new method and the readiness with which the Indian children take to education.

The old idea that "the only good Indians are dead Indians" has been given the lie at Carlisle, at Lincoln School, at Hampton, at Forest Grove, among the Dakota schools, and in fact wherever the educational plan has been faithfully tried.

This question of how to treat the Indian problem must be met. The old idea that the Indians are "dying out" is not a true one. At the present time they are increasing, and they will hereafter increase more rapidly. They are soon to become factors in our States and local communities. It is only a question of a few years when they are to become citizens, and it is for us to prepare them for the rights and duties of citizenship. The first thing is to educate the children. Little can be done for the older Indians but to keep them as peaceable and contented under their changed relations as practicable.

But our hope is in the young. The first thing for us to do is to carry out our treaty stipulations with these Indian tribes. In the last report of the superintendent of Indian schools, upon page 7, I find the following, which I will read:

"Additional day-schools are also required at several of the agencies. In connection with this matter I present a table, showing our treaty obligations to several of the tribes named above and others not included in the above list, by which it will be seen what our failures have been. Due consideration is also given to what has been done for each tribe named. It will be seen by reference to this table that the amount which would have been required to fulfill these treaty obligations up to and including the present fiscal year would have been $3,759,400."

Under our treaties with these several tribes we are bound to maintain one school for every thirty children of school age in the tribe and one school-house

and one teacher. There is due to these tribes, under these treaty stipulations, for this purpose, the sum of $3,759,400, as follows:

Apache, Kiowa, and Comanche Indians (Exhibit A)	$284,200
Bannock Indians (Exhibit B)	44,200
Cheyenne and Arapaho Indians (Exhibit C)	283,100
Crow Indians (Exhibit D)	262,200
Navajo Indians (Exhibit E)	792,100
Northern Cheyenne and Arapaho Indians (Exhibit F)	167,800
Shoshone Indians (Exhibit G)	141,700
Sioux Indians (Exhibit H)	1,491,600
Ute Indians (Exhibit I)	292,500
Total	3,759,400

At the date of the last report of the superintendent there were seventy-five schools, supported in whole or in part by the Government at a total cost of $339,968.17 for the last fiscal year. I call attention here to an itemized table, giving financial statistics of Indian boarding-schools for the year ending June 30, 1883.

The first thing we have to do for these Indians is to fulfill our treaty stipulations with them; to do simply what we have agreed to do; to put at their disposal for educational purposes this fund which we owe them, as honestly owe them as one man can owe another any honest debt.

The second thing we have to do is to require of them to hold their lands in severalty. The very foundation of civil order is the ownership of property and the responsibility for its use. It gives, first, local attachment and individuality; second, it inculcates respect for the rights of others; third, it creates a regard for law and order and a dependence upon orderly government. It inspires the spirit of patriotism and attachment to the government which protects them and their property.

In the third place, we must give them civil rights under civilized law, and political rights as rapidly as their tribal relations are dissolved. Until these people are made amenable to the laws of the commonwealth within which they reside they will progress but slowly and under great disadvantages. They must be incorporated into the great body of law-acknowledging and law-abiding citizens, and then they will quickly assimilate in manners, in progress, in religion, and to those around them, and, swept along in the great current of civilizing influence, they will mingle in the common mass, and the "Indian problem" will be finally solved. But to this end we must provide the adequate means, and the first and most important of these is to keep all our treaty stipulations in the matter of education.

In this direction I firmly believe lies the true solution of this difficult question. I wish now to address myself to some of the specific provisions of this bill. And, first, as to the extinction of the Indian title. This land is a part of the original Indian lands of this continent. It never has belonged to anybody else. In the various treaties which this Government has made with these Chippewa Indians this land has been conceded to them and recognized as belonging to them. I take it that the title is in them just as perfectly and essentially as the title is in the gentleman from Minnesota or in myself to any tract which he or I may own. But this bill proposes to take this land—in what way? A commission is to be appointed by the Secretary of the Interior, or he may act in person, to procure a cession and relinquishment of the Indian title, "and such cession and relinquishment shall be deemed sufficient if made by the chiefs or headmen of said tribe of Indians in a public council or meeting of the band, assented to by a majority of the male adults of said band present at such meeting."

Mr. NELSON. Will the gentleman allow me to interrupt him?

Mr. CUTCHEON. Certainly.

Mr. NELSON. I want to say to the gentleman from Michigan that on the motion of some gentleman, I forget who, that was changed so as to require the assent of the majority of the tribe.

Mr. CUTCHEON. That is better.

Mr. NELSON. Allow me to say further, I stated, but perhaps the gentleman from Michigan did not hear me, that I had no objection to putting in any other number, two-thirds or three-fourths.

Mr. CUTCHEON. That would improve it very much. But the point I am going to make is this: it is a breach of that general principle of English jurisprudence that it requires two parties to make a contract. It would appear that we are going to make the contract for both parties. We who are the grantees in this arrangement are to determine what shall be sufficient upon the part of those with whom we contract. Then the bill goes on to provide further in the latter part of section 1—

And the acceptance and approval of such cession and relinquishment by the Secretary of the Interior shall be deemed full and conclusive proof of the assent of said Red Lake Chippewa Indians to said cession and relinquishment.

Just think of that for a moment. The assent of the Secretary of the Interior, who represents us and not these Indians, shall be taken as "full and conclusive proof of the assent" of the Indians. In other words, we are going to assent for both parties. The Secretary of the Interior is to assent for us, and then his assent is to be "conclusive" upon the Chippewa Indians as well. I object to that. It is enough for the Secretary of the Interior to act for us, without attempting also to bind conclusively the Chippewa Indians.

That ought to be amended so that the joint act of the contracting parties shall be binding.

The second section provides:

SEC. 2. That as soon as the cession and relinquishment of said Indian title is obtained, the Secretary of the Interior shall cause so much of said reservation as is agricultural or pine lands to be surveyed as Government lands are surveyed; and in making such surveys the surveyor shall carefully ascertain and note and return on the plat and in the field-notes all forty-acre or lesser tracts on which there is any pine timber standing or growing, and which tracts are for the purposes of this act termed pine lands; and upon the completion of such surveys the Secretary of the Interior shall cause the stumpage upon each forty-acre or lesser tract of said pine lands to be estimated and appraised by three competent men to be appointed by him. Such stumpage shall be estimated by the thousand feet of board-measure upon each separate tract of forty acres or less, and such appraisal shall be at the rate of a certain sum per thousand feet, and shall in no event be less than $1 per thousand feet.

Now I call the attention of the House to this fact: right here at the very beginning of this bill everything but pine land passes out of view. The pine land seems to be about the only thing that the bill is intended to provide for. Then section 3 of the bill provides:

SEC. 3. That after the said pine lands have been surveyed, and the stumpage thereon estimated and appraised as aforesaid, the Secretary of the Interior shall, after having given three months' notice through newspapers of general circulation published at Saint Paul, Duluth, and Crookston, in said State, through the United States land officers for the district where the lands are situate, offer for sale and sell, at public auction, to the highest bidder for cash in hand, in forty-acre or lesser tracts, the stumpage on said pine lands, with five years' right of removal.

And here I desire to call the attention of the House to another point: that there is no limitation whatever upon the amount of this pine land that any one person may acquire. It is to be sold in forty-acre or lesser tracts, but there is nothing to prevent a single individual from acquiring the entire 500,000 acres of pine land. I think that ought to be guarded in some way. I believe it is contrary to our present policy to allow lands, or any products of lands, such as pine timber, to be acquired in such unlimited tracts.

Mr. NELSON. Should not the highest bidder be allowed to get it; the man willing to pay the most for it?

Mr. CUTCHEON. I do not know that; we do not pursue that course in our general land policy. The highest bidder for the limited tract should get it, but the tract should be limited.

Mr. NELSON. But they do not get the land in this case.

Mr. CUTCHEON. But they get the whole value of the land. The section goes on to provide: "But such sale shall not be for a less price than the appraised value, nor shall the stumpage on any tract be sold at a less price than $2 per acre."

Here I desire to call the attention of the House to another fact. I do not remember any class of realty in the United States to-day that is appreciating more rapidly, especially in that part of the country, than pine land or pine stumpage. It has been my fortune for about eighteen years to live in the midst of a pine country. I remember, when eighteen years ago, I took up my present residence, that I could have acquired millions upon millions of pine stumpage at 50 cents a thousand feet, while now you can not acquire a forty-acre lot within five miles of water at less than $4 a thousand feet stumpage, and the most of it is five or six dollars a thousand.

This land under consideration is unquestionably valuable land. Its principal value consists in the pine stumpage upon it. Take that northern belt of the States from the Atlantic to the Pacific, including the great pine-bearing States of Michigan, Minnesota, and Wisconsin, and while the amount of pine is constantly diminishing, the demand for it through the influx of population is constantly on the increase. With the increasing demand and the diminishing supply the result is that the price per thousand feet is increasing very rapidly.

Take this very region of country to which this bill relates, with the great prairie States and Territories on the south and the west and the pineless regions of Manitoba on the northwest; the demand for pine is increasing there very rapidly. If the Chippewa Indians are to realize the benefits of this property of theirs, this is no time to hasten it into market. If they are to reap the full benefit, we should make no haste in the disposal of it.

And here let me call to the memory of gentlemen a single fact. One of the richest educational institutions in this country to-day is Cornell University. It has a fund of several millions of dollars; I can not state exactly how much, but well up into the millions.

How did it become rich? When the grant of agricultural college scrip was made to the State of New York Cornell University succeeded to that grant. Instead of locating that scrip, as was done by most of the States, upon agricultural land, it was located upon pine lands, mostly in Wisconsin; and the increase in the value of those pine lands in the last twenty years has made Cornell University one of the richest educational institutions upon this continent. Just so it will be with this pine land. The country is opening up; railroads are penetrating toward it; water courses are being cleared out. It is becoming accessible. There is a boundless demand for this land. If it be held for the purposes of this trust it will in a few years double and treble in value.

If, on the other hand, there is danger that white speculators are to have the benefit of this grant, and are to realize the profit upon this pine land, then it ought not to be forced into the market at the present time, but should be held until the exigencies of the case require that it shall be disposed of.

Here the gentleman from Minnesota [Mr. NELSON] meets me with this letter which he has read and this argument in regard to "dead and down timber." I can very clearly see, Mr. Speaker, that there is in this direction a wide-open door for fraud. I have no doubt that frauds have been committed in the manner he describes. I am too familiar with the methods of pine-land speculators to have any doubt upon that subject. I am too well acquainted also with the simplicity as well as the cupidity of these Indian tribes, and the ease with which they are defrauded, not to believe that there is here an opportunity for

fraud. But it is a door that the Secretary of the Interior and the administration of this Government should close at once and forever. It is fully within the power of the Government to do it; and those who have charge of the administration of the law owe it to themselves and their good reputation, as well as to the Indians, to see that this door to fraud is closed, and closed immediately.

I pass now to the fourth section of this bill, which provides—

SEC. 4. That as soon as any of the lands on said reservation other than pine lands have been surveyed, the Secretary of the Interior shall give notice thereof, which said notice shall be published in at least ten of the principal papers published in the State of Minnesota for the full term of sixty days from the date of said notice; and at the expiration of said sixty days the said lands so surveyed, and no others, shall be open to settlement, and may be disposed of by the Government under the homestead and pre-emption laws of the United States, but in no other manner whatsoever; and no right of any kind shall be acquired by reason of any settlement on these lands made prior to the expiration of the sixty days of notice aforesaid: *Provided*, That the United States shall compensate the Indians for all of said lands that may be disposed of under the homestead laws at the rate of $1.25 per acre.

This applies, as I understand, to agricultural land, not to pine land. One criticism I would make upon this section is that it provides for the disposal of this land under the pre-emption law. Now we are at the present time engaged upon a bill one of the main purposes of which is to wipe out the pre-emption law. If any man desires to acquire land upon which to settle in good faith he can do so under the homestead law. I would suggest, therefore, that the words "and pre-emption," should be stricken out, because I am firmly convinced from my observation that the pre-emption laws are more used for the purposes of fraud than almost any other of our land laws. All through the timber country speculators employ workingmen from their camps to go and pre-empt forty, eighty, or one hundred and sixty acres of land, and when they have "proved up," as the saying is, the man who has employed them puts in the cash at $1.25 per acre, and thus acquires large tracts of land, which are promptly transferred by the fraudulent settler to his employer, receiving some prearranged consideration therefor.

I am convinced that the pre-emption law has outlived its usefulness and should be repealed. Therefore, if this bill is to become a law in any form, I should desire to see this clause stricken out.

Mr. NELSON. In this bill as proposed to be amended that clause is stricken out.

Mr. CUTCHEON. Mr. Speaker, I have extended my remarks far beyond my purpose. I have briefly indicated some of the points which to me seem objectionable. Most of them may be remedied by amendment. But the one thing that I do insist upon is that we shall deal with these Indians in such manner that when this great reservation is broken up the interests of the Indians shall be consulted and shall be the controlling factor. When that is done, and only then, I will give the bill my voice and my vote.

The Blair-Willis Educational Bill and Objections Thereto.

SPEECH

OF

HON. ISAAC M. JORDAN,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 3, 1884,

On the bill (S. 398) to aid in the establishment and temporary support of common schools.

Mr. JORDAN said:

Mr. SPEAKER: I desire to avail myself of this opportunity to address the House in opposition to the bill reported by Mr. WILLIS from the Committee on Education, by which it is proposed that the National Government shall give pecuniary aid to the States in establishing, maintaining, and carrying on their common or public schools.

This bill provides in the first section for a direct appropriation by Congress of $55,000,000 out of the Treasury of the United States for the purpose of aiding in the support and maintenance of free common schools in the various States of the Union. The second section provides that the Secretary of the Treasury shall apportion the money so appropriated among the several States according to the number of their respective populations of 10 years old and upward who can not read and write, and that the same shall be paid over to the States, credited to their school fund, and disbursed according to their educational system. This money is to be paid in ten installments—the first year $10,000,000, and decreasing at the rate of $1,000,000 a year until the whole is paid.

There are other provisions in the bill worthy of consideration.

This bill involves the question whether the Congress of the United States have power under the Constitution to appropriate money out of the Treasury of the United States and donate it to the several States to aid them in maintaining and carrying on their system of common schools; and its advocates contend that the power is given, while those of us who are opposed to the bill claim that no authority can be found for this measure, either in the express or implied powers of the Constitution.

It must be admitted at the very threshold of this argument that it is incumbent on the author and friends of this bill to show to the House that it is authorized by the Constitution and to point out what provisions of that instrument justify it, for Congress has not an unlimited power of legislating, but only such as is granted by the Constitution, and all other is "reserved to the States or to the people."

I desire further to say *in limine* that the fact that Congress have never at any time heretofore claimed or exercised this power of levying taxes and appropriating money out of the public Treasury for the purpose of aiding the States in carrying on their systems of common-school education is a very strong argument against the existence of any such power, as it is almost incredible to suppose that a power so great in its extent, so potent either for good or evil, should have lain dormant and undiscovered during the one hundred years of our existence as a nation. And, indeed, as this bill asserts for the Federal Government a power of taxing the people for a purpose never heretofore supposed to exist, and the right to dictate to the States what school systems they shall have, or deprive them of their share of the appropriations to be made from the public Treasury, it becomes this House to give full and grave consideration to this matter before it makes so great departure from the ways of our fathers.

Mr. Speaker, secession was the fatal heresy of State rights carried to one extreme; consolidation is the heresy of national sovereignty carried to the other. The former meant the destruction of the Union; the latter menaces the existence of the States. The one would have destroyed all government, the other all liberty. The ship of state has been floating and drifting for many years in unsafe waters between Scylla and Charybdis. Is it not time that we should go back to port in the still waters of the Union, and fasten our anchors upon that great rock, the Constitution of our country?

Mr. Speaker, believing that this bill contains a most vicious principle, that its passage would do great injury to the cause of education, which it seeks to benefit, I stand here to oppose it and warn the House and country against it.

While I admit that the authority of the Federal Government is supreme over all the objects to which it extends under the Constitution, yet its jurisdiction is limited or confined to but few subjects, and those purely of a national character. And while I admit that Congress has power to levy, collect, and appropriate taxes for the purpose of carrying out and accomplishing the ends for which the Federal Government was created, yet I contend they have no power or authority whatever to levy or collect taxes or appropriate them for any of the purposes for which the State governments were created or which are within their exclusive jurisdiction, and over which the control of the United States does not extend. These propositions seem axiomatic when we consider the nature, character, and power, respectively, of the Federal and State governments. Nor indeed ought this to be a source of any regret, for it must be evident to us all that the national Legislature must know much less what the people of the States are willing to be taxed for and their ability to pay than the State Legislatures. Nor indeed will the attachment of the people to the Government be any less if the taxes required to maintain it relate to few objects and are small in amount.

A brief reference to our colonial history and the formation of the Union will throw much light upon the subject now under consideration. In the early colonization and settlement of this country the people separated far apart and formed themselves into distinct political communities. Each of them was wholly independent of the other and lived under its own charter, or adopted its own constitution or form of civil government. They made their own laws, established their own courts, and selected their own rulers. They levied taxes, collected and disbursed them. They regulated all their internal and domestic affairs.

The descent of property, the marriage relation, and everything affecting their lives, liberty, and happiness were governed by laws and ordinances established by themselves.

They regarded the regulation of their internal affairs in their own way as the very essence of liberty, and any interference with it as an invasion of their most sacred rights.

From the beginning they established and maintained public schools, provided for their support by public taxation. As early as 1621 Virginia established free schools, and it is believed extended their benefits even to the Indians. Similar schools were established in Boston as early as 1635, and the General Court of Massachusetts in 1647, in a law providing for grammar schools, declared in its preamble that they did so "to the end that learning may not be buried in the graves of our forefathers in church and in commonwealth."

And we are told by the historian (see Capen's History of Democracy, volume 1, page 132) that the colonies continued their legislation and maintenance of public schools with unabated interest down to the time of the Revolution. And let me state here an important and interesting fact: England, from whom our institutions and laws are in most part derived, never established or maintained public schools or institutions of learning, but left them to be provided by the Church or individual

or associated effort, and even the ability of Lord Brougham was not great enough to induce the government to change its policy in this particular. By the time of the Revolutionary war these colonies had grown and become great and prosperous States, making war and peace with the Indians, leagues and confederations with each other, and exercised all the powers and functions of sovereign political communities. And indeed we find them in the Declaration of Independence declaring themselves to be free and independent States. And a little later, in 1778, we find them in the Articles of Confederation styling themselves "The United States of America."

And now, Mr. Speaker, when these political communities, colonies, or States, or the people of which they were composed, ordained and established the Constitution of the United States, and established that great and good Government of which we are citizens, they did not surrender to it any power or control over any of the internal or domestic affairs of the States—no power to make any laws regulating the marriage relation, the descent of property, or anything appertaining to the local affairs of the States. They did not surrender to the Federal Government any power or control over their schools, nor did they commit any of the affairs of education or religion to the keeping of the Federal Government. Indeed, the objects for which the Union was formed were entirely different. It was established in order that the people of the several States might be able to preserve peace and tranquillity among themselves, and that they might be the better able to defend themselves against foreign powers, or, as it is better expressed in the preamble of the Constitution, "In order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." * * *

In the light of these facts and of the history of the country as we all understand it, let us look at the Constitution and see what authority, if any, the Federal Government has over the subject of education within the several States, and what power we as a Congress have to appropriate money to maintain such schools. It is admitted upon all hands and by all parties that the Federal Government is one of delegated, limited, and enumerated powers, all of which are to be found in the Constitution of the United States, or, as it is expressed by the Supreme Court of the United States in the case of The United States vs. Cruikshank (2 Otto, page 551):

> The Government of the United States is one of delegated powers alone. Its authority is defined and limited by the Constitution. All powers not granted to it by that instrument are reserved to the States or to the people.

In order that I may enforce this proposition, let me quote what has been said upon this subject by some of the men who framed the Constitution of the United States.

In the forty-fifth number of the Federalist James Madison says:

> The powers delegated to the Federal Government are few and defined. Those which are to remain to the State governments are numerous and indefinite. The former will be exercised principally on external objects, as war, peace, negotiations, and foreign commerce, with which last the power of taxation will be for the most part concerned. The powers reserved to the several States will extend to all the objects which in the ordinary course of affairs concern the lives, liberty, and property of the people, and the internal order, improvement, and property of the State.

No language could better than this outline those matters over which the Federal Government has jurisdiction and indicate the great mass or residuum of powers reserved by the States.

Let me also refer to the language of Alexander Hamilton, in the eighty-third number of the Federalist, in which he says:

> The plan of the convention declares that the powers of Congress, or, in other words, the national Legislature, shall extend to certain enumerated cases. This specification of particulars evidently excludes all pretensions to a general legislative authority, because an affirmative grant of special powers would be absurd as well as useless if a general authority was intended.

And in the eighty-second number of the Federalist Hamilton further said:

> The States will retain all pre-existing authorities which may not be exclusively delegated to the Federal head.

Or, putting it in even stronger language in the thirty-second number of the Federalist, he said:

> As the plan of the convention aims only at a partial union or consolidation, the State governments would clearly retain all the rights of sovereignty which they before had, and which were not by that act (the Constitution) exclusively delegated to the United States.

And, still further, in the same article Hamilton said:

> The necessity of a concurrent jurisdiction in certain cases results from the division of the sovereign power, and the rule that all authorities of which the States are not explicitly divested in favor of the Union remain with them in full vigor is not only a theoretical consequence of that division, but is clearly admitted by the whole tenor of the instrument which contains the articles of the proposed Constitution. We there find that notwithstanding the affirmative grants of general authorities there has been the most pointed care in those cases where it was deemed improper that the like authorities should reside in the States to insert negative clauses prohibiting the exercise of them by the States. The tenth section of the first article consists altogether of such provisions. This circumstance is a clear indication of the sense of the convention, and furnishes a rule of interpretation out of the body of the act which justifies the position I have advanced and refutes every hypothesis to the contrary.

It granted in one instance an authority to the Union and in another prohibited the States from exercising the like authority.

Nobody would have the hardihood to contend that the power was included in this definition, because no authority on this subject was granted in the Constitution to the Union or denied to the States.

Third. And where it granted an authority to the Union to which a similar authority in the States would be absolutely and totally contradictory and repugnant.

And surely no gentlemen will have the courage to claim that the United States have such an extensive authority over the subject of schools that any exercise of power by the States to establish and maintain schools would conflict with it. In other words, that the power exists in the Federal and not the State Government.

Alexander Hamilton, in the eighty-third number of the Federalist, said:

> The plan of the convention declares that the power of Congress, or, in other words, the national Legislature, shall extend to certain enumerated cases. This specification of particulars evidently excludes all pretensions to a general legislative authority, because an affirmative grant of special powers would be absurd, as well as useless, if a general authority was intended.

In the thirty-second number of the Federalist Alexander Hamilton said that the State governments clearly retained all these rights of sovereignty which they had before the adoption of the Constitution of the United States and which were not by that Constitution exclusively delegated to the Union. The alienation of State power or sovereignty would only exist in three cases: Where the Constitution in express terms granted an exclusive authority to the Union; where it granted in one instance an authority to the Union and in another prohibited the States from exercising the like authority; and where it granted an authority to the Union to which a similar authority in the States would be absolutely and totally contradictory and repugnant. (1 Kent, p. 388.)

Now, I might well rest the argument on this statement by Alexander Hamilton, who is regarded by all as one who not only believed in a strong government, but he never failed to claim for the United States all the authority they had. He says that the alienation of State authority exists only in three cases:

First. Where the Constitution in express terms granted an exclusive authority to the Union. Well, no one will claim that Congress granted in express terms an exclusive authority over education or schools to the United States, when the subject is not even mentioned.

And now, having before us a clear and full view of the objects for which the Government of the United States was established, let us see what power is conferred upon the Government of the United States and upon Congress over the public or other schools of the States. It is contended, Mr. Speaker, that there are two clauses of the Constitution which confer upon Congress the power to pass this bill and appropriate the money provided for by it to the purposes mentioned in it.

And let me repeat here, that it is not incumbent on me to show that Congress have not such power, but the burden or necessity of showing that they have rests with those who support this bill and favor it on this floor; and this position becomes so much the stronger when we consider that this power has never been exercised by the Government or claimed by it.

The first clause of the Constitution, upon which this power is predicated, is in these words (article 1, section 8):

> The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States.

Now it is claimed that inasmuch as the education of the people would make them better qualified to discharge their duties as voters and citizens, Congress may under this clause pass this bill, as being for the general welfare of the United States.

To put the proposition contended for by the advocates of this bill in the form of a syllogism, they would state it as follows: "Congress has power to lay and collect taxes and appropriate them to such purposes as will in their judgment promote the general welfare. The support and maintenance of the public schools in the States is in the judgment of Congress a proper means for the promotion of the general welfare; therefore Congress has power to levy and collect taxes and appropriate them to the support and maintenance of the public schools in the States."

This clause of the Constitution has given rise to more discussion than perhaps any other. It has received at the hands of public men three very different constructions:

First. That the power given by it is unlimited, and that the words "to pay the debts and provide for the common defense and general welfare" are a substantive and independent power.

Second. That the power to lay and collect taxes is not a general or unlimited anthority, but is qualified and restricted by the words of the clause itself, so that it amounts to a power to lay and collect taxes in order or for the purpose of paying the debts and providing "for the common defense and general welfare of the United States."

Third. That the power to lay and collect taxes is restricted to such specific objects as are contained in the other enumerated powers. (See Story on the Constitution, volume 1, pages 688, 689, 690.)

I contend that the second construction above stated is correct, and the one maintained by our best writers upon the Constitution, by the most distinguished of our statesmen, and by the words and spirit of the Constitution itself. In order to maintain the constitutionality of

this bill its advocates are logically driven to maintain the first of these modes of construction; that is, to claim that this clause confers a power to lay and collect taxes, and also the additional power to provide for the common defense and general welfare.

If this were so, then there would be no limitation whatever on the power of taxation or the extent or objects of it or the purposes to which the taxes might be appropriated; the whole matter would rest in the discretion of Congress, a discretion which would be uncontrolled by the limitations of the Constitution, and over which the Supreme Court itself would have no power to pass. Such a construction would enable Congress to determine what was necessary for the general welfare, and having done so, to levy and collect any and all taxes necessary to provide therefor, without any reference as to whether the purpose was national or local in its character.

In order that I may show that this construction is not maintainable, and that the one for which I contend is correct, namely, that the power of taxation conferred by this clause is not unlimited, but restricted by the very words of the clause itself, I will quote what has been said upon this subject by eminent jurists and statesmen.

Story on the Constitution, page 640, says that the construction given above is "the generally received sense of the nation and seems supported by reasoning at once solid and impregnable;" and on page 641 he says, "in this sense Congress has not an unlimited power of taxation, but is limited by specific objects—the payment of the public debt and providing for the common defense and general welfare." "A tax therefore laid by Congress for neither of these objects would be unconstitutional as an excess of its legislative authority."

Mr. President Jefferson expressed his view in the most emphatic and concise language as follows:

> To lay taxes to provide for the general welfare of the United States is to lay taxes for the purpose of providing for the general welfare. For the laying of the taxes is the power, and the general welfare the purpose for which the power is to be exercised. Congress are not to lay taxes *ad libitum* for any purpose they please, but only to pay the debts or provide for the welfare of the Union. In like manner they are not to do anything they please to provide for the general welfare, but only to lay taxes for that purpose.
>
> To consider the latter phrase not as describing the purpose of the first, but as giving a distinct and independent power to do any act they please which might be for the good of the Union, would render all the preceding enumerations of power completely useless. It would reduce the whole instrument to a single phrase, that of instituting a Congress with power to do whatever would be for the good of the United States; and as they would be the sole judges of the good or evil, it would also be a power to do whatever evil they pleased."—*Jefferson's opinion on the Bank of the United States, February* 15, 1791; 4 *Jefferson's Correspondence*, page 524, 525.)

Indeed the same opinion is maintained by Alexander Hamilton, James Madison, and many others.

And now, Mr. Speaker, having settled the proper construction of this clause, we now come to consider what is the "general welfare," and what is its meaning in this clause, "to pay the debts and provide for the common defense and general welfare" of the United States.

I contend that these words must all be taken together, and that the debts which are to be paid and "the common defense and general welfare" which are to be provided for are not those of any State, nor of the people, but of the United States as a civil corporation, government, or body-politic. When we remember that the convention which framed the Constitution had under consideration the expediency of the United States assuming the debts of the several States, we know beyond question that when they provided for the debts of the United States they meant it in the sense I have stated—of a government. And when they provided that taxes should be collected for the purpose of providing for "the common defense," they meant it in the same sense—that is, the defense of the United States in their collective governmental capacity.

If, then, the words "debts and common defense" mean the "debts and common defense" of the United States as a civil government, are not the words "general welfare" to be taken in exactly the same sense? And do not these words therefore mean the general welfare of the United States?—not as meaning the people of the United States or the individual citizens, but of the United States as a civil corporation and as a government, the same whose debts were to be provided for and whose defense was to be maintained.

And in order that there may be no doubt left upon the mind of any man upon this subject, let me refer to the other paragraphs or clauses of this section in which the words "United States" are used. The second paragraph of the same section says, Congress shall have power "to borrow money on the credit of the United States;" the seventh, that they shall have power "to provide for the punishment of counterfeiting the securities and current coin of the United States." Will any man contend that these words do not mean the United States as a government or civil corporation?

Again, in the sixteenth clause of the same section, where Congress is authorized to arm and govern the militia while in the service of the United States, we find these words used in the same sense. And in the seventeenth clause or paragraph of said section we find the very words used, "Government of the United States."

I have not time, Mr. Speaker, to make a more extended observation of the use of the same words in the Constitution, but you will find these same words, "the United States," used more than forty times in that instrument, and in nearly every instance in the sense in which I have given them. To my mind this argument is conclusive; but if it is not, it must go far toward establishing the proposition for which I now propose to contend, and that is, that the words "general welfare" refer to matters of a general and not a special character; national and not local; of the United States, and not of the several States or the people thereof; and hence that education is not a purpose or object for which taxes can be levied or appropriated under this clause of the Constitution.

On this general subject Story, in his Commentaries on the Constitution, on page 650, says: "If the defense proposed by a tax be not the common defense of the United States; if the welfare be not general, but special or local as contradistinguished from national, it is not within the scope of the Constitution."

President Monroe used almost identically the same language, and declared that the power to raise and appropriate money under this clause was "restricted by the duty to appropriate it to purposes of common defense and of general—not local, national not State—benefit." Alexander Hamilton, in the forty-fifth number of the Federalist, said:

> The powers reserved to the several States will extend to all the objects which in the ordinary course of affairs concern the lives, liberty, and property of the people, and the internal order, improvement, and property of the State.

And in the thirty-second number of the Federalist he said that—

> The State governments should clearly retain all the rights of sovereignty which they before had, and which were not by that act (the Constitution) exclusively delegated to the United States.

James Madison, one of the framers of the Constitution, in considering this clause, said:

> If Congress employ money indefinitely to the general welfare, they may take the care of religion into their own hands. They may appoint teachers in every State, county, and parish, and pay them out of their public Treasury; they may take into their own hands the education of children, establishing in like manner schools throughout the Union; they may assume the provisions for the poor; they may undertake the regulation of all roads other than post-roads; in short, everything, from the highest object of State legislation down to the most minute object of police, would be thrown under the power of Congress; for every object I have mentioned would admit the application of money, and might be called, if Congress pleased, "provisions for the general welfare."—*Madison's speech on the codfishery bill in* 1792.

It is in vain, after this unequivocal protest of Madison against the extensive powers claimed for the Federal Legislature, for gentlemen to pretend in this House that Madison believed in the existence of any power in the Federal Government over the subject of education in the States. This quotation from Mr. Madison is an admirable statement of those matters or subjects over which he declared the Federal Congress had no authority or jurisdiction. Gentlemen will do well to read, ponder, and consider these words of this great expounder of the Constitution.

But we are told that Congress has power to pass this bill under the second paragraph of section 3 of the fourth article of the Constitution, and which is in the following words:

> The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State.

And it is claimed that Congress has under this clause made large donations of public lands to the States for educational purposes.

A bill providing for a donation or grant of lands does involve the power of Congress over the territories or public lands of the United States, but the bill now under consideration makes no reference whatever to public lands or territories, nor does it make a distribution of their proceeds. This is not a gift of lands held for the benefit of all the States, but a gift of money out of the Treasury, raised by taxation of the people. Lands may be donated or given without resorting to the power of taxation; but this bill is based upon the assertion of the right to levy and collect taxes from the people of the United States to maintain schools in the several States—not upon the principle of donating lands. Authority may be found in precedent for the latter, but none can be found in the hundred years of our existence as a nation for the former.

If the power to pass this bill is to be found in the Constitution it must be found in some other clause, for it might readily be that the territorial domain of the United States might be consumed in the erection of new States or otherwise disposed of by Congress, and then the power contended for, if only referable to this clause, would end, and thus a great power of the Constitution cease by the mere failure of the Government to own public lands. If this power exists, it is a vast power, of the greatest significance, to be found in some express power of the Constitution or to be easily and readily implied therefrom, and not be found lurking and sneaking in some crevice of the Constitution or concealed and hidden in some unintelligible way in some phrase having relation to a wholly different subject.

If it had been the intention of the framers of the Constitution that the States should surrender their jurisdiction over the subject of education and that this power should be conferred on the Federal Government, it would have been a simple thing to have said so in the Constitution and to have enumerated it among the many powers specifically mentioned therein. And indeed, if it had been intended that the United States should have jurisdiction over this subject, either exclusive or

concurrent with the several States, is it not strange, more than strange, that not one word occurred on the subject in the constitutional convention which framed the Constitution; that the subject is not even mentioned in the Federalist as one of the powers of the new government about to be created by the Constitution? And, as suggested, is it not passing strange that this power has never been claimed heretofore for Congress?

It is said by its advocates that Congress has power under the Constitution to make acquisition of territory and appropriate the public moneys to pay for it, and that they then have a right to donate or grant it to the States for educational purposes. And we are asked, if Congress can do this, why can it not appropriate money directly for educational purposes in the States.

This plausible but specious proposition will not deceive any person who examines it. One fallacy in it is in the false assumption that Congress had the power to purchase territory for public lands. Congress has never had such power, and has never claimed it. The United States may acquire territory by cession, or in the exercise of the power to make war and treaties, and it has never acquired any territory in any other way, and the assent of Congress is not required in either case.

Examine every deed of cession made by the several States, and they are all made to the United States, not to Congress; to the Government, not to one of the Departments. Examine with care into the mode by which we acquired all our foreign territory, from the purchase of Louisiana in 1803 to that of Alaska in 1867, and you will find that it was all obtained by treaties made by the President of the United States, by and with the consent of the Senate, and by virtue of the treaty-making power. But it is said that Congress appropriated the money to pay for it. Certainly. The United States in its sovereign capacity, acting by and through the President and Senate, first entered into a treaty by which it was to acquire territory, and agreed to pay, in whole or in part, a money consideration for it, and incurred a liability for the amount which they agreed to pay. All this was done, and properly done, without the consent of Congress.

Congress could not have done this; it could not have acquired this territory nor contract a liability for it. If it could, the power to make treaties would be taken away from the President and Senate. As the amount which the United States agreed to pay became a debt owing by our Government, the duty to pay it was absolute, and Congress acted in appropriating money to pay this debt simply as they did in regard to any other debt. Hence I say that it is a false assumption to claim that Congress can purchase public territory.

Mr. Speaker, the public lands do not belong to Congress, but to the United States. The only power that Congress has over them is that given by the section and article of the Constitution above quoted. I might go further and claim that when Congress has disposed of these lands and the proceeds have been paid into the public Treasury of the United States the power of Congress over it under the article and clause above quoted has wholly ceased and ended, and that thereafter the power to use or appropriate these moneys must be derived, if at all, from that clause of the Constitution which enables them to provide for the common defense and general welfare.

Real estate and money are wholly different things, whether owned by a sovereign government or by an individual. Land may be converted into personal property by deed or will by the mere intention of the party making the instrument, and certainly there can be no reason why the territorial domain of the United States shall be considered subject to the same disposition as the money of the United States, or *vice versa*.

I regard the argument that if Congress can appropriate money to buy public lands and may then donate the lands to school purposes it could appropriate the money direct as a mere begging of the question. Sir William Hamilton says that Plato in his Phædo demonstrates the immortality of the soul from its simplicity, and in the republic he demonstrates its simplicity from its immortality. So here the advocates of this measure argue that Congress has power to appropriate money for educational purposes in the States from its power to purchase public lands, and argue its power to purchase public lands from its power to donate lands or money to the States for educational purposes.

Indeed, Mr. Speaker, every nation or state which owns public lands and which has the power to acquire them must have a power to dispose of them, and with us this power is found in that clause of the Constitution above quoted, and under which grants and donations have been made for educational and other purposes. The view that I have taken of this matter will be found to be confirmed in the commentaries of the great jurists of this country. Chancellor Kent said:

> The title—
>
> To the public territory—
>
> is in the United States by the treaty of peace with Great Britain, and by subsequent cessions from France and Spain, and by cessions from the individual States.

The learned chancellor here uses the word "cessions" in the sense of treaties.

Judge Story says that "the power of Congress over the public territory is clearly exclusive and universal." And speaking further upon this subject he says:

> The public lands hold out after the discharge of the national debt to be devoted to the cause of education and sound learning and to internal improvements without trenching upon the property or embarrassing the pursuits of the people by burdensome taxation. The constitutional objection to the appropriation of the other revenues of the Government to such objects has not been supposed to apply to the appropriation of the proceeds of the public lands.

These two paragraphs ought to be burned into the memory of the advocates of this bill. It is a clear and broad declaration that the powers of Congress over the public lands and over the money in the Treasury of the United States is wholly different; that while there is power to appropriate the proceeds to the public lands to educational purposes, there is a "constitutional objection" to appropriating the other revenues of the Government to such purposes. And, Mr. Speaker, while President Jefferson, in his message to Congress in December, 1806, strongly urged upon Congress the establishment of a national institution of learning, he declared that even for this purpose "the Constitution would have to be amended with the consent of the States, because this object is not among those enumerated in the Constitution and to which it permits the public moneys to be applied." There are, however, many other serious objections to the bill.

This bill provides for an appropriation of money in such a way as to give to one State an unjust advantage over other States; and it makes this inequality an argument in support of the measure.

The money which is raised by taxation in this country is held by the Federal Government in trust for the people of the United States. No one State and no one individual is entitled to any more of it than another.

In 1836, when the United States found itself in possession of a surplus in the Treasury, it ordered it distributed among the several States upon the basis of population, which is the only fair or equitable mode in which it can be appropriated.

This bill, however, makes the distribution upon an arbitrary basis, in order that it may give to the Southern States a much larger share than they are entitled to. Knowing the strong constitutional objections which the Southern States have always had to the exercise of doubtful constitutional powers and their hostility to Federal interference with the domestic institutions of the States, the friends of this bill have made this inequality as great as possible, and have made the amount so large that they hope that self-interest will overcome all constitutional scruples. The temptation is indeed very great. Our first parents in their desire to know the tree of good and evil were not able to resist the persuasive arguments which were held out to them. They yielded to the subtle adversary. They tasted the forbidden fruit.

> Earth felt the wound, and nature from her seat
> Sighing through all her works, gave signs of woe
> That all was lost.

In order that the people of this country may understand this inequality, I propose to make it clear and let it go before the country, so that the people may know how unjust and unequal is this distribution of their money. Alabama, with a population of 1,262,505, gets $3,820,472.70, while New Jersey, with a population of 1,131,116, receives $469,345.25. Arkansas, with a population of 802,525, receives $1,780,592.77, while California, with a population of 864,094, receives only $470,940.58. Louisiana, with a population of 939,946, receives $2,806,252.79, while Kansas, with a population of 996,096, gets only $347,947.77.

My own State of Ohio, with a population of 3,198,062, gets but $1,162,120.91, or about the same as Maryland gets, with a population of 934,943. The great State of New York, with a population of 5,082,871, gets $1,935,589.98, while the State of South Carolina, with a population of 995,577, less than one-fifth that of New York, receives, $3,259,899, and Kentucky, with a population of 1,648,690, gets $3,070,783.54, while Iowa, with a population of 1,624,615, receives but $410,819.31. Georgia, with a population of 1,542,180, receives $4,587,029.97, while Indiana, with a population of 1,978,301, much larger than Georgia, gets $976,265.18. Connecticut, with a population of 622,700, gets $250,533.74, while Florida, with a population of 269,403, less than one-half, gets $706,795.99. Illinois, with a population of 3,077,871, gets $1,281,552.64, while Georgia, with a population of 1,542,180, gets $4,587,029.97. So on to the end of the chapter.

Mr. Speaker, I speak as one of the Representatives of Ohio in this body when I say that I do not believe the passage of this bill will be beneficial to the people of my State. It imposes heavy taxes upon them for the benefit of people of other States. It takes from us more than $2,000,000, for which we get no return. Worse than this, it establishes a principle which endangers the existence of our common schools. On this subject Ohio is jealous of her rights, and claims exclusive and unlimited jurisdiction. She desires no partnership with the Federal Government in regard to the support of her schools. She denies the power of the Congress of the United States to tax her people one dollar for any purpose of this kind, and would resist to the utmost of her power any attempt of the Federal Government to interfere in any way with her system of common schools.

Mr. Speaker, the State of Ohio does not ask the Federal Government to give her any aid toward the education of her people. We have great reason to be proud of what our people have done in the cause of popular education. We have sixty colleges and seminaries of learning within the borders of our State; more than $24,000,000 is invested in school-houses and grounds; we have more than 10,000 school-houses;

we employ 24,000 teachers, and are in this particular the second State in the Union; we have 755,000 children enrolled in our schools, and more than 50,000 of our citizens are connected with the control, direction, and management of our common schools, and our people pay voluntarily and cheerfully more than $8,000,000 a year for their support and maintenance. And if the Federal Government will keep its hands off we will build more school-houses and enlarge the facilities for education until we have gathered every child in the State into our schools, and will endeavor to make Ohio stand first among all the States in her educational institutions. But if we are compelled to aid in the support of the schools in other States, if our people learn to be dependent upon the Federal Government for their support, then I bid farewell to the prosperity of our public schools. But, sir, there is another feature of this bill which exposes the injustice of the principle upon which this distribution is made.

The bill proposes to distribute the money upon the basis of illiteracy and to educate the illiterate. If this is so, the money so appropriated ought to go to the illiterate persons, and so that each illiterate person, whether living in one State or another, should get as much as another illiterate person. If it is intended for the benefit of the ignorant, the ignorant ought to get it; and an ignorant or illiterate person in Ohio ought to receive as much as an illiterate person in South Carolina.

By this bill, however, the money is appropriated to the States and not to the illiterate persons in the States. It is given to the several States in proportion or upon the basis of the number of its illiterate persons, but it is not appropriated for or to the exclusive benefit of the illiterates. It is given or obtained upon a theory of benevolence to the illiterate, but it is not to be used for the sole purpose of benevolence to the unlettered.

In order that I may make this perfectly plain let me illustrate or show the practical workings of this bill.

This bill appropriates fifty-five millions of money. Ten millions are distributed the first year. Now, let us see how much of this will go to the illiterate persons. I will take two States and show the result.

Ohio has a population of 3,198,062. Now, the number of persons of the school age—between 6 and 21—is 1,063,337, and the share of the $10,000,000 coming to Ohio is $211,294.71, which, if divided among all persons of school age, would give us about 25 cents per capita. Now, the number of illiterate persons in Ohio within the school age is about one-third, say, of all the illiterates in the State, and as the whole number is only 131,000, only about 43,000 illiterate persons share in this fund, and hence only about $16,000 goes to the education of the illiterates of Ohio out of $10,000,000. Now, I will take a Southern State which has a large colored population, hence a large illiterate population; and let us see what amount of the $10,000,000 goes to the illiterates of that State.

Alabama has a population of 1,262,505. Her school population is 422,739, or about one-third of her entire population. This State gets of the $10,000,000 paid under this bill the first year $694,631.40. This does not go merely to the illiterates, but to all alike. Now, the whole number of illiterates within the school age in that State is about one-third of the whole number within the school age, or, say, 140,000, so that the total amount which goes in that State out of the $10,000,000 to the illiterates is about $200,000, or about $1.50 apiece.

It is said that the voters in the Southern States are ignorant, and that they are to be educated by this money. Indeed! These voters are all over 21 years of age now, and not one dollar of this money will go to them. It is now nearly twenty-one years since the emancipation proclamation, and I think it safe to say that no negro freed by the war will ever get any of this money. So far as it goes to any of the negro race, it will go to those who were born since the war. I do not believe that the amount of this money will practically be of any benefit.

The friends of this bill have painted a dark and gloomy picture, in which they seem to attribute all the vices and crimes of mankind to the ignorant and the uneducated.

In my judgment crime and wickedness can much more properly be attributed to the rich and the educated than the ignorant and poor.

It may be true that minor offenses, misdemeanors and breaches of police regulations, can often in our great cities be traced to our illiterate poor; but, sir, the great crimes which demoralize our business communities is chargeable at the doors of the rich and educated.

Mr. Chairman, I resent the imputation. The poor and the ignorant are docile and obedient to the law, and it bears harshly and heavily upon them; but wickedness has its seat in high places, and the wrongs and crimes which demoralize society will be found among those who ought to be at once the exemplars of public morality and the guardians of public justice.

> Can wealth give happiness? Look round and see—
> What gay distress! what splendid misery!

Or, as Shakespeare says—

> In the corrupted currents of this world
> Offense's gilded hand may shove by justice;
> And oft the wicked prize itself
> Buys out the law.

But it is said that our elections will become corrupt, and that the elective franchise will be debased, and the whole system of political elections become demoralized by illiterates voting.

Mr. Chairman, there would be some force in this observation if the ignorant governed the intelligent, or if the poor governed the rich. But the opposite will be true as long as "knowledge is power" and intelligence superior to brute force. Our elections in this country are nowhere controlled either by the poor or by the illiterate.

Intelligence makes our constitutions, our laws, manages business, regulates commerce, controls elections, and governs society. There is not a State in the Union, North or South, where ignorance or poverty ever has or ever will dominate or control the elections; and I defy any man in this country to show that the frauds perpetrated at the polls, the corruption of the voters, the degradation of the ballot, the false and fraudulent returns of elections, or the fraudulent ballots themselves, have ever been attributable to the ignorance or the poverty of the voter. On the contrary, every invention, every artifice, and every fraud of this kind can be traced to the men who control and manage elections and party politics.

Who invented and used the tissue ballot?

Who manufactured fraudulent naturalization papers?

Who makes criminal political assessments upon needy officials?

Who spends millions of dollars to carry our elections?

Who corrupted the returning boards of Florida and Louisiana to make fraudulent election returns?

Who influenced these returning boards to make these false returns?

Who agreed to appoint to political office every dishonest official who was connected with making false counts and fabricating false returns in order that the States of Florida and Louisiana might be despoiled of their electoral vote?

And who, sir, consummated beneath the dome of this Capitol that great and monumental crime when Hayes, the Republican candidate, was declared to be President, and Tilden, the choice of the people and of the Democratic party, was cheated and defrauded out of the great office to which the people had elected him?

None of these things can be charged to the poor, the ignorant, or the illiterate.

Mr. Speaker, I dislike the whole theory of this bill, and I trust that the majority of the Southern members of this House and the proud and chivalrous people whom they represent will regard this bill with the same feeling and mortification that I do.

The bill proposes benefits to them greater than to the people of the Northern States. It proposes that the public Treasury shall be opened, a distribution of a large amount of its money made, and that they shall get more than their share. It is a bill addressed to their cupidity and poverty. It is a proposition more tersely expressed by Shakespeare:

> Put money in thy purse: ay, put money in thy purse.

I know the difficulty in which the Southern members of this House are put in regard to this bill. Their constituents have been led to believe by the action of the Educational Bureau and by other instrumentalities interested in the appropriation of this money that it was within the power of Congress to make this disposition of the public moneys; that it was the duty of the Federal Government to give them this aid to their schools on account of their losses in the war; and they now demand the passage of this bill, and Federal emissaries all over the country are moving heaven and earth in favor of this measure.

It is said that the refusal of Southern members to vote for this bill will be regarded with disfavor by their constituents, who have considered only the benefits to be derived from it; indeed, that many of them will regard the action of members of Congress who refused "to bend the pregnant hinges of the knee that thrift may follow fawning" as unworthy of their support; that they will regard it as captious for members to refuse to receive millions of dollars to be had for the mere asking.

In my judgment, Mr. Chairman, it will require great courage, great bravery, and great manhood on the part of Southern members to vote against this most tempting and insidious bill; but, sir, I believe that this measure will be rejected by you with that spirit which has always characterized the Southern people. You can not vote for this measure without being willing to take more than your share of the public money and without voting it to yourselves. Nor can you favor the passage of this bill without violating the Constitution, to surrender those constitutional principles for which you and your fathers have fought for a hundred years for so much money as may be held thus. You yield up every safeguard that has been built up for the protection of the States against the encroachment of the Federal Government for a Government gratuity. Gentlemen of the South, you must choose between God and Mammon. Do not sell your birthright for a mess of pottage; do not let your people be deceived by the magnificence or apparent benevolence of this gift. Tell them it is the voice of the tempter; that while it is the voice of Jacob it is the hand of Esau. *Timeo Danaos et dona ferentes.*

Mr. Speaker, this bill will make all the States that receive the money mendicants and beggars, and you will find them holding up their hands to receive subsistence from the Federal Treasury. Their schools will be opened when the Federal Treasury is full, and closed when the Federal Treasury is empty; their teachers will be looking to the Federal Govern-

ment; it will engender a spirit of almstaking; it will create a habit of receiving gifts; it will create an appetite in the people of the States; if moneys can be spent for a purpose of this kind, they will have still heavier tariffs and worse taxation.

Another objection to this bill: It will break down the spirit of the Southern people; it will create in every State dependence upon the Federal Government. If the amount of money appropriated by this bill can be given—if Mr. BLAIR and Mr. WILLIS can court popularity by the passage of this bill, why will not the next man offer to give hundreds of millions?

I know, Mr. Speaker, that it is pretended that inasmuch as this bill provides that the money appropriated is to be disbursed by the State, and not by Federal officers, it is relieved from the charge of unconstitutionality. This clause was inserted in this bill not because its authors abandoned their claim that Congress had a right to pass it; indeed, the original author of this bill [Senator BLAIR] claimed that Congress had full power to pass the bill and appoint Federal officers to carry it into execution, and Senator SHERMAN in the Senate declared:

> If the United States have the right to appropriate the money they have the right to say upon what conditions the money shall be expended. If they say we will aid the South or the Southern States to educate their illiterate children, then the United States have the power and the right to set out the principles and conditions or limitations of that grant. The greater includes the less; and if the power is given to make these appropriations at all, the power is also given to say for whose benefit the money shall be expended, how it shall be expended, where and when and how apportioned, and for what purposes. That is as clear a proposition as can be shown in Euclid or any other mathematical work.

The change was made from Federal to State officials in order to make the bill acceptable to Southern members, who were unwilling to have their States overrun by any additional Federal office-holders or political evangelists in the form of New England school-teachers. The change was from allopathic to homeopathic treatment, and the pill was sugar-coated to please the palate of the sensitive patient.

The radical difficulty in this case is not one of form, but of substance. The principle involved goes back of any question of a distribution of the money. It goes to the substance of the entire transaction, and that is to the power of the Congress of the United States to employ a Federal power for a State purpose; in other words, to either levy or appropriate Federal taxes in aid of a State object, namely, the support of the educational systems of the State, and on this rock we stand.

If we give this bill our support we acquiesce in a construction of the Constitution against which we have fought from the organization of our political party, and if it passes we will have established a precedent, and, in the language of Disraeli, "have thereby embalmed a principle" fatal to our party, and one which in my judgment will enable the Federal Government to break down every barrier between it and the States, and which makes the Congress of the United States an absolute, unlimited despotism, governed only by its own uncontrolled and unbridled discretion.

But it is said this bill merely donates the money to the States; it does not interfere with the States at all. While I admit that this bill is a device and an attempted evasion of the Constitution, yet it does directly interfere with the State government.

1. It controls the money after it reaches the State. How? By a Federal officer? No; but by providing in the bill that no State shall receive its second installment until it has passed certain laws providing for the education of white and colored children without distinction of color. Here is a reward for making the school systems of a State as Congress wants it. Here is a penalty for not making them so.
2. The bill provides what the States shall and what they shall not do with the money.
3. And if any State appropriates the full installment as it pleases, such State shall have no more.
4. Nor shall any State have anything after the first installment, unless it shall make certain statistical reports to the Educational Bureau and become a sort of appendage to that department.
5. The money so paid shall be divided according to the number of white and colored children of the same school age.
6. Five per cent. and no more may be paid to teachers.
7. In case a State shall misapply or misappropriate any money received under the act, or fail to comply with the conditions and provisions thereof, the President may direct the Secretary of the Treasury to withhold any subsequent apportionment until the State shall have replaced or made good the amount misappropriated.

Strange language to apply to a State—if it shall misapply and misappropriate! And who is to decide this? The State? Oh, no; the President! And the State shall be compelled to obedience by withholding what is due it.

Mr. Speaker, if it is constitutional for Congress to impose these conditions, where is the limit to the conditions it can impose? If one condition is lawful, so is another. The control which Congress retains by the proviso as a condition of this bill shows the immense power retained. Sir, it enables the United States to mold these States as it pleases, to shape their local laws, to regulate their school systems, to give them money if they are obedient, and refuse if they are not. It makes the States mere dependencies of the Federal Government.

Mr. Speaker, let no man suppose for a moment that my opposition to this bill arises from any feeling of unkindness to the people of the Southern States, who would be mainly benefited by the passage of this bill, or by any unwillingness to treat them with generosity. God forbid! Every sentiment of my mind, every feeling of my heart, is in full sympathy with them, and no man in this House would go further to do them justice. I do not forget their sufferings, their sacrifices, in the long and bloody civil war. Neither do I fail to recognize how to-day they are as devoted, as loyal, and as true as we are to the Constitution and Union of the States. Neither let it be supposed that I am unfriendly to the cause of education. I indorse all that has been said and all that can be said in its favor. In one word, I regard it as the most important and interesting subject which can engage the attention of men or governments.

The freedom which we enjoy as American citizens was won by the sword and sanctified by the blood of our Revolutionary fathers.

Years before the Constitution was adopted or the Union formed, the State existed, and our forefathers enjoyed all the rights of life and belief and happiness which they did afterward, and the Union was formed to secure these rights for all time. The most sacred, the most important, and valuable rights of the citizen are not those which are not protected by the Federal but by the State government.

The whole life of the citizen is spent in connection with, and in obedience to the laws of the State, and he comes but little in contact with the National Government. Every right of life and liberty and property is immediately connected with the State government. It is the guardian which protects his family and all his social relations. Under its laws he feels secure in the day and in the night. Is he a citizen of the country? He knows that every blade of grass that grows and every seed which he plants will grow protected by some law of his State. Does he live in the city? He sees in the municipal government which protects him the strong arm of his State. Indeed, he feels that he is himself the State.

I trust that no man will misunderstand my position in regard to the Federal Government. I am not jealous of any of the powers conferred upon it by the Constitution. I would not abate one jot or one tittle from its authority. I do not believe that the Constitution confers upon it unnecessary powers. I cheerfully yield to it every power expressly conferred upon it and every implied power necessary to carry them out. I believe that it is a government having all the necessary powers to suppress domestic insurrection and internal disorder and to maintain itself against all foreign nations. But believing as I do that the liberties of the people, the rights of the States, and the perpetuity of the Union can only be maintained by a strict adherence to the Constitution, I have felt that it was my solemn duty to warn the House and the country against this most insidious and dangerous bill.

If the Federal and State Governments are kept within their respective orbits, we will have that which should be the dearest object of all patriots—"an indestructible union composed of indestructible States."

The Bonded Extension Bill.

SPEECH

OF

HON. JOHN WINANS,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. WINANS, of Wisconsin, said:

Mr. CHAIRMAN: I have listened to the debate on the bill under consideration with a good deal of interest, and especially to the speeches made by the friends of it, in the hope that I might be convinced of its merits, as I have some friends outside of Congress interested in its passage, and I would like to accommodate them by voting for it if I could do so without injury to the Government. But, sir, its friends have failed to convince me of its justice, and I must follow my convictions and vote against it. This I shall do, not because I may or may not believe the manufacture and use of spirituous liquors as a beverage to be a curse to the country; not because its manufacture and use are prohibited by some of the States, for as long as the National Government recognizes it as a legitimate industry by taxing it, such considerations have and should have no weight in the discussion.

I am opposed to it, sir, because I believe no good reason has been given or exists for the extension. If pecuniary embarrassments exist by reason of overproduction the fault is with the producers, and has been incurred knowingly, without the fault of the Government, and they must bear the consequences of their folly. I am unwilling, sir, to single out this one industry and grant to it, and those engaged in it, a

special privilege not accorded to other tax-payers and to other industries, and thereby designate this as the pet industry of our country.

There is a suspicion in the public mind that if this extension be granted others will again be asked for and given, and in the end that the tax due or soon to become due will be lost to the Treasury forever. And I must confess, sir, that I share in that suspicion, which has been strengthened by the statements of the distinguished gentleman from New York [Mr. HEWITT], made on yesterday in his advocacy of the bill; and I shall now vote against it without hesitation or reluctance. Several of the distinguished gentlemen who have addressed us on the subject have declared their willingness to vote for the entire abolition of the tax. Permit me in conclusion to say it is a tax I believe in, and the constituents I have the honor to represent believe in, and I neither want to see it abolished nor its payment jeopardized by the passage of this bill.

Bureau of Labor Statistics.

SPEECH

OF

HON. PETER V. DEUSTER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics

Mr. DEUSTER said:

Mr. CHAIRMAN: The state, in the present as in the past and for all future time, must look for its prosperity and for its greatness to the laboring classes, the skilled artisans of the land. The money-power, the golden aristocracy, is a creature of convenience as unsubstantial and as unreal as the fabric from which fancy weaves the visions of sleep. Capital itself is but a representative measurement of labor; the dollar in gold is only a dollar because it represents an equal amount of strength and toil expended in the factory, the field, or some other of the many pursuits of human activity. The brawny arm of the laborer is behind it all and is in the nature of things the only true standard of value. Vanderbilt with his hoarded millions, unaided by the strong arm of the workman and the farmer, could not keep the wolf from his own door. His wealth is but the aggregation of conventional values to which common consent has given a purchasing power.

The laborer contributes directly to national stability. He is the Atlas upon whose shoulders rests the civilized world. Advance the interests of labor and you advance the state; degrade the former, and the latter goes down with it.

A government of the people, by the people, and for the people ought therefore to regulate its legislative machinery so as to recognize this largest factor in the prosperity of the state.

There is a war between capital and labor, and the legislative power of the Government has been called in as arbiter and peacemaker. To act, however, impartially on this appeal, the arbiter must obtain possession of the facts, and to this end a bureau of labor statistics becomes a necessity.

The controversy between capital and labor is a momentous one, and its end can not be predicted. But it must inevitably lead to tragic results if the causes which maintain and nourish it are not soon remedied on the basis of justice and equity. The workmen have many and strong grievances against capital, and the nature and justice of these has certainly been well exposed through a recent and gigantic strike.

Last summer the commercial interests of the nation were paralyzed by a strike of the telegraph operators, who set up a claim that they were not remunerated in proportion to the services required of them. The sympathy of the country and of business men who were losing large sums by the embargo which this strike placed upon their business followed the action of the operators, and no words of condemnation were heard. But the great corporation against which the strike was directed, the Western Union Telegraph Company, stood unmoved, and in resisting the demands of its employés it merely alleged that it could not afford to pay an increased rate of wages.

Whether, however, this allegation was justifiable or not I care not to say. I rather wish that it be judged by the contemporaneous history of the company which uttered it; that it be judged in the light of an event which transpired a short time prior to the strike. And this event is embodied in the fact that a few weeks before the inauguration of the strike in question the Western Union Telegraph Company, with an already inflated capital, represented by, I think, $55,000,000, swallowed up its rival, the Mutual Union Telegraph Company, with a nominal capital of $10,000,000, and obtained thereby a monopoly of the telegraph over the greater portion of the United States—a monopoly so valuable that it prompted immediately the board of directors of this same company to increase, without the addition of a single dollar of real property, its capital stock to $80,000,000.

An immensely wealthy corporation watered thus its stock to the extent of $15,000,000, and in order to make it marketable it guaranteed dividends out of that portion of its gross earnings which should have fallen as compensation to its employés. Its managers might with truth say that they could not afford to pay the wages demanded of them, if these wages were to be computed on the basis of an $80,000,000 investment, which was actually about four times in excess of the original and real investment.

Viewed in the right light, we have here an instance of grand larceny practiced by a greedy corporation upon its own employés; for by watering its stock to an extent of $15,000,000 the Western Union Telegraph Company was bound to withhold from the wages of its employés a large percentage of the money necessary for the payment of the interest of this heavy sum.

No human power could probably in this instance have successfully interfered as arbiter between the telegraph company and its employés, so stubbornly was that company bent upon a victory in the struggle. Yet it is this very stubbornness and power of corporations that calls for the establishment of a bureau which shall be possessed of the right of collecting figures and facts tending to an adjustment and to a solution of the disputes of capital and labor, and which shall at the same time be authorized to advise Congress from time to time of the necessity of remedial legislation.

And as in the case of the Western Union Telegraph Company, there are likewise railroads which carry on their stock-books valuations of double and triple the amount of the real investments as dead weights to keep down the laborer and to increase the wealth of the capitalist; and the same is true of nearly all the great corporations in the country. Fostered by legal enactments which exclude the competition of foreign nations, our corporate enterprises became first arrogant and exacting, then tyrannical, and lastly brutal. And in speaking of their brutality I use the term advisedly, for no other will do justice to the condition to which the workman has been reduced by his hard taskmasters.

For years, yea, from the foundation of the Government, it has been the whole aim of our legislation to build up and foster great manufacturing industries. Tariffs not for revenue, but to clear the home markets of foreign competitors, have been enacted into laws; Government consuls at foreign ports and cities have been instructed to report to the State Department where American products and manufactures could be sold to advantage, and by the aid of governmental machinery the American capitalist has been enabled to reap a golden harvest. The scriptural text, "To him that hath shall be given, and from him that hath not shall be taken away even that which he hath," has been the corner-stone of all the economic enactments which pertain to the first century of our legislative history. On the other hand, labor has been left alone to battle single-handed not only with the competition incident to foreign immigration, aided and encouraged by the State, but also with the inventive genius of the age, which has produced all sorts of labor-saving machinery that is driving thousands from trades in the acquirement of a knowledge of which they spent the best years of their lives.

The pending bill, Mr. Chairman, involves a social problem which must claim the attention of the capitalist as well as of the legislator. Self-preservation is the first law of nature, and the right of revolution only needs to be crowned with success to transform the participants from rebels to patriots. The lurid glare that illumined the sky above Pittsburgh in 1877 is but a foretaste of what may be expected unless a halt is called in the greedy struggle for wealth. The music of the loom, the spindle, and the forge must have other accompaniment than the low sad wail of the starving wife and children, or an avenging Nemesis will rise up and lead the down-trodden sons of toil to an uprising before which the world will stand appalled. Theirs is no mob led on by ignorance and fancied wrong. No; theirs is an organized body of intelligent men, slow in its anger, but terrible in its vengeance when its indignation is once aroused.

The workmen demand that the Government shall take cognizance of their condition and that it shall adopt measures for an amelioration of their wrongs. Their national, State, and local organizations have asked for the passage of the pending bill, and simple justice demands that their wishes be complied with. They are willing to submit their grievances for arbitrament upon the testimony which a bureau of labor statistics will have to offer relative to their case. And until this is done they should in no wise be outlawed by State enactments for banding together to resist the encroachments of capital, nor should they be rendered amenable to so-called "conspiracy laws" when they refuse to respond to the dictates of their masters.

The machinery of the Government, operated in the past for the purpose of helping capital to successful investments, should now be employed, to some extent at least, in pointing out to labor fields of remunerative employment. The object sought to be attained by the pending bill is beneficial alike to capital and labor. It will, it may be hoped, relieve capital from the menace of forced idleness on the part of the laboring classes by directing them to new fields of labor, and it will also expose every injustice which may be practiced by capital upon

labor or by labor upon capital, and it will pave the way for reciprocity between them. Knowledge is power, and with an exposé by a bureau of labor statistics of all the facts which bear on the true and actual relations of labor and capital a new era in our economic history will likely be inaugurated, an era in which the employer and the workman will do each other justice to the best of their ability. The suspicions which now exist between labor and capital will then be removed, and each will strive to advance the interests of the other. But if such a result be desirable, let the Government above all inform itself now of the exact nature of their differences.

Consular and Diplomatic Service—The Commission to the South and Central American States.

SPEECH

OF

HON. THOMAS P. OCHILTREE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 5, 1884,

On the following amendment offered to the bill (H. R. 6770) making appropriations for the consular and diplomatic service:

"For three commissioners, to be appointed by the President, by and with the advice and consent of the Senate, at a compensation of $7,500 each. Said commissioners shall ascertain the best modes of securing more intimate international and commercial relations between the United States and the several countries of Central and South America, and for that purpose they shall visit such countries in Central and South America as the President may direct."

Mr. OCHILTREE said:

Mr. SPEAKER: I desire to make a few remarks in regard to the Senate amendment for the proposed commission to the Central and South American states provided for therein. I believe that the time has come for more intimate commercial and international relations between those countries and our own. I, therefore, favor the pending measure, that is intended to be the means of securing these relations; or at least of bringing us such information as will lead to more intimate commercial and international relations with our tropical and transtropical neighbors.

We have too long neglected these neighbors; we have looked on with seeming unconcern for many years to the development of trade between these neighbors and European countries, as if a share of their trade were a matter of great indifference to us. We have been so engrossed in developing our own resources and domestic trade that we have allowed ourselves to be left far in the rear of the argosies of commerce. It is said that our merchants are not enterprising enough; that they should explore a market for our surplus products; that they should emulate the English traders, whose wares are laden for every port in the world.

I think, sir, our merchants have been a little lacking in enterprise in this direction. I am not aware that they have taken any special and general interest in cultivating harmonious and profitable relations with the states to our south or in urging legislation to that end. The demand for the promotion of such relations comes more as an active development in the legislative mind from a popular undercurrent of American patriotism than from mere trade movements. Perhaps it is the best augury of success that this is the case. The question is not of mere local interest or pushed by any local or class influences. It has arisen as a patriotic ambition, and has, therefore, the popular support. This ambition is shown in the most emphatic manner by the action and nominations of the recent national convention at Chicago, and I doubt not that the other convention, that is soon to be held in that city, will not fail to give equal emphasis to the American desire in this matter.

This is an affair of state as well as trade. The state takes the lead, and commerce will follow in her track if we act as becomes our people and our resources. We have passed that era in our history when the Federal power was restrained by rigid construction of organic law within bounds that prevented any national legislation for the fostering of home industries and the development of foreign trade. We are now in an age when it is not regarded as unconstitutional to appropriate money from the Treasury for the establishment of trade relations with foreign nations by other means than private enterprise and the slow process of diplomacy. We now go directly to the object by national enterprise, by Government commissions aided by public money, in the same manner that the national governments of Europe developed foreign trades for their merchants.

I favor all honorable agencies of our national power in this direction. I hold that that commerce is for the general welfare, and that all just and effectual measures for the promotion of our commercial relations are constitutional, whether to aid our merchants, our farmers, or manufacturers. The Treasury was established and taxes are levied for the general welfare of the people, and Congress is the constitutional judge of the mode in which these agencies should be used to that end. We have the power to aid the treaty-making branches of the Government in all commercial matters and in all matters that are proper subjects of treaty and which require for their execution an appropriation of public money. The money so appropriated may be expended for the maintenance of consuls, or commissions, fixed or roving, or for the maintenance of ships as agencies of commerce. It is as much our duty to tax the people for the development of commerce as for the development of the industrial arts at home.

Whether this shall or shall not be done is always a question of public policy rather than of constitutional power. I see no difference in principle between supporting a consul to develop commercial relations and supporting a commission like that now proposed. I see no difference between supporting consuls and commissions for this object, and aiding by public money ships or lines of ships to more effectually develop commerce. We have long adhered to the policy of aiding our interstate commerce by appropriating public money for certain improvements on our inland waters as well as ocean harbors. One-tenth of the moneys so appropriated in the last ten years would have developed a foreign commerce of which we might now well be proud. The day has long passed when it was considered doubtful policy to improve the pathways of interstate commerce and establish expensive Federal agencies for its development and protection. And the day has come when no party dogmas will be allowed to stand in the way of like development and protection for a foreign trade. Hereafter the question will be, What agencies and what amounts of public money are necessary for the development and protection of this trade? This is the position that the Republican party has taken by its latest platform; and no political party can hope to outstrip it in popular esteem or confidence that will not take an equally advanced position in regard to our commercial relations.

American private enterprise is not altogether lacking in the direction of South and Central America. In the year ended June 30, 1883, our trade with Mexico, exports and imports, amounted to $34,644,693; with the Central American States to $8,321,801; and with the South American states to $107,583,811. In addition to this, our trade with the West Indies the same year amounted to $128,929,992; a total trade with our southern neighbors amounting to $280,000,000 in round numbers. But this is not our proper share of this trade. We can improve on it as we have done in Mexico. Our trade, imports and exports, with that republic in 1867 amounted to only $6,467,732. Ten years after we developed this trade to $11,097,758, and in 1883 to $34,644,693, including imports of gold and silver amounting to $9,782,986! We are making great developments in our trade with Mexico; and when the recent treaty will be in operation—which is only delayed by this House—it will get an impetus that will drive out all our European rivals. Sixty millions of American capital are already invested in railroads connecting the great inland marts of that country with our own, while Congress has done nothing whatever to advance our trade interests in that direction. Germany is ahead of us there with a commercial treaty.

The following table exhibits the value of the exports of the precious metals and of other commodities from Mexico to the several countries named during the fiscal year ended June 30, 1883:

Countries.	Exports.		
	The precious metals.	Other commodities.	Total.
England	$15,201,600 36	$2,056,642 25	$17,258,242 61
United States of America	9,036,773 33	7,702,324 37	16,739,097 70
France	3,561,987 13	642,918 42	4,204,905 55
Spain	1,035,013 00	954,245 74	1,989,258 74
Germany	392,955 92	732,763 29	1,125,719 21
United States of Colombia	298,937 55	59,229 59	358,167 14
Guatemala	92,875 00	686 00	93,561 00
Belgium		29,040 00	29,040 00
San Salvador	8,515 40	288 00	8,803 40
Italy		300 00	300 00
Venezuela		300 00	300 00
Ecuador		200 00	200 00
Total	29,628,657 69	12,178,937 66	41,807,595 35

These figures show how much more advantageous to Mexico is her trade with us than her trade with the European nations. The latter exact from her specie payments, while we take pay for nearly half of our trade in "other commodities." England demanded over $15,000,000 in precious metals, and took only a trifle over $2,000,000 from her in "other commodities." France and Spain engage in the like trade exhaustion of Mexico, while Germany seeks the highest reciprocity by taking for her exchanges more than double in products other than precious metals. We will have to look out for Germany under her recent Mexican treaty.

I here offer some official statistics of our trade with Mexico, the West Indies, and Central and South America.

Statement showing the trade of the United States with the countries below named during the year ended June 30, 1883.

Countries.	Imports.			Exports.							Total imports and exports.
				Domestic.			Foreign.			Total exports.

This exhibit shows a lamentable balance of trade against us in South America. We imported from there in 1883 nearly seventy-seven millions of dollars' worth of merchandise, and exported there not quite twenty-nine million dollars' worth of our domestic products. Cuba had a balance against us of over $50,000,000 on account of the products we imported from her. With the United States of Colombia the balance is slightly in our favor. With the progressive Argentine Republic the balance against us in the exchange of merchandise is about 50 per cent. of the trade. In Venezuela the balance against us is over 50 per cent. In British Guiana the balance against us is 75 per cent. of the trade. In Uruguay the balance against us is nearly 70 per cent. of the trade. With Chili the balance is largely in our favor; while with Peru the balance is as large the other way. We bought from Brazil goods to the value of $44,488,459, while that empire only took from us goods of our production to the value of $9,159,330.

Mr. Speaker, a glance at the figures of these exhibits will show the importance of the appropriation for a trade commission to the South and Central American States. Europe is getting the advantage of the balances against us in these countries. Our farmers are liquidating these balances by paying for the South American products shipped to Europe, or by paying to the South American countries a like amount for the goods they ship to or purchase from Europe.

INTERNATIONAL RELATIONS.

Mr. Speaker, I believe in the Monroe doctrine in its widest extent and its broadest construction. I want that doctrine enforced. The American peoples are one and the same in race and institutions. Even Brazil, though in form monarchical, is in effect a popular government. The white race of this continent is, like ourselves, of European origin, and the old American stock south of us, though called Indian, is not of the same stock as our North American tribes.

The ancient peoples of Mexico and Central and South America developed a civilization on this continent that dates further into the ages gone than the oldest civilizations of Egypt or Asia. Mexico and Peru, though far in decay in the time of Cortez and Pizarro, exhibited an advance in the arts and sciences, in social polity and industry, that astonished the Spaniards—then the most refined and advanced people of Europe. That such people as the Aztecs, the Mayas, the Quichés, the Colhuas and Nahuas or Toltecs of Mexico and Central America, and the Peruvians, whose empire extended two thousand miles along the South American coast and far inland across the Andes, were subjugated so cruelly as to destroy their civilization is one of the saddest events of disaster to humanity. These were peoples with whom, had they been treated in the light of modern humanity, we would have been proud to deal as equals and as friends. We could have learned much of science and art and social regulations from them. When I am reminded that only one-tenth of the population of Mexico is of the pure Spanish descent I also recall that the other nine-tenths are of a stock that has shown a capacity for civilization and enterprise that falls in no degree below our own.

I would remind you, sir, that it was men of this so-called Indian stock who joined with their white friends in the revolutions that overthrew the power of the Spanish Crown on this continent and founded so many republics like our own on the ruins of kingly despotism. Sir, it is an honor to any nation to enter into close relations with peoples who are descendants of the best blood of two continents. The stock that produced the liberator Juarez, that trampled into dust the empire set up in Mexico by three great powers of Europe—England, France, and Austria—has in it the material to make mighty nations. The peoples of Mexico and South and Central America are just awakening from the torpor of four centuries of ecclesiastical and superstitious bondage. They have interests and institutions more in harmony with our own than those of Europe, and it is for us to develop the closest relations of amity and commerce with them rather than with the Old World, where all is aristocracy and serfdom. The resources of the nations south of us are even greater and more varied than our own. Let us give to them what aid and encouragement for development we can. It will be for our great and lasting benefit. I know Mexico well. What a grand country it would become through the development which close relations with us would give it! Yet she is only one of many such states to our south. Why do you not carry into operation the trade convention made with Mexico? We desire her trade, and she wants to trade with us in largest reciprocity.

Mr. Speaker, I know our neighbors of the Republic of Mexico; I therefore respect and admire them. Hence I desire to cultivate the most amicable relations with them.

The advantages offered to us in the convention which is proposed by a bill here pending to be carried into effect are so numerous and apparent that it would seem to be unnecessary for any gentleman to advocate immediate and favorable action on our part. The report made by our Committee of Ways and Means sets forth the valuable concessions offered to our commerce by the United States of Mexico. It says that if there be any objection to the treaty, it lies not in what it proposes, but in what it omits.

There should be no limitations on the commerce between any of the independent states of America. We should cherish toward each and all of them the most friendly sentiments and relations. They have all proved their right to independence in the same fiery ordeal as that through which our fathers passed in asserting theirs. They have the same love of free institutions as that which inspires us. They are our younger sisters. Our birthday long antedates theirs; and this alone might be cited as one reason why their development is not up to our standard of advancement. But in ambition they are not behind us; and in physical resources of wealth and prosperity they are even more abundantly endowed than their elder sister. Already Mexico invites us to come in upon her highways of commerce and partake of the superabundance

of her wealth. We have no interests that can be regarded as being in rivalry with any of hers, no institutions that are foreign to her people, no aspirations inimical to their welfare. There is nothing to stand in the way of the most amicable relations between the sister republics.

It is true that in population we greatly preponderate over Mexico. We are 55,000,000 to her 10,000,000; but to the south of her are millions of peoples kindred to her own. These will in good time follow the example of Mexico when you enter the door which she has so hospitably opened for your trade.

Are not these peoples imbued with the same love of liberty as ourselves? Are they not of our own blood and lineage? Men talk of the Latin race. Language is not the evidence of lineage. It is blood that tells.

The Spanish settlements on our continent were peopled from the same stock which we are proud to claim as our own. The Spanish blood of this continent is as Gothic as our own, as Celtic as our own. The Celtiberian peninsula got the same Germanic mixture of blood that is to-day called Anglo-Saxon in our mother tongue. Even though the evidences of ancient history were destroyed, we might well claim this common consanguinity from the records of the last few centuries, whereon are emblazoned the valor, the enterprise, and the grand developments of the arts, science, literature, and culture of old Spain when she was the first power in Europe and mistress of the universal seas.

Paradoxical as it may seem, sir, it was this advanced condition that not only retarded Spain, but threw her back in the march which her less cultered neighbors in the north of Europe took up so energetically in the seventeenth century. The evils of which we are to-day complaining, and of which the older countries of Europe have much more reason to complain, are the same that chained the proud lions of Castile and Leon, namely, the inordinate aggregation of wealth in the hands of the few and the consequent impoverishment of the masses; the evil which the learned statesman from New York, Mr. S. S. Cox, has so often and so vigorously denounced in his eloquent appeals to this House for reform.

Though I am not yet emancipated from the "bondage" of the "tariff," though I do not yet see the way to equal commerce with all the world, I most heartily accept the doctrine of the gentleman [Mr. S. S. Cox] in its application to our western hemisphere. Here, on the cis-atlantic side of the globe, I would indulge the largest reciprocity between the nations and abolish all restraints upon their commerce. I would have the freest exchange of commodities. I would have our flag in every port, our ensign on every sea—the emblem and harbinger of American free trade from the Saint Lawrence to Cape Horn, from the Pacific to the Atlantic. Already we have clasped Mexico to our bosom. She is bound to us with bands of steel and ties of interest, and the galaxy of southern sisters beyond are ready to join the peaceful union.

Sir, it has often been said that the soft skies of the sunny climes are not congenial to our race; that we make our best development amid hyperborean blasts, which brace the energies and tingle the blood to action; but you will always notice, sir, that this criticism comes from the hyperboreans themselves, like the deprecation of physical beauty that comes from the hard-featured North. This deprecation is inspired by envy, and it is not true that energy and civilization belong to the wintry climes.

Sir, the clime that produces the female form divine in its most perfect loveliness can not be uncongenial to man. History disproves this libel on the south lands. Look at the splendid ancient civilization of Mediterranean Europe, Mexico, and Central and South America. Where can you surpass the valor that spurned the Trojan plains or withstood the hosts at Thermopylæ, or that of the incas in the passes of the Andes?

The culture, learning, and refinement of ancient Greece, the mother of republics, was only surpassed in the sunny climes of this continent. Did not Sparta and Carthage flourish in the sunny clime? And Rome—the once proud mistress of the world—did not Rome give civilization and letters to modern Europe through the passes of the Pyrenees? And did not Araby contribute also through the same passes? Is it not to Rome's Twelve Tables and the *jus civili* built upon them that we owe the maxims and principles of our laws? It was in the sunny clime that the codes of European jurisprudence first took root and flourished, until they grew into the great tree that cast its protecting branches all over our race—the same that shelter us to-day. The vulgar error that our common law was transplanted into British soil by barbaric invaders from the rude fastnesses of German forests is no longer entertained by intelligent writers. Mr. Speaker, it is in the sunny clime that man reaches his highest development. You may launch your Yukon explorations; Canada may force her way to the Pacific over eternal snows and frowning peaks; the great Northwest may send back its "booms" to us over alkaline plains, rude Montanas, and bleak Dakotas; but I, sir, a son of the balmy south land, look from the flowry prairies and luxuriant fields of Texas, my own progressive State, to see the star of empire take its course amid the brilliant constellations of the southern sphere.

Sir, it was to Mexico that the star of empire first took its westward way; and if its course was marked with blood, is not this but another evidence of our consanguinity with the sons of the cavaliers who bore the standards of Castile and Arragon across the western main and planted them in triumph over the halls of the Montezumas? Would not your Puritans, who regarded the North American Indians as the embodiment of "sooty devils," have enslaved them as the Spaniards did the Aztecs and Peruvians, had the Massasoit tribes been as far advanced in civilization and industrial pursuits as these ancient peoples?

The dark age of military conquest has passed away; a brighter day has come to this continent. Let this commission be its herald. Our stars beam on another empire, and southward they take their way to guide the conquests of commerce and international good-will.

This, sir, is the beginning of a new era of progress and close relations among the sons of men whose ancestors preserved to Europe the civilization of Rome and to the world Christianity; sons of men who gave literature to Europe and founded the schools of the modern arts and sciences; sons of men who stemmed the Saracen invasions and placed the Cross forever above the Crescent; sons of the peers and paladins who rallied around the standard of Charlemagne in the pass of Roncesvalles and bathed their sabers in the blood of the infidel host. These are the men, sir, who, acting their own proverb of hospitality, throw open their doors in Mexico and invite us to enter and act as if we were in our own house, and their southern kin are no less eager for our good-will and intercourse. They offer us a market for our wares. They will take the industrial surplus that so greatly impedes the employment of labor in our factories, and they will give us in exchange their gold and their silver, the gems of their mines, and the precious woods of their fragrant forests.

Already Mexico invites us to come in and aid her in developing her rich tropical resources, so that the luxuries of her south land may, by reciprocity and exchange, become common to our toiling millions. She does not, nor any of her southern sisters, propose to compete with your iron fabricators or textile makers. They all prefer the ease and independence that come from the healthful exercises of the fields. Never were the conditions for agreeable and profitable commercial reciprocity better between contiguous and kindred people—kindred in blood, institutions, and aspirations. They ask us to come in and aid them in restoring to America a richer and better civilization than their warlike ancestors destroyed on the continent they discovered four centuries ago. Let it not be said that we refused this generous invitation; that we neglected this golden opportunity for spreading good-will and promoting general welfare among the nations and peoples of this continent.

The Mexican Pension Bill.

SPEECH

OF

HON. WILLIAM WALLACE BROWN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 5, 1884.

On the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war, and for other purposes.

Mr. BROWN, of Pennsylvania, said:

Mr. SPEAKER: I took some pains immediately after the passage of the Mexican pension bill through the House in March last to inquire into its merits (before its passage there was no opportunity to do so), and I found that from the best information attainable the bill covered by its several provisions a very large number of cases having little or no merit. The following letter from the Adjutant-General of the Army, which I print, shows an enlistment of 37 per cent. after the 30th day of September, 1847. It is as follows:

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
Washington, March 18, 1884.

DEAR SIR: In reply to your verbal inquiry I have to inform you that the report of the Adjutant-General of November 30, 1847, shows the strength of the Army (volunteers and regulars), enlistments, &c., up to September 30, 1847. (See in this connection Executive Document 8, published in Senate documents of the first session Thirtieth Congress, volume 1, 1847–'48.)

There appears to have been no report made by the Adjutant-General of the number of enlistments from September, 1847, to the termination of the war, in July, 1848; but taking the statement contained in the Adjutant-General's report, in which he gives the aggregate strength in the regular Army and volunteer forces during the war with Mexico as about 100,000, and deducting therefrom the number of men in service September 30, 1847, about 63,000, would make the number of enlistments from September 30, 1847, to the end of the war, July 4, 1848, about 37,000.

Of course you will understand this is only approximately correct, as no tabulated statement respecting the number of enlistments from September, 1847, to July, 1848, have been made.

Very truly, yours,

R. C. DRUM, *Adjutant-General.*

Hon. W. W. BROWN,
610 *Thirteenth Street Northwest.*

In this connection it should be borne in mind that the last battle of

the Mexican war was fought on the 14th day of September, 1847, on which day the City of Mexico was surrendered and the power of resistance to the American arms was practically at an end. It is true that Santa Anna carried on a defensive guerrilla warfare until late in October of that year, but there was nothing rising to the dignity of a battle after the fall of the City of Mexico; hence every soldier who went on the muster-rolls after that date performed no other service for his country than to show his good-will and his patriotism by enlistment. However meritorious this may have been, it was not such a sacrifice for country as to warrant a pension, except in cases where by so doing he may have become disabled; and all such cases are covered by existing laws.

Remembering, what must be conceded as a fact, that the Army of the United States which conquered Mexico was composed largely of young men, and that many who were killed in battle or fell by the way from other casualties incident to war died leaving no widows, it is perfectly apparent that at least 50 per cent. of the beneficiaries under the bill as it passed the House not only took no part in active service, but never left their home rendezvous. Of the one hundred and one regiments mustered during the entire period covering the Mexican war, no one will contend that more than fifty regiments (certainly not more than 50,000 of the rank and file) ever marched upon or even toward Mexican territory.

The first battle of that war was fought early in May, 1846, and, as I have said, the last on the 14th of September, 1847, a period less than half as long as the war for the Union. The treaty of peace between the United States and Mexico was signed February 2, 1848, ratified May 10, ratifications exchanged May 30, and the evacuation of Mexico took place on the 12th day of June the same year. I speak of this history in no disparaging sense. I concede to the soldiers who fought the nation's battles in far-off Mexico all the historic valor that has characterized the American soldiery in all the wars of the Great Republic. I refer to these facts only to show that if the soldier of that war deserves so well of his country as to entitle him to a "service pension," how much more is it due to the soldier who fought and suffered through four years of desperate war to save the Union that he should receive generous reward for the loss of health and the spilling of his blood.

This bill as amended in the Senate does not provide for a "service pension" to the Union soldier, though there is no equitable ground for refusing it to him if one is granted the Mexican soldier. It only seeks to liberalize the laws governing "disability pensions." Is there wrong in this to the Mexican soldier? If there be wrong, even as amended, it is to the Union soldier. As the bill passed the House it was a glaring insult to the latter.

Why this conspicuous omission of the Union soldier from the bill as it passed the House? No wonder the gentlemen on the other side put the bill through under the whip and spur of a suspension of all rules with only fifteen minutes on a side for debate! It was too rank a wrong to meet discussion. The gentleman from Indiana justly characterized the proceeding as follows:

> This bill will put men on the pension-roll who never left the camp of rendezvous. It will put men on the pension-roll who never suffered the loss of limb or of health by wounds or by sickness. In addition to that, Mr. Speaker, it puts all this sixty-day class—and I refer purely to the service clause—it puts men on the rolls regardless of health or age or pecuniary condition. It puts on the pension-roll millionaires, men who do not need the assistance of the Government of the United States. It puts Senators and Members of the House of Representatives on the pension-roll. It pensions men who are to-day giving it their support. * * * How does it happen that you forget two millions of men who served in a war certainly equal in its proportions to the war between the United States and Mexico? How does it happen that you forget to include in this beneficent measure the men who served in that war for a period of three years, or two years, or one year? You happened to think of the Creek war. You happened to think of the Black Hawk war. * * * I am talking about what you did on that side. And you happened to think of the Seminole war. You remember the wars that were prosecuted by States to recapture their runaway negroes. You remember the wars that were brought on by the States by violating the sacred obligation of treaty between the United States and savage tribes. You remember the wars that were provoked by State governors against national authority in the assertion of your State-rights doctrines. You remember all who served in those wars and propose to put them on your pension-roll. Why do you forget these other men, the Union soldiers?

Is it at all to be wondered at that the Senate should, while considering this bill, incorporate amendments thereon in the interest of the Union soldier? Gentlemen insist that the Mexican soldier should receive special favors from the Government. They demand for him "service pension," while they who wore the Union blue from 1861 to 1865 can only receive a "disability pension."

The Senate has also amended the bill so as to increase the widow's pension from $8 to $12.

Do gentlemen deny the justice of the amendment? No, they admit—at least the gentleman from Alabama [Mr. HEWITT] does—that the amount named in the amendment is none too much to keep starvation from the widow's door; yet, notwithstanding, the filibustering has gone on from day to day until it is now apparent the bill must fail.

The Senate has amended the bill so as to shift the burden of proof from the soldier to the Government in relation to his physical condition at the time of enlistment. No man denies that the amendment is a proper one. The best possible evidence attainable is the fact of acceptance into the service. To require the soldier to prove that the examining surgeon did his duty twenty years or more ago is as unreasonable a requirement as human ingenuity could devise.

The rule as at present applied is in many cases unjust in its operation and is in every way unworthy a great government. That it should have remained so long in force is a marvel and a reproach. How can gentlemen justify their opposition to this bill, seeing so many needed reforms in our pension laws appear among its provisions? Can they deceive themselves with the hope that the country will not understand the purpose of a whole week's filibustering? Gentlemen seem enraged because the Senate has limited service-pensions to the period in life when the Mexican soldier reaches the age of 62 years. Do they remember that the Union soldier gets no service pension whatever; that he must show a disability and prove that it began while in his country's service? Do they remember that the Mexican soldier has already received one hundred and sixty acres of land, whether he desired to occupy it or not; while the Union soldier can only secure land like other citizens, by occupation, receiving a credit for his years of service?

Sir, from no standpoint is this opposition to the Senate amendments justifiable. They are all just, equitable, and humane. True, they limit the number of beneficiaries of the war of 1846, but only so far as seems necessary to curtail drafts upon the Treasury, so that the Union soldier whose health and blood were given a free sacrifice to the country may be remembered out of the nation's bounty also.

The failure of the legislation embodied in these amendments is to my mind a grievous fault. To the soldier of the country and to the widow and the fatherless the news of this day's doing in the national Congress will come as a message of ingratitude and wrong.

The following amendments to the Mexican pension bill—as it passed the Senate—I desire to print with my remarks, that the country may judge whether they are deserving the bitter opposition coming from the other side of the House.

APPENDIX.

SEC. 8. That every person specified in the several classes enumerated in section 4693 of the Revised Statutes of the United States, and the amendments thereto, who served in the military or naval service, as mentioned in said section, for the period of three months during the war of the rebellion, and has an honorable discharge therefrom, and who is or shall become disabled from any cause not the result of his own gross carelessness, disreputable conduct, or vicious habits, and shall also be dependent upon his own labor for support, shall, upon making due proof of the facts, under such regulations as may be prescribed by the proper authority, be placed upon the list of pensioners of the United States, and be entitled to receive a pension during the continuance of such disability at a rate proportionate to the degree thereof; and such pension shall commence at the date of filing an application therefor. The highest rate of pension granted under this section, which shall be for total incapacity to perform any manual labor, shall be $24, which is hereby made divisible upon that basis for any less degree of disability: *Provided*, That no person entitled to or receiving an invalid pension under existing laws, or such as may be hereafter enacted, granting pensions for disabilities contracted in the military or naval service of the United States, and in line of duty, greater than that provided for herein, shall receive the benefits of this act; but any applicant for such invalid pension having an application therefor pending, or who shall hereafter file his application for such pension, may, by a declaration over his own signature, at any time, elect to prosecute his said claim under this act or under the general laws, and his pension, when allowed, if prosecuted under this act, shall commence from the date of such election.

SEC. 9. That all widows or minor children of soldiers and sailors who as such are now receiving, under existing laws, general or special, the sum of $8 per month, by reason of the death of such soldiers and sailors in service or from a disability contracted in the military or naval service of the United States, and in line of duty, shall from and after this date be entitled to and receive the rate of $12 per month in lieu of said rate of $8; and all such widows or minor children who shall hereafter be found to be entitled to the rate of $8 per month under existing laws shall be entitled to and receive the rate of $12 in lieu of said rate of $8.

SEC. 10. That if any invalid pensioner pensioned for a disability contracted in the military or naval service of the United States, and in line of duty, has died or shall hereafter die, leaving a widow or minor child under 16 years of age, or both, at the date of the death of such pensioner, such widow and minor children shall be entitled, in the order of succession named, to an original pension in their own right, under existing laws, without being required to prove that the death of such pensioner was due to his military or naval service of the United States, and shall receive the rates now allowed by law, except that such as may be found to be entitled to $8 per month under existing laws shall receive in lieu thereof $12 per month.

SEC. 11. That pensions granted widows on account of minor children shall be continued without limit as to age, whenever it shall appear that such minors are of unsound mind or physically helpless so as to render them incapable of earning a subsistence: *Provided*, That such widow retains the care, custody, and control of such minors; and in the event of the death or remarriage of such widow, or abandonment by her of such minors, then the pension and additional pension shall be continued to them in their own right, without limit as to age, during the continuance of such disability, payable to a duly constituted guardian.

SEC. 12. That in considering the claims of dependent parents the fact and cause of death and the fact that the soldier left no widow or minor children having been shown as required by law, it shall be necessary only to show by competent and sufficient evidence that such dependent parent is without other present means of comfortable support than his or her own manual labor, or the contributions of others not legally bound for his or her support; and such as may be found to be entitled to $8 a month under existing laws shall receive in lieu thereof $12 a month from the date of this act.

SEC. 13. That in all applications under the general pension laws, including this act, where it appears by record evidence that the applicant was regularly enlisted and mustered into the service, that fact shall be *prima facie* evidence of soundness at the time of his enlistment; but such presumption shall be subject to rebuttal by record or other competent evidence.

SEC. 14. That no person shall be entitled to more than one pension at the same time under any or all laws of the United States, whether such pension shall have been already obtained or shall be hereafter obtained, unless the act under which such pension is claimed shall specially so declare.

The Mexican Pension Bill—Amendments in Favor of Union Soldiers—Justice to the Nation's Defenders—Relief for Destitute Widows and Orphans—Simple Justice no Extravagance—Cheaper than Standing Armies—Bad Faith of the Democratic Party—A Fearful Reckoning in the near Future.

SPEECH

OF

HON. JOSEPH D. TAYLOR,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 5, 1884.

The House having under consideration the Senate amendments to the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war, and for other purposes—

Mr. JOSEPH D. TAYLOR said:

Mr. SPEAKER: The letter which has just been read by the Clerk at the request of the gentleman from Kentucky [Mr. BLACKBURN] charges that the Senate amendments to the Mexican pension bill, now under consideration, subject the survivors of the Mexican war to humiliation and disgrace. And I regret to add that this opinion is generally entertained by the other side of this House, and it seems to be a foregone conclusion that no bill in the interest of the Union soldier shall become a law in this Congress.

It is not true that these amendments discriminate against the Mexican soldier. This bill favors the Mexican soldier in two important respects. In the first place, it provides that all the survivors of the Mexican war shall be pensioned when they become 62 years of age, without reference to disability or dependency. In the second place, it gives a pension to every Mexican soldier before he arrives at this age if he is either dependent or disabled; while the Senate amendments only provide that Union soldiers shall receive a pension when they establish the existence of their dependency and disability. The language in reference to the Mexican soldier is, "disability or dependency;" while the language in relation to the Union soldier is, "disability and dependency." The existence of a disability or of dependency, the one or the other, entitles a Mexican soldier or his widow to a pension, while it requires the existence of both to entitle a Union soldier or his widow to a pension; and at the age of 62 all Mexican soldiers are pensioned, while no such provision is made for Union soldiers at any age.

And yet I regard the bill as amended by the Senate a fair one, taking it altogether. It pensions a greater proportion of the Mexican soldiers than it does of the Union soldiers, but the maximum pension of the former is only $8 per month, while the maximum pension of a Union soldier in cases of total disability is $24 per month. Age, dependency, or disability without any further showing entitles the Mexican soldier to $8 per month. There is no rating in the provisions which relate to the Mexican soldier, while the Union soldier who shows the existence of some pensionable disability, and also shows that he is dependent upon his own labor for support, receives a pension in proportion to the extent of his disability, basing a total disability at $24 a month and making a less degree of disability divisible on this basis.

It is a little singular, Mr. Speaker, that gentlemen on the other side differ so widely as to their grounds of objection to this bill as it is now amended. Some of them object because it discriminates against the Mexican soldier, while some others object because it discriminates against the Union soldier. Objections of this kind are futile and groundless. In fact they are a mere pretense. If any member of this House is a friend of the Mexican soldier, and honestly believes that he deserves some additional recognition on the part of the Government, will he object to this bill because he can not, in the same bill and at the same time, get more? When the Government passed a law granting a land warrant to every Mexican soldier, was it opposed because two land warrants were not granted at the same time, or because a section of land was not granted instead of a quarter-section?

Will a friend of the Union soldier oppose this measure, which is so full of aid to the soldiers and widows and orphans made helpless and dependent by the late war, because it is claimed that the same bill is a little more favorable to the survivors of a war that was waged thirty-seven years ago? This is nonsense. It is too much like the boy who insisted that he had the smallest piece of bread and butter, no matter which one was given him. If the Mexican soldiers deserve more than this, let it be granted next time. And if the Union soldiers deserve more, and they certainly do, let steps be taken in the future to this end. It is impossible to do everything at once, and we should not withhold a part now because we can not get all that we desire, especially as the granting of this part will not in any way prevent additional legislation in the future.

Mr. Speaker, I do not think there has been any measure before the Forty-eighth Congress more important than the one now under consideration. I had occasion to discuss the imperfections of our pension laws and the injustice which is being done to our soldiers when the pension appropriation bill was under consideration, and hoped at that time to secure to that bill amendments similar to the amendments made by the Senate to this bill, but was dissuaded from making any effort to do so by the statement then made to the House that the Committee on Payment of Pensions, Bounty, and Back Pay were about ready to report a carefully prepared bill which would correct the defects then pointed out.

A bill was reported from this committee soon thereafter by General WARNER, its chairman, but for some strange reason it was passed under a suspension of the rules, when no amendments could be made and when all discussion was limited to thirty minutes. It contained only one provision in the interest of the soldier, which was the provision that dispensed with proof of prior soundness, while it contained some objectionable features that prevented its favorable consideration in the Senate. I say this because it has been asked why the Senate never acted on General WARNER's bill. The bill did not go far enough to amount to anything, while it contained some very objectionable features.

Before this, when HEWITT's Mexican pension bill was before the House, we attempted to secure amendments similar in some respects to the amendments now under consideration, but failed. On the night when we had our first all-night session I went to Mr. HEWITT and requested his consent to these amendments, promising in this event that we would support his bill and break the deadlock which was then impeding all legislation; but he refused, and his side of the House then as now stood by him in his opposition to this class of legislation.

When the present bill was passed by this House it was also passed under a suspension of the rules, when no amendments could be made and when all discussion was limited to thirty minutes. The Hewitt bill was abandoned when we showed a determination to amend it, and the present bill, the Townshend bill, was passed, in the manner I have indicated, and sent to the Senate, where it was amended and put in its present form.

We are asked why these amendments are not presented in a separate bill, when this House knows very well that numerous bills embracing every line of these amendments have been introduced, and were introduced at the opening of the session, and seven months have elapsed, and yet these bills in which the soldiers of this country and in which the patriotic people of this country are deeply interested have been suppressed. Not a single report has been made in regard to the equalization of bounties, in regard to the payment of arrears of pensions, in regard to the increase of the pensions of widows whose husbands were killed in battle or died from diseases contracted in the service, in regard to continuing the pensions of the imbecile, blind, and idiotic children whose fathers gave their lives to their country, or in regard to any one of a hundred bills introduced in behalf of the soldiers in order to make good the promises and obligations of the Government to its brave defenders. These bills have been throttled and a hearing denied. Democratic committees do not deign to consider such bills, nor do they dare to report against them.

The course pursued by this House in regard to the claims of soldiers is certainly marvelous. Aside from a bill or two removing the charge of desertion, this House has passed no bill during this long session changing in any way the pension laws, bounty laws, back pay, or any other law affecting the soldiers, except the bill before referred to as reported by General WARNER. Not only this, but the Republicans have been given no opportunity to amend any law or to attempt to amend any law in this direction. The Hewitt bill was abandoned, the Townshend bill and the Warner bill were passed on suspension day and under a suspension of the rules, so as to prevent any amendments whatever. The House and every committee of the House is under the domination of the Democratic party, and the only way in which we can hope to get any legislation in the interest of the Union soldier is to attach it to the Mexican pension bill, a bill in which the other side appears to be more interested than in bills pensioning the soldiers of the late war.

The objections to the Senate amendments of the Mexican pension bill now under consideration are based on the fact that it makes certain provisions for the Union soldiers. Let us see what these provisions are. It provides that no honorably discharged soldier shall be prevented from receiving a pension because he can not prove he was sound when he entered the service; or because he can not show when and where he contracted the disability; or because he can not show that he was treated by a surgeon for this particular disease; or because the hospital records fail to show certain facts. Or, in other words, if a soldier has a disability which might have been incurred in the service, and is also dependent on his own labor for his support, under this bill he receives a pension. The same provision is made for the widow in case the husband is dead.

In cases in which minor children now draw a pension until they are 16 years of age this bill proposes that the pension shall continue after they are 16 if they are imbeciles, idiots, or blind. They are as dependent after they become 16 as they were before; and as their father, their natural protector, gave his life to his country, the Government owes these helpless dependents a support. It also provides that the widows and minor children of soldiers and sailors who are now receiving $8 a

month shall hereafter receive in lieu thereof $12 a month, an increase of $4 a month. And in another section it provides that dependent parents shall not be required to prove that a son who lost his life in the service intended to support them, but this fact will be presumed where the soldier left no widow or children. It also provides that in case of the death of any pensioner, leaving a widow or minor child under 16 years of age, or both, such widow and minor child or children shall be entitled to a pension, without being required to prove, as at present, that the death of such pensioner was due to his military or naval service.

These are the provisions which are objected to by the other side of this House. These are the changes in the laws which are resisted here from day to day and from night to night by the Democratic side of this House, with some honorable exceptions. In all the annals of legislation, in all the world's history, no law was ever proposed which had more of the milk of human kindness in it, more of patriotism and gratitude in it, more of justice and equity in it, than the one now under consideration. And gentlemen will find that the defeat of this measure will follow them as a blighting memory wherever a soldier's grave is marked, wherever a soldier's widow weeps, and wherever a soldier's orphan suffers the pangs of hunger or cold. This is only an act of justice, a debt of gratitude, a sacred duty. How dare you shrink from this solemn obligation? The graves of these soldiers are all about you. The wants of these widows meet you in all the pathways of life. The voices from half a million graves plead for the support and maintenance of their helpless children. Let me warn you to-day that in defeating this measure you will enkindle a storm of indignation which will sweep you and your party from the power you now so shamefully abuse.

The passage of this bill as amended is objected to because it will cost the Government an immense sum of money. What if it does? Can any government afford to repudiate its just and fair obligations? We can better afford to pay to these dependent and meritorious wards of the nation every dollar contemplated in this bill, and as much more, than we can afford to repudiate such a binding obligation. The other side of this House advocates a revenue system which would compel us to pay three or four hundred millions a year to foreigners and to foreign lands, while they object to paying a few millions to our own deserving poor. It has been stated here on this floor that this bill would cost the Government from fifty to one hundred millions a year. At the instance of members of both Houses, Commissioner Dudley has carefully computed the cost, and he declares that it will not cost over $16,000,000 a year—the bill and the Senate amendments. He estimates that pensions to the survivors of the Mexican war will not exceed $3,500,000, and that the pensions provided for in the Senate amendments for the Union soldiers will not exceed $12,500,000. General Dudley is thoroughly competent to make this calculation, and has the assistance of the best experts in the United States. He has made it, and risks his reputation on its correctness. It was stated to you correctly by Mr. TOWNSHEND, and I only repeat it because the amount has been given me twice by General Dudley pending this contest. And this $16,000,000 will rapidly diminish from year to year as these aged and helpless people pass away.

Mr. Speaker, it has been claimed here in argument that the passage of this bill will bankrupt the Treasury and impoverish the Government. There are people who would do well to talk less and think more. There is a great deal of ignorance among gentlemen who would like to be called statesmen in regard to the policy and organism of our Government. It has been repeatedly stated here that we pay out more money to our soldiers than any government in the world. This is the main argument on the other side, and yet it would be just as wise to argue in favor of tearing down our school-houses and colleges because we have a greater number of them than any other country in the world. The one argument is just as good as the other. The United States Government, unlike all the other great governments on the earth, depends for its protection and defense in time of peace and in time of war not on a standing army but on a volunteer soldiery.

In the recent war we called a million men from the plow, the shop, the forge, the office, the pulpit, and from all the various avocations of life; from home and wife and children; and the world never saw a grander or more efficient army. The peace footing of the English army is about 200,000 men; the peace footing of the Austrian army is 270,000 men; the peace footing of the German army is 450,000; the peace footing of the French army is 520,000, and the peace footing of the Russian army is 690,000; and the annual cost of the Austrian army is $60,000,000, of the English army $80,000,000, of the German army $85,000,000, of the French army $121,000,000, and of the Russian army $138,000,000. These statements do not include the reserves or naval forces. Compare these armies with our regular Army of only 25,000 men. Compare these expenses with the $20,000,000 or $25,000,000 we pay for like purposes from year to year, and you will see which plan is the more economical.

Other countries depend in time of peace and in time of war on their regular army, on a hired soldiery. We do not; we depend on a volunteer soldiery, but to be always sure of a volunteer soldiery we must be not only just but generous. In olden times it was said, "In time of peace prepare for war," and the interpretation then was, to spend the years of peace in building fortifications, in drilling soldiers, in molding cannon, and in preparation for the deadly conflict. But in later times we have found a safer way in which to prepare for war, and that is to build school-houses, erect churches, and win the hearts of the people by providing for the soldier and his loved ones the comforts of home. Do this, and you will have a country which all the people will love; do this, and you will inspire the hearts of the people with valor and patriotism; do this, and the streams of patriotism and loyalty will never dry up; do this, and you will have a country for which men will do and dare and die; and in doing so you will add more strength to the Republic than you will in building up great armies in time of peace, and when the tocsin of war is sounded you will have an army against which no other army in the world will dare to come.

This is the policy of our Government. This is the way to enkindle the fires of patriotism. Assure the soldier that if he dies in battle, or shall be maimed, or shall suffer from disease, those who are dependent upon him will be comfortably cared for, and you will lay the foundations of this Republic broad and deep.

I desire, Mr. Speaker, that this House shall consider the relative cost of the two plans—that of depending on a hired standing army of professional soldiers, or the plan of winning and welding the hearts of the people to the flag of their country by making it the emblem of kindness, gratitude, and generosity. The one is the pathway of a republic, because it lives in the affections of the people; the other is the trail of a monarchy, along which its defenders are driven by the sword and the lash.

Mr. Chairman, is it possible that this long session is to close without furnishing any relief to that class of our soldiery whose necessities have so touched the hearts of the people of this country? Why this great wrong? Why this denial of justice? Why do the Democratic members of this House, with a few honorable exceptions, sit silent in their seats and refuse to vote, in order to defeat this bill? Why have all the bills introduced in this House in the interest of the soldier been suppressed? Why is it that we have been unable in all these months to get a single one of these bills considered in the House or in committee? Why are bills which are in the interest of Union soldiers denied a hearing? Why is it that any bill which could be amended so as to embrace some of these measures is whipped through the House under a suspension of the rules, when no amendment is allowed? Is it because the great Democratic party does not dare to put itself on record as opposing these measures? If the committees could not report these bills favorably, why did they not have the courage to report them unfavorably? Every bill of any importance to anybody is entitled to consideration, and should be reported favorably or adversely. The bill and its author are entitled to this consideration.

A little while ago it was published in Democratic newspapers that a Democratic House was doing more for the Union soldiers than a Republican Senate. Do you know, Mr. Speaker, how that idea went abroad? I will explain. This House passed early in the session a large number of special acts pensioning soldiers, which were sent to the Senate and remained there a long time without being acted on by the Senate. Do you know the reason? If you do not, I will tell you. The Committee on Pensions in the Senate was composed of nine Senators, five of whom were Republicans and four were Democrats. For a long time Senator SABIN, of Minnesota, was absent, and this left the Pension Committee four and four. The RECORD will show the absence of Senator SABIN, and the further facts that during his absence pension bills were reported adversely by the Democratic subcommittees, and that no progress was made in passing pension bills. This hitch in pension legislation was removed by the resignation of Senator SABIN, who was still absent, and the appointment of Senator WILSON, of Iowa, in his place on the Pension Committee, since which time every pension bill that could be reached, including those reported upon adversely by Democratic members, has been passed by the Senate. The Senate has not only passed these bills, but it spent several weeks in maturing the bill now before this House, which provides not only for Union soldiers, their widows and orphans, but for Mexican soldiers and their dependents as well.

Mr. Chairman, the last thing that my colleague, General WARNER, did before starting to Chicago was to make an earnest speech against the passage of this bill. Ostensibly he was opposing one of the Senate amendments, but his argument went to the merits of the bill. He declared, as he has done repeatedly during this session, that all pensions should be limited to disability incurred in the service; that to grant pensions on any other principle would be dangerous and vicious legislation; that this country had never departed from this principle but twice, and that he regarded these as two very bad precedents. In his absence I shall not attempt to reply to his argument or quote what he then said, or what he said on this subject at any other time, but on behalf of the soldiers of the Union Army, and on behalf of their helpless widows and children, who have so earnestly appealed to us for relief, I want to enter my protest against the action of his committee. He is the chairman of the Select Committee on Payment of Pensions, Bounty, and Back Pay, to which was referred the most important legislation of this session touching the soldiers and their dependents; and I regret to say that this committee has proved the graveyard of all this important legislation. It never reported but one bill, and this was so objectionable to soldiers that the Senate gave it no consideration.

Early in the session I introduced a bill granting arrears of pensions, which went to this committee. Governor Hart's bill granting pensions to all soldiers who had rendered a certain amount of service and who had arrived at a certain age, and scores of others of like character, were sent to this committee for consideration; but they have all slept the sleep that knows no waking. It seems to have been determined from the opening of this session to this hour that no bill in the interest of the Union soldiers should become a law, and that this end should be accomplished, not by open and frank opposition, but by stealth and cowardice. The Democratic party holds in its iron grasp all of the committees of this House, and determines here from day to day and from week to week what shall be and what shall not be considered. We have asked that this bill be put on its passage, and we have been refused. We have asked that these Senate amendments be voted on, and if rejected, that the bill be sent to a conference committee for amendment; and this has been refused. We have asked that some of these amendments be approved and that the others be rejected, if in this event the bill can become a law. This, too, has been refused.

This bill, which before amendment provided only for the Mexican soldiers, having been amended in the Senate so as to include certain classes of Union soldiers, can only become a law now by the approval of this House being given to these amendments. There is now no hope of any legislation which will give relief to the Mexican nor to the Union soldiers if this House persists, as it has done for the past three days and nights, in its refusal to assent to these amendments. This Mexican pension bill can become a law now in a single hour. It was reached in the regular order on Wednesday, and it has been the regular order ever since, but its defeat seems to be inevitable. The closing hours of the session are at hand, and it is now proposed by the Democratic leaders of this House that we shall adjourn after a session of over seven months without passing a single law that the Union soldiers and the friends of the Union soldiers have asked for.

While I denounce the attitude of this House toward these measures as an outrage upon justice, I desire to pay a tribute of respect to the courage and fairness of a few of the majority, some of whom served in the confederate army, who have stood by the Republican side of this House in this long and determined struggle for the passage of this bill. Unfortunately we have been outnumbered, but we have made the best fight we could, and the responsibility for the defeat of this important measure will be borne by those whose opposition has thus far accomplished its defeat. The soldiers whose quiet homes are scattered over the hills and valleys of every State and Territory, the widows whose letters of importunity lie unanswered on the desks of the members of this House, the homeless and hungry children who keep green the grave and memory of him whose footsteps they will never again hear, will understand what the rejection of these Senate amendments means, and will appeal to another tribunal, where justice will be more equitably measured out.

There is one other thing I want to say and then I am done. It has been claimed that these Senate amendments will give service pensions to a large number of Union soldiers. Suppose it does, should not these classes be as much the beneficiaries of the Government as any other class? Strictly speaking there is no service pension provided for in any of these Senate amendments. They only relate to the character of the evidence which the Government shall require. When the soldier shows the existence of a disability which can reasonably be presumed to have been incurred in the service this bill gives him the benefit of the doubt. As all soldiers were examined by a surgeon when they enlisted and were then pronounced sound by the surgeon, this bill presumes them to have been sound at that time and dispenses with this proof. This is a legal presumption never denied in courts of justice and should not be denied to the soldier.

Treatment while in the service, hospital treatment, and the existence of the disease at the date of discharge need not be shown under this bill, as in many cases it is impossible, and under the present law hundreds and perhaps thousands of claims are rejected because this proof is not made, when the length of time since the war and the death of those who know these facts make such proof impossible. The bill dispenses with this kind of proof and makes it possible for a large class of worthy soldiers to receive pensions which have long been withheld from them. The gentlemen who are unwilling that this class of soldiers shall be provided for are willing to restore Fitz-John Porter to his place in the Army, and are willing to vote millions of money to rivers and harbors and a thousand other like measures.

Mr. Speaker, we should not forget or ignore the facts of history. The soldiers of the Union Army were called into service under peculiar circumstances. Treason had its grasp upon the nation's throat. Liberty stood aghast at the monster iniquity, and the civilized world listened with bated breath for the sequel. Should the glorious experiment of free government, the hope of the ages, go down amid the smoke and blood of civil conflict? The question was answered by such an uprising of the loyal masses of this country as the world never saw.

From field and forge, from office and workshop, from hamlet and city they came, hurrying, rushing, crowding to the nation's rescue. They asked no questions about compensation, they drove no bargains, they cared not for the money; they only knew the flag they loved was assailed, and patriotism would brook no delay. They had a sublime faith that, if they fell, the country for which they died would care for their wives and their little ones, and so they bade them a brave good-by and went away, many of them, alas! never to return. They endured hardships without a murmur; they made sacrifices without a complaint.

Thousands and tens of thousands have dragged about with them their maimed limbs and crippled and diseased bodies through all the years since the war without asking a favor of the Government; and now age and poverty and suffering have done their work, and their once skillful hands can no longer minister to their necessities, and they must die in the poor-house; and yet this great Government stands aside and says, "It will cost too much to support these men." Gentlemen, if you persist in this thing the very stones in the street will cry out against such a miserable perversion of economy. It is time this Government should enter upon a more liberal policy toward these patriotic classes; and if this nation ignores the promises made in the hour of her extremity, and turns a deaf ear to the cries of the needy and the destitute, whose youth and strength have been freely offered upon her altars, it will be a millstone about her neck to drag her down from her proud position among the great and glorious nations of the earth.

Internal-Revenue and Customs Collection Districts.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 29, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 7069) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1885, and for other purposes—

Mr. McMILLIN said:

Mr. CHAIRMAN: It is hardly possible in the short time allotted to me to discuss this matter in that systematic way which would be most satisfactory to myself and to the House. All any one can hope to do in that brief period is merely to glance at the pending provisions.

Sir, the object of all legislation should be to insure good government. As little money should be collected from the people as is consistent with an economical and proper administration. There should be no more officers than are absolutely necessary. Each officer is to the extent of his salary a burden to the tax-payer. This burden is borne cheerfully by the good citizen when he can see that the office is necessary. But when he looks around and beholds a thousand officers who could be dispensed with without detriment to the public service—mere tax-eaters—he complains loudly and justly. Our object is to so amend this bill as to consolidate customs offices where it is practicable, abolish internal-revenue collectorships where it can be done, and dispense with all unnecessary offices in both branches of the service.

It will be remembered that during the last Congress there was a proposition introduced into this House to reduce the number of internal-revenue districts in the United States. That failed of enactment by Congress. It passed the House but was killed in the Senate. But agitation of it, as is often the case, resulted in the accomplishment of a portion of the good designed.

The President of the United States and those officers operating under him in charge of the Internal Revenue Department, seeing that the people were determined on relief, at last conceded that true statesmanship and wisdom in the management of our financial affairs was consistent with a large reduction in the number of internal-revenue districts. Under the discretion always allowed them they reduced the number from one hundred and twenty-six to eighty-four. We now find that a still greater reduction can be made and propose to make it. The amendments of the gentleman from Kentucky [Mr. THOMPSON] propose to carry that idea into practical operation.

What is the proposition of the gentleman from Kentucky? We have, Mr. Chairman, at present, one hundred and forty-one customs collection districts in the United States. He proposes to reduce them to sixty-nine. We have eighty-four internal-revenue districts. We propose by the amendments which we hope to carry to reduce them to forty-three. Is there any Representative here who, after a comprehensive view of the entire question, can for a moment say that the reduction can not and should not be made?

I have before me a report made to Congress as to the number, location, and cost of the various customs collection districts of the Government. We are confronted by the fact that of the large number which are embraced there are more than thirty that do not pay expenses. Twenty of them do not pay a cent of revenue. High salaries are given. The cost of keeping up the customs establishment in addition to salaries is so great that in many instances not 10 per cent. of the actual expenses is collected at the port.

The following, Mr. Chairman, are only a few samples of the non-paying customs collection districts which we propose obliterating in part by these amendments. Many others could be added:

Statement showing the amount of revenue collected and the cost of collection in each of the customs collection districts during the fiscal year ended June 30, 1883.

What private citizen would conduct his business this way for a single year? He who would be guilty of it would be called an imbecile or lunatic. Yet there are men here who justify this practice. There are those who complain when we attempt to touch them.

What sense, sir, is there in paying a lot of official deadheads or political deadbeats at alleged ports of entry on the Atlantic Ocean $5,000 a year to collect one thousand? Let us discharge them from the public service and let them go at some self-sustaining calling.

Sir, for years the tax-payers have had to submit to this extravagant folly. But now we propose to put an end to it. If this amendment is adopted it will discharge between two and three hundred officers shown by past experience to be entirely useless. So flagrant is this wrong that the Secretary of the Treasury recommends the reduction we are now attempting. In a report made to Congress he has gone minutely into the matter, showing the extent and nature of the reduction both in the number of employés and in the cost. With his recommendation confronting us who will oppose it? If these reductions are made the service will be simplified, a battalion of officers will be dispensed with, and more than a million squandered on sinecures and worthless customs-collection establishments will be saved. Let no patriot stand in the way of the reform.

Mr. Chairman, I come next to the consideration of the amendment proposing a reduction of the number of internal-revenue collectors, collection districts, storekeepers, &c. We are told by the chairman and members of the Ways and Means Committee that it will be impossible to repeal the internal-revenue system outright, for the reason that it would cause a deficiency in the revenues necessary to carry on the Government of $40,000,000 per annum. The people are not willing to have the tax on clothing and necessaries of life increased, nor should they be. We, I hope, will also have need for some additional revenue to pay Mexican pensions. The bill to pension those old and deserving veterans has passed the House and it is to be hoped will pass the Senate. Besides, the masses would not clamor against a tax on whisky if you would only take away from the system of collection its hardships and oppressions. They are willing for you to require whisky distilled from grain to bear a part of the heavy war debt resting on us if you will give them a simple method of collection which will be in accord with the spirit of our free institutions, and not drag them from home without sufficient cause This much they demand and this they must and will have, even if the tax is retained. Failing to get this short of a repeal of the internal-revenue system, they will and should strike down the system rather than allow the loss of their liberties by Federal usurpation of authority not contemplated by the Constitution.

Sir, we have in the different States eighty-four internal-revenue districts. Who will believe for a moment a large number of them may not be dispensed with? What is the necessity of having so many?

The CHAIRMAN. The gentlemen's time has expired.

Mr. THOMPSON. I will yield a few minutes more to the gentleman.

Mr. RANDALL. And I will also yield him a portion of my time.

Mr. McMILLIN. I thank the gentleman from Kentucky and the gentleman from Pennsylvania for their courtesy.

As I was stating, Mr. Chairman, there are a large number of internal-revenue collection districts which may with propriety be abolished. In them high salaries are given.

Mr. Chairman, we had last year 1,076 grain distilleries operating in the United States. Of that number four hundred and thirty-nine had a capacity of less than five bushels per day. One hundred and seventy-eight others had a capacity of less than ten bushels. It is known to those who are acquainted with the process of distillation that a bushel produces about three and one-fourth gallons of spirits, so that you have all the expense incident to keeping a storekeeper and gauger at all these small distilleries. They get from three to four dollars per diem.

The object of this amendment is to authorize the Secretary of the Treasury to have these small distilleries operated as fruit stills are, without a storekeeper. There are six hundred and seventeen of them, and it is safe to say if the amendment is adopted it will get rid of that number of storekeepers and save more than a million dollars a year. If the amendment fails, you will continue to require a storekeeper and gauger to sit down at a cost of three or four dollars per diem and watch a little worm that makes but fourteen dollars' worth of spirits. You have no storekeepers at the thousands of fruit-brandy distilleries. You trust your people in them; why can you not do the same with the others? There is no more fraud in the brandy than in the whisky distilleries. I do not believe in the doctrine that all mankind are rascals and not to be trusted.

Sir, there were employed last year in this branch of the Government service 1,130 storekeepers and gaugers, 725 storekeepers, and 852 gaugers (those engaged principally in fruit distilleries); total 2,707.

North Carolina alone has three hundred and fifty-eight grain distilleries of less than five bushels' capacity a day, and around these three hundred and fifty-eight storekeepers and gaugers diurnally swarm. What becomes of this hungry swarm of Federal officials if our amendment is adopted? Sir, they will

Fold their tents, like the Arabs,
And as silently steal away.

In many instances more men are kept in commission than there is law to appoint, appropriations to pay, or distilleries to serve. One will be given employment for two months, then another for two, and in some instances a third an equal time, till the salary which should go to one man is doled out to two or three. In this way they are kept dependent on the appointing power. I pass by the political work they are expected to do, and come to another very serious evil which flows from it. That is, they are kept from energetic exertion in some independent business of life, lured on by the hope that a better day and more constant employment will come.

The forty-one collectorships to be abolished by this amendment can be dispensed with without the least detriment to the service. All that will be needed in their stead will be the establishment of agencies to distribute stamps. What injury has come from the reduction made last year? None. Good, and only good, has been the result.

Mr. Chairman, as an illustration of the cumbersome machinery with which we are cursed, I desire to call attention to the following official statement of the collections of internal revenue in the sixth North Carolina district:

Statement showing the number of officers in the sixth internal-revenue district for the fiscal year ending June 30, 1883.

No.	Rank.	Pay.	Traveling expenses.	Rent of office.	Total expenses.	Total collections.
1	Collector, per annum	$3,625 00	$4,065 65	$650 00	$194,248 90	$456,864 16
2	Deputy, do	1,600 00				
6	....do, do	1,000 00				
8	....do, do	900 00				
2	....do, do	1,200 00				
4	....do, do	950 00				
2	....do, do	800 00				
3	Deputy (1½ months), do	1,200 00				
1	Clerk (1 month), do	900 00				
1	Clerk (2½ months), do	900 00				
1	Messenger, do	300 00				
41	Gauger, fees and expenses	18,257 76				
241	Storekeeper and gauger, {$3 per diem / $4 per diem}	141,882 00				

It will thus be seen that it takes 320 officers, at a cost of $194,248 a year, to collect $456,864.16. Sir, let us adopt these amendments and strike this down. Let it not be said that we tamely submit to any such cumbersome method of collecting revenue. These things breed discontent.

Sir, notwithstanding we are told that the repeal of all internal-revenue laws would leave too large a deficiency to be borne—more than thirty millions a year—there is relief we can and should give our people. These amendments can be adopted and more than 1,500 officers dispensed with and more than $2,000,000 saved a year. The tax on tobacco has been reduced from 24 cents a pound to 8 cents a pound—two-thirds of the tax thereby repealed—and still not an officer has been dispensed with. I would repeal the tobacco tax and allow the farmer to sell to whom he pleases.

By pursuing this policy the States could tax these articles and collect a good part of their revenue. The expense and troubles growing out of violations of law in selling little quantities of tobacco would cease, and only good could come from it.

But, Mr. Chairman, to return from this digression to the legitimate question now before the committee, let us, while we are forced for the sake of revenue to submit to any internal-revenue taxes, do our utmost to reduce the expense of collection to the minimum, dispense with all useless offices, pass the bill introduced by me to limit the time within which prosecutions may be instituted in the Federal courts, and strive to dispense with all oppressions growing out of them.

There are many other reasons that could be given for the adoption of this amendment, but I must not further trespass on the kindness of my friend from Kentucky [Mr. THOMPSON] and my friend from Pennsylvania [Mr. RANDALL], who were generous enough to yield me a portion of their time.

Public Buildings—The Work of the Committee on Public Buildings and Grounds in this Congress Compared with the Work of the same Committee in Previous Congresses.

SPEECH

OF

HON. STROTHER M. STOCKSLAGER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 2, 1884,

On bills for the erection of public buildings.

Mr. STOCKSLAGER said:

Mr. SPEAKER: Since it seems to be the determination of this House to adjourn at a very early day, and as all the time of the House until adjournment will probably be consumed in enacting the appropriation bills into laws, I avail myself of the privilege of addressing the House upon the general subject of bills for public buildings reported by the Committee on Public Buildings and Grounds, of which I have the honor to be chairman. I do this because some days ago when we were considering some of these bills we listened to lectures from a little "band of brothers" in this House, constituting a small minority of the House, upon the subject of the bills for the erection of public buildings. These would-be wise men, these censors of their colleagues and associates, have seen proper to use harsh language against the friends of the measures proposed by the Committee on Public Buildings and Grounds, language not only unparliamentary, but simply outrageous, and unworthy of the men who uttered it. I shall not undertake to follow them or to bandy harsh words with them. But I will say, Mr. Speaker, that there is not one word of truth in any of the charges made against the conscientious discharge by the committee of its every duty, and not a single reason why such epithets should have been used, unless it was for the purpose of appealing to the worst prejudices of the worst class of people.

Gentlemen say they are not opposed to the consideration of the bills reported from this committee, but they object to the manner of their consideration under the special order. The resolution adopted by more than two-thirds of this House, under which these bills are being considered, is certainly as fair as that of any previous Congress under which similar bills were considered. What are the facts? Four-fifths of the bills heretofore passed have been passed under a suspension of the rules, under which the same debate was allowed as under this resolution. It is true it required a two-thirds vote to pass bills, but no amendment was permitted, while under this rule unlimited amendment is allowed. Again, under the former system it was simply a matter of favoritism, depending entirely upon the caprice of the Speaker. No one, however meritorious his bill, could have it considered unless he could be recognized by the Speaker. Hence the Speaker was the autocrat of the whole subject. Under this resolution each bill upon the calendars will receive consideration in its order and no favoritism can be shown.

Then why all this outcry? Why all this vilification and abuse? Why should about twenty members here seek to obstruct all public business and raise a hue and cry of jobs and steals? Do they simply want to obstruct public business, or do they want to pose as reformers, and, Pharisee-like, thank God they are not as others? I charge upon them that by their dilatory motions they have wasted nearly two days of the valuable time of this House. They have wasted it upon calls for tellers and for the yeas and nays upon the most frivolous motions, simply to waste time. Shall they escape the condemnation of the people, and it be visited upon those who are anxious to proceed with the public business?

Sir, what can be their motive? In considering the bill for New Albany, which no gentleman on the floor attempted to criticise—in fact, it was universally conceded to be right, and the limit fixed a reasonable one—the bitterest speeches were made, and tellers called and a quorum required at every step. Why? Because it was not meritorious? No. Because the sum appropriated was too large? No. Because time enough was not given for its consideration? No; for no objection was made. Then, why the filibustering and delay? The people of this country can and will judge properly. They will not hold guiltless the men who, when no great principle is at stake, ay, when nothing is at stake, will fritter away days of the valuable time of this House.

Now, Mr. Speaker, I desire to call the attention of the House to the work which the Committee on Public Buildings and Grounds has performed, and which gentlemen upon this floor and some of the newspaper press have seen proper to criticise, and to compare it with the work done by the same committee in previous Congresses. And I think a careful comparison will convince every impartial person that the present committee have acted prudently and economically in their recommendations, and are not justly obnoxious to the strictures made.

There have been introduced in this House and referred to that committee bills for public buildings numbering in the aggregate one hundred and nineteen, a list of which is as follows:

Fort Smith, Ark	$250,000
San Francisco	700,000
A building to contain records of the library and museum of the Medical Department of the United States Army	200,000
Sacramento, Cal	100,000
Key West, Fla	150,000
Jacksonville, Fla	200,000
Macon, Ga	125,000
Springfield, Ill	27,000
New Albany, Ind	100,000
Fort Wayne, Ind	200,000
Council Bluffs, Iowa	100,000
Sioux City, Iowa	200,000
Keokuk, Iowa	150,000
General Land Office	500,000
Opelousas, La	100,000
Monroe, La	100,000
Augusta, Me	200,000
Houlton, Me	50,000
Jackson, Mich	75,000
Duluth, Minn	100,000
Vicksburg, Miss	100,000
Aberdeen, Miss	100,000
Carson City, Nev	100,000
Camden, N. J	75,000
Troy, N. Y	250,000
Newburg, N. Y	75,000
Yonkers, N. Y	70,000
Asheville, N. C	75,000
Charlotte, N. C	100,000
Wilmington, N. C	100,000
Fayetteville, N. C	75,000
Columbus, Ohio	400,000
Lima, Ohio	150,000
Reading, Pa	80,000
Pittsburgh, Pa	1,500,000
Erie, Pa	300,000
Lancaster, Pa	75,000
Providence, R. I	125,000
Greenville, S. C	50,000
Chattanooga, Tenn	100,000
Memphis, Tenn	50,000
Tyler, Tex	75,000
Waco, Tex	100,000
Richmond, Va. (George D. Wise)	75,000
Clarksburg, W. Va	50,000
Oshkosh, Wis	100,000
Capital of Arizona Territory	150,000
Cheyenne, Wyo	50,000
Brownsville, Tex	60,000
Galveston, Tex	40,000
Richmond, Va. (John S. Wise)	100,000
Los Angeles, Cal	250,000
Savannah, Ga	500,000
Fort Dodge, Iowa	100,000
Fort Scott, Kans	100,000
Wichita, Kans	100,000
Army Medical Department, District of Columbia	200,000
Bay City, Mich	100,000
Winona, Minn	100,000
Durham, N. C	100,000
Williamsport, Pa	200,000
West Chester, Pa	50,000
Beaufort, S. C	50,000

El Paso, Tex	$200,000
Houston, Tex	75,000
La Crosse, Wis	100,000
Helena, Mont	50,000
Port Townsend, Wash	57,000
Augusta, Ga	200,000
Owensborough, Ky	50,000
Paterson, N. J	80,000
Auburn, N. Y	150,000
Winston, N. C	10,000
Charleston, S. C	75,000
Allentown, Pa	100,000
San Antonio, Tex	300,000
Allegheny, Pa	500,000
Chicago, Ill	50,000
Leavenworth, Kans	160,000
Manchester, N. H	100,000
Statesville, N. C	20,000
Louisville, Ky	1,500,000
Plymouth, Mass	50,000
Washington, D. C	
Washington, N. J	10,000
Gallipolis, Ohio	25,000
Congressional Library	
Galveston, Tex	22,000
Fredericksburg, Va	50,000
Tallahassee, Fla	75,000
Akron, Ohio	100,000
Brunswick, Ga	100,000
Denver, Colo	1,500,000
Lynn, Mass	100,000
New Berne, N. C	100,000
Staunton, Va	100,000
Richmond, Ind	100,000
Haverhill, Mass	50,000
New Haven, Conn	50,000
La Fayette, Ind	150,000
Zanesville, Ohio	100,000
Fort Worth, Tex	75,000
Atchison, Kans	60,000
Havre de Grace, Md	10,000
Newport News, Va	100,000
Nebraska City, Nebr	100,000
Natchez, Miss	25,000
Superior, Wis	100,000
Sedalia, Mo	50,000
Dayton, Ohio	100,000
Portland, Oreg	250,000
West Point, N. Y	37,500
Jackson, Tenn	50,000
Boise City, Idaho	50,000
Wilkes Barre, Pa	75,000
Grand total	17,868,500

Of the one hundred and nineteen bills thus referred to the committee, forty-eight have been reported to the House with a favorable recommendation. Of the number favorably reported, nineteen have been favorably reported by this committee in previous Congresses, a list of which is as follows:

Greenville, S. C	$50,000
New Albany, Ind	100,000
Chattanooga, Tenn	100,000
Augusta, Ga	200,000
Augusta, Me	150,000
Macon, Ga	100,000
Reading, Pa	80,000
Carson City, Nev	100,000
Paterson, N. J	80,000
Lancaster, Pa	100,000
Port Townsend, Wash	57,000
Sacramento, Cal	100,000
Tyler, Tex	75,000
Key West, Fla	100,000
Charlotte, N. C	75,000
Clarksburg, W. Va	50,000
Asheville, N. C	50,000
San Antonio, Tex	200,000
Wilmington, N. C	100,000
Total	1,917,000

It will be observed that these nineteen bills fix the aggregate limit of the cost of the buildings authorized by them to be constructed at the sum of $1,917,000.

Eighteen of the forty-eight bills have not heretofore received the favorable recommendation of this House. These bills are as follows:

Fort Smith, Ark	$100,000
Saratoga Springs, N. Y	100,000
Keokuk, Iowa	150,000
La Crosse, Wis	100,000
Chicago, Ill	50,000
Troy, N. Y	200,000
Aberdeen, Miss	75,000
Wilmington, Del	150,000
Jackson, Mich	75,000
Waco, Tex	100,000
Duluth, Minn	100,000
Akron, Ohio	100,000
Houlton, Me	50,000
Fort Scott, Kans	50,000
Wichita, Kans	50,000
Jacksonville, Fla	100,000
Auburn, N. Y	100,000
Winona, Minn	100,000

These eighteen bills recommend appropriations limited to $1,750,000.

But it is proper to say that of these eighteen bills eight have passed the Senate during the present session, to wit:

Fort Smith, Ark	$100,000
Saratoga Springs, N. Y	100,000
La Crosse, Wis	100,000
Troy, N. Y	200,000
Waco, Tex	100,000
Fort Scott, Kans	50,000
Jacksonville, Fla	100,000
Winona, Minn	100,000

Some of the Senate bills passed that body fixing the limit at a larger sum than that mentioned in the above table, which is the sum at which the House committee passed them.

This leaves but ten bills which were reported in the first instance by this committee. These bills are as follows:

Keokuk, Iowa	$100,000
Chicago, Ill	50,000
Aberdeen, Miss	75,000
Wilmington, Del	150,000
Jackson, Mich	75,000
Duluth, Minn	100,000
Akron, Ohio	100,000
Houlton, Me	50,000
Wichita, Kans	50,000
Auburn, N. Y	100,000

These ten bills, for which this committee is primarily and originally responsible, fix the aggregate limit of the cost of the buildings to be constructed under them at the sum of $900,000. It will thus be seen that this committee, which has been so much abused, is responsible for reports upon bills which have not had the sanction of this committee in previous Congresses or passed the Senate at the present session, numbering just ten, and averaging just $90,000 each. Is this an extravagant record? Does this justify vilification and abuse and filibustering for two days in the consideration of seven bills in the Committee of the Whole House? I appeal to the country for an answer, confident that an impartial public judgment will approve our recommendations.

The eleven remaining bills, each providing for the extension of the limit of the cost of buildings and sites fixed by some previous act of Congress, and reported in each case upon the recommendation of the proper officers of the Government, and the assurance that buildings commensurate with the wants of the public service can not be constructed within the limit fixed. These bills and the increase of the amount over the original limit in each case are as follows:

Pittsburgh, Pa., amount of extension of limit	$699,400
Erie, Pa., amount of extension of limit	150,000
Council Bluffs, Iowa, amount of extension of limit	100,000
Springfield, Ill., to purchase additional ground to protect building from danger from fire	26,000
Richmond, Va., necessary enlargement of old building	75,000
Detroit, Mich., amount of extension of limit	800,000
Fort Wayne, Ind., amount of extension of limit	75,000
Saint Joseph, Mo., amount of extension of limit	225,000
Williamsport, Pa., amount of extension of limit	100,000
Scranton, Pa., amount of extension of limit	25,000
Louisville, Ky	500,000
Total	2,275,400

Let us recapitulate:

Nineteen bills which have been heretofore reported by this committee in previous Congresses, aggregating	$1,917,000
Eighteen bills which have not been heretofore reported to this House, aggregating	1,750,000

Of these eighteen eight have passed the Senate the present session, as shown above—

Eleven bills extending the limit of cost of site and building over amount fixed by previous acts of Congress, aggregating	$2,275,400
Making total recommendation, 48 bills	5,942,400

This is the sum total of recommendations of the committee. Now let us turn our attention to what has been heretofore done. Gentlemen talk as if the work of this committee in its recommendations has been not only extravagant, but as if it were a new departure, a new policy proposed by the committee. What are the facts?

For nearly a hundred years it has been the policy of this Government, as it should be of all governments that are financially able to do so, to erect public buildings where economy and the proper transaction of the public business require such structures. No party has departed from that policy. I admit that in the Forty-fourth Congress, when my colleague, Judge HOLMAN, was chairman of this committee, and in the Forty-fifth Congress, but few bills were reported for new buildings, but this was mainly, if not entirely, for the reason that previous Congresses had commenced the erection of a number of large and costly buildings in several of the large cities which required the expenditure of large additional sums of money to complete them, and therefore it was not considered sound policy to commence others until these could be completed. But as soon as they were completed or rapidly approaching completion the same policy was followed by the Forty-sixth Congress of authorizing the construction of a number of new buildings.

The Forty-sixth Congress passed bills aggregating about $6,628,190. I say "about," for the reason that only a portion of the bills passed by

that Congress fixed any limit to the cost of building and site, and hence in some cases estimates must be resorted to.

In the Forty-seventh Congress there were introduced for separate buildings, 129 bills; of these there were favorably reported, 65; there were passed, 33. The aggregate amount to be expended upon them as fixed by the limit in the several bills was $8,968,201.12. I have already said that the Forty-fourth and Forty-fifth Congresses ordered but few new structures, but appropriated large sums to complete buildings already provided for. In reply to the would-be wise economists who oppose the recommendations of this committee, and who are ever fond of turning to the economical record of that Congress—a commendable thing, I admit, when the motive is sincere—I will give the amount appropriated by these Congresses for that purpose: In the Forty-fourth Congress there was appropriated for the erection of public buildings, $5,731,632.78; in the Forty-fifth Congress there was appropriated for this same purpose $8,037,476.97; in the Forty-sixth Congress there was appropriated $8,252,047.17; in the Forty-seventh Congress there was appropriated $8,636,000; in the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Congresses there was appropriated an average in each of $7,062,097.38.

Mr. Speaker, I have now shown just what this committee has done. I have compared its work with that of the same committee in previous Congresses, and now submit that work to the judgment of the public, feeling and knowing that, while the committee probably has made some mistakes, the members of this House will, in their calmer moments, freely admit that its work has been done conscientiously, prudently, and carefully, and with strict regard to the public good. With gentlemen who vilify and abuse their associates and charge them with being engaged in a ring to rob the Government by corrupt combinations and who then vote deliberately for a river and harbor bill carrying over $12,000,000, which of all bills in this House is peculiarly subject to the charge of being log-rolled through and of being fruitful of jobs and rings (though I make no such charge), I have neither time nor disposition to discuss the matter.

It may be good policy for this House, after having determined at one time by a vote of more than two-thirds to consider these bills, to now refuse to consider any of them at this session of Congress. But I must be permitted to say that I do not believe it. I believe that when a public building is needed, and economy as well as the convenient transaction of the business of the Government demand it, it is wise economy and therefore wise public policy to construct it. And my judgment is that such expenditures, when honestly made, without jobs, always meet the hearty approval of the people. I must also be permitted to express a doubt of the policy of refusing to consider these bills and at the same time of passing appropriation bills containing appropriations for public buildings beyond the limit of cost fixed in the acts providing for their construction, which has been done during this session. But as a majority of this House has so decided, I must bow to their will thus expressed.

The Bonded Extension Bill.

SPEECH
OF
HON. TYRE YORK,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. YORK said:

Mr. CHAIRMAN: I would have voted for this bill provided I could have obtained relief for my people, but as the bill simply gives relief to the large distillers of the West without any relief whatever to the people of my State, I feel it my duty to vote against it. I desire it distinctly understood that I will not vote relief to any other section until they are willing to vote relief to mine. It is very strange to me, if the friends of this bill want the relief they claim, why they are not willing to join us and repeal the whole internal-revenue system and free the people of all sections; but it looks to me as if they wanted their heads out of the halter and leave everybody else's in. I, for one, say to them in all fairness they must meet the issue fairly and squarely, and grant to all sections the relief they demand at the hands of this House for themselves.

I would not dare go back and face the people of my State and say to them I had voted relief to the large distillers of the West while none was granted mine. I intend the citizens of my State shall have their rights and that the burdens of taxation shall be lifted from their shoulders if it is in my power to give it to them by my vote, and that every effort of mine will point in the one direction, and that shall be for the good, welfare, and happiness of the people of my whole State. Duty compels me to vote against the measure until a clause is inserted giving liberty and freedom to the citizens of North Carolina, freeing them from taxation on their distilled spirits and tobacco.

Consular and Diplomatic Appropriation Bill.

SPEECH
OF
HON. JAMES N. BURNES,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, July 5, 1884.

The House having under consideration the report of the conference committee on the bill (H. R. 6770) making appropriations for the consular and diplomatic service of the Government for the fiscal year ending June 30, 1885, and for other purposes—

Mr. BURNES said:

Mr. SPEAKER: The Senate amendment placed upon the bill, and which has just been read, seeks to make an appropriation of $250,000 for the secret-service fund of the State Department. When the amendment was first considered by the House it was deemed advisable to avoid all discussion of it, and by common consent a vote was taken without any public explanation of the merits or demerits of the proposition as made by the Secretary of State. For a second time, the Senate still insisting upon the amendment, it was called up in and again rejected by the House, also without explanation or debate. The Senate stimulated by the persistent and ambitious Secretary, having again refused to recede from the amendment, notwithstanding the decisive action of the House thereon, it comes before you for the third and last time, I hope, with all the added power and influence of the executive department of the Government. We have the option of submitting to the persistent and unreasonable demands and entreaties of the honorable Secretary of State and of the other branch of Congress, or, resisting, place all the facts and arguments bearing upon the scheme before the House and the country.

Acting under the advice and direction of the Committee on Appropriations, and strengthened by the counsel of leading associates in this House, I shall undertake to make a plain, fair statement of all the facts within my knowledge as a representative of the people bearing upon the subject to be considered. Such arguments and conclusions as may seem pertinent thereto will be left without any extended effort on my part to some of my honored colleagues and associates. At this unpropitious hour (3 a. m.), if I shall be either tedious or incoherent, I trust the House will kindly indulge me.

All of us may well regret that this amendment has been again returned for further and definite action. I had earnestly hoped that we might be spared, and that the country might be spared, any further consideration or discussion of this unpleasant subject. But appeal after appeal to gentlemen on the other side to cease the pressing of this amendment upon us has been in vain. Senators and Representatives of the same political party with the Secretary of State have avowed their sympathy with our resistance to this appropriation; but the minority here, encouraged by intimations of support from a very few of my party associates, hopeful because of the absence of so many others at the great Chicago convention, and stimulated by the personal, political, or social influences of the administration, have heedlessly brought the subject to its present point of consideration. For no part of this am I in any sense responsible; nor are any of the trusted leaders of my party. The people of the whole country must, therefore, have the opportunity of judging, on all the facts and circumstances, between the action of the Senate and that of the House.

Toward the close, perhaps shortly after the close, of the celebrated administration of a great soldier-President, twelve men—an even dozen—secured a concession from the Government of the Central American State of Nicaragua of a great body of land and the right to construct a canal across the state, through Lake Nicaragua, connecting the Atlantic and Pacific Oceans. By the express terms of the concession the *concessionnaires* were required to perform a certain portion of the work of constructing a canal prior to October 24, 1884, under penalty of absolute forfeiture of all rights thereunder. None of the required work has been done. The *concessionnaires* have had themselves incorporated under the laws of the State of Colorado by the name, I believe, of "The Maritime Canal Company of Nicaragua," but beyond that no expense has been incurred and no progress has been made.

Some of these twelve *concessionnaires* are men high in the confidence and employment of the Government. One of them was for eight years the President of the United States; another one has reached the distinction of an admiral in the Navy of the United States, and still another is an envoy extraordinary and minister plenipotentiary of the United States at one of the South American states, besides being very highly connected by blood or marriage with the *personnel* of the State Department. All are connected or were recently connected with the Government of our country, excepting two or three who are said to be eminent citizens of the State of Nicaragua.

Informally, outside of the usual channels of communication, hurriedly, stoutly, and all at once, a proposition is brought to your committee involving an appropriation of $250,000 for the secret-service fund

of the State Department, and for the alleged purpose of securing a contract by which the rights of the twelve *concessionnaires* would be secured to the Government on the further payment of $1,200,000 or $100,000 to each. The concession was presented as an immensely valuable thing. In addition to the two sums of money just mentioned it was stated that $75,000,000 more would be required from the national Treasury to construct the canal. Equally skillful as engineer and diplomat, as profoundly intimate with theodolites as with statecraft, our "guide, philosopher, and friend" needed but a few moments to demonstrate that the estimates of ordinary engineers fixing the probable cost of the work at not less than $300,000,000 were unreasonable and absurd, and that the volcanic action in that country, instead of wrecking or destroying the masonry in the necessary locks and dams of the canal, had the beneficent kindness to cement and strengthen it. Thus, in furtherance of this great international enterprise, the forces of nature were in fraternal accord with the genius and spirit of diplomacy. How pitiful that both should be embarrassed for the want of but $76,450,000 from the great surplus "idle in the Treasury."

Two of the great powers are reported as holding tickets in what has been called a diplomatic lottery. The prize—grand prize they call it—is the right to construct a ship-canal across the isthmus connecting the two Americas. Why we should purchase that which this Government, as now administered, has suffered Frenchmen to take at will the honorable Secretary does not tell us. Why this Government should purchase a right that Nicaragua tendered, freely and without cost, to twelve mere adventurers the honorable Secretary does not tell us. Why we should deny to Germans that which we allow Frenchmen to take must be withheld as a state secret. We are asked to submit ourselves and our judgments, tranquilly, to the proverbial good luck of the Administration, without curiosity to know or desire to uncover the secrets of the *art diplomatique*, with the assurance that for $1,450,000 the Government will obtain the barren right to construct a canal across the State of Nicaragua.

Mighty prize! Proud trophy for the Forty-eighth Congress! Your Committee on Appropriations are asked to indorse in blindness a seemingly blind scheme, and after such an indorsement to demand the blind confidence of the House. With all due respect for the integrity of the present administration, we can not accept such a suggestion, nor ask nor accept such a childlike acquiescence. The American House of Representatives will never give such a confidence to a committee or to any branch or department of the Government; and our people will ever abhor and detest all secret and irresponsible expenditures of the public money. The joining together of two committees—Foreign Affairs with Appropriations—does not change the principle. Nothing but a committee of the whole House can represent the will and duty of the House. No other committee can determine the question whether $250,000 of the public money shall be torn from its place in the Treasury, without account or accountability, and given to secret uses and purposes, which, so far as we are informed, are immeasurably below the dignity and honor of our institutions and our flag.

The inquiry was made in conference and may properly arise here: what is the necessity for all this haste? Now, sir [after a pause], I hesitate because although I feel at perfect liberty to speak to the whole subject without reserve or restraint, yet for the sake of what, by some chance, may be an occult or latent interest of the Government, I would not go beyond the necessities of a full and fair discussion of what I regard a monstrous proposition. Therefore I will not say what I intended, but will briefly outline the facts as they exist in the first instance. We are told that unless this appropriation is made before the 24th day of October next two of the great powers of the earth, vieing with each other in efforts to win the prize, will close every door in Nicaragua against us, and leave the United States a stranger to a great ship-canal between the two great oceans. To this threatened peril we interposed and now here interpose the provision in the concession that makes its transfer an impossibility. To this threatened peril we further interposed and now here interpose the "Monroe doctrine," to which I shall more particularly call your attention. And to this threatened peril we further interposed and now again interpose the Clayton-Bulwer treaty; and finally, we now submit, what harm can result to this country from the construction of the suggested canal by German men and German money, if it be done with a full knowledge of the fact that the "Monroe doctrine" is the declaration of a national right, which this Government will promptly assert whenever the peace and happiness of our people or of the people of Nicaragua require it?

In 1823 President Monroe, in his annual message to Congress, announced with respectful firmness a great principle of American nationality. That it foreshadowed rather than expressed the full meaning intended is but the lofty evidence of a patriotic determination on the part of the President to advance the great doctrine without taking a single step backward. He said:

> At the proposal of the Russian Imperial Government made through the minister of the Emperor residing here, a full power and instructions have been transmitted to the minister of the United States at St. Petersburg to arrange by amicable negotiation the respective rights and interests of the two nations on the northwest coast of this continent. A similar proposal had been made by His Imperial Majesty to the Government of Great Britain which has likewise been acceded to. The Government of the United States has been desirous by this friendly proceeding of manifesting the great value which they have attached to the friendship of the Emperor, and their solicitude to cultivate the best understanding with his government. In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been judged proper for asserting as a principle, in which the rights and interests of the United States are involved, that the American continents by the free and independent condition which they have assumed and maintain are henceforth not to be considered as subjects for future colonization by any European powers.

The above was the carefully chosen language in which the great principle was clearly foreshadowed. But, as if to show his determination to advance upon and never recede from the principle asserted, the President before concluding the same great paper says:

> It was stated at the commencement of the last session that a great effort was then making in Spain and Portugal to improve the condition of the peoples of those countries, and it appeared to be conducted with extraordinary moderation. It need scarcely be remarked that the result has been so far very different from what was then anticipated. Of events in that quarter of the globe with which we have so much intercourse, and from which we derive our origin, we have always been anxious and interested spectators. The citizens of the United States cherish sentiments the most friendly in favor of the liberty and happiness of their fellow-men on that side of the Atlantic. In the wars of the European powers, in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defense. With the movements in this hemisphere we are of necessity more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different from that of America. This difference proceeds from that which exists in their respective governments. And to the defense of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere. But with the governments who have declared their independence and maintained it, and whose independence we have on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States. In the war between those new governments and Spain we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere provided no change shall occur which, in the judgment of the competent authorities of this government, shall make a corresponding change on the part of the United States indispensable to their security. The late events in Spain and Portugal show that Europe is still unsettled. Of this important fact no stronger proof can be adduced than that the allied powers should have thought it proper on any principle satisfactory to themselves to have interposed by force in the internal concerns of Spain. To what extent such interposition may be carried on the same principle is a question in which all independent powers whose governments differ from theirs are interested, even those most remote, and surely none more so than the United States. Our policy in regard to Europe, which was adopted at an early age of the wars which have so long agitated that quarter of the globe, nevertheless remains the same—which is, not to interfere in the internal concerns of any of its powers; to consider the government *de facto* as the legitimate government for us, to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy, meeting in all instances the just claims of every power, submitting to injuries from none. But in regard to those continents circumstances are eminently and conspicuously different. It is impossible that the allied powers should extend their political system to any portion of either continent without endangering our peace and happiness; nor can any one believe that our Southern brethren, if left to themselves, would adopt it of their own accord. It is equally impossible, therefore, that we should behold such interposition in any form with indifference. If we look to the comparative strength and resources of Spain and those new governments, and their distance from each other, it must be obvious that she can never subdue them. It is still the true policy of the United States to leave the parties to themselves in the hope that other powers will pursue the same course.

The final declaration of President Monroe bearing upon this great subject was made in his last annual message to Congress. Speaking of the new nations of Spanish America and their progress he says:

> In this their career, however, we have not interfered, believing that every people have a right to institute for themselves the government which in their judgment may suit them best * * * The deep interest which we take in their independence, which we have acknowledged, and in their enjoyment of all the rights incident thereto, especially in the very important one of instituting their own government, has been declared and is known to the world. Separated as we are from Europe by the Great Atlantic Ocean, we can have no concern in the wars of the European governments, nor in the causes which produced them. The balance of power between them, into whichever scale it may turn in its various vibrations, can not affect us. It is the interest of the United States to preserve the most friendly relations with every power, and on conditions fairs equal, and applicable to all. But in regard to our neighbors our situation is different. It is impossible for the European governments to interfere in their concerns, especially in those alluded to, which are vital, without affecting us; indeed, the motive which might induce such interference in the present state of the war between the parties, if a war it may be called, would apply equally applicable to us. It is gratifying to know that some of the powers with whom we enjoy a very friendly intercourse, and to whom these views have been communicated, have appeared to acquiesce in them.

If we make an analysis of the declarations of President Monroe, just read, we conclude:

First. That the American continents are not open to further or future colonization by European powers.

Second. That any attempt on the part of any European power to extend its system to any portion of this hemisphere is dangerous to our peace and safety, and will not be allowed under any circumstances.

Third. That any attempt to oppress the people or control the destiny of any Spanish-American state by any European nation will be regarded as the manifestation of an unfriendly feeling toward us.

Fourth. That the extension of their systems to this continent by European nations would endanger our peace and happiness; and their

interference in the affairs of any South or Central American state can not be witnessed by us with indifference.

And finally, as a fair and logical conclusion of the whole matter, that the people and Government of the United States of America, by reason of their geographical position, of their natural and political rights in Central and South America as neighbors, and of their well-established purpose never to interfere or intermeddle in any mere European question, will never allow any European government to hold any right or privilege in this hemisphere which is now or may hereafter become a menace to their safety, peace, prosperity, or happiness.

Whatever foothold, therefore, any one or all of the great powers of Europe may have obtained or may hereafter obtain on these continents must be considered and held subsidiary to the great right of the great Republic to preserve itself from every coming danger and at any time to take and hold that which may disturb the peace, mar the happiness, or affect the substantial prosperity of its people.

The affected obscurity and courtly monotone of diplomatic phrases may shade or veil our national intention, but whenever the occasion for the people of this country to declare it arrives the whole world may read it in red letters upon the sky, rather than in musty tomes of a schemeful diplomacy.

The advocates of this amendment have been called upon to inform us if the proposed action of the Secretary of State was not in violation of an existing treaty between the United States and Great Britain. To this hour no satisfactory answer has been made. It is not possible to ignore the fact that on the 19th day of April, 1850, a treaty was executed by the two countries, commonly called the Clayton-Bulwer treaty, by the terms and stipulations of which this plighted-faith-keeping and plighted-faith-demanding Republic agreed that it would never obtain or maintain for itself any ship-canal through the San Juan River, nor and through either or both of the lakes of Nicaragua or Managua, between the Atlantic and Pacific Oceans; and that it would never erect or maintain any fortifications commanding the same; and that it would never make use of any protection which it affords or may afford, or any alliance which it has or may have to or with the state or people of Nicaragua for the purpose of erecting or maintaining any such fortification, or of occupying, fortifying, or colonizing Nicaragua, or of assuming or exercising dominion over the same; and that it will not take advantage of any intimacy or use any alliance, connection, or influence that it may possess with Nicaragua, through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for its citizens any right or advantage in regard to commerce or navigation through said canal which shall not be offered on the same terms to the subjects of Great Britain. These are some of the solemn compacts made in this Clayton-Bulwer treaty, and so far as we are officially or otherwise advised the treaty is in as full force and effect as on the day of the exchange of ratifications by the two governments.

The Secretary of State says the abrogation of the treaty has been a subject of diplomatic correspondence; but he admits that no formal notice to abrogate has been given by or to either government. It has been claimed that Great Britain has violated the treaty, and that therefore it is *ipso facto* null and void. Great Britain denies that any such violation has occurred, and has demanded specification and proof. It has not been pretended that any such specification or proof has been furnished Great Britain by our State Department.

If there was ever a treaty that ought to be annulled, this is the one. If there was ever a treaty that this Government ought to violate, this is the one. It was un-American, unwise, unjust to our history and traditions and a stain upon our national honor. But we have lived up to it for a third of a century. Is it not the part of wisdom as well as of duty to abrogate it by such reasonable and formal notice as international law and custom may sanction rather than by a secret intrigue in violation of it at last? As Americans we are strong enough and brave enough to keep our Government within the plain path of duty and right. In an evil hour the administration of President Fillmore made the United States and Great Britain partners in a prospective ship-canal through Nicaragua. Let us dissolve the partnership with due national dignity and decorum, by mutual consent, or, failing in that, by respectful notice. Let us not secretly, in darkness and blindness, by intrigue and contrivance, seize a seemingly forbidden thing which in six months we can in honor, in the sunlight of Heaven, and in the spirit of American manhood, without diplomatic mousing, put out the great arm of the nation and take by divine right. Away from statecraft and juggling, which some seem to regard as diplomacy and statesmanship, in every household in our broad land where the altar of home is maintained in its integrity there is a living prayer that this Republic and its Government may avoid "even the appearance of evil" in dealing with mankind. This Clayton-Bulwer treaty, then, hateful as it is, raises a bar to the inchoate proceedings of the honorable Secretary of State. Let us wait until it is removed. And when it is removed, let us discuss with our great constituencies, not here in the after-midnight hours of an expiring session, whether we want to construct such a work, in such a place, at such a fearful cost, and pay such a tribute in money to twelve traffickers in the national honor and the national prosperity.

It is suggested that in perfect fairness to the twelve *concessionnaires* it ought to be stated that it is claimed for them that in obtaining their act of incorporation by the State of Colorado some ten or twelve thousand dollars were expended, and they are willing to make no claim for that sum if the $1,200,000 are paid them. So, after all, it can not be said that they are entirely destitute of liberality to the Government! [Laughter.]

We conclude that if these *concessionnaires* have rights in Nicaragua, this Government, on general principles, will protect them, perhaps regardless of any question as to the means and influences used in securing them. The seemingly vested right of a citizen is a dangerous thing for a government to touch. But when citizens have sought to place themselves in the supposed pathway of progress of their government and caught a fleeting shadow that they can neither hold nor utilize, we know of no obligation that requires the government to pay them $1,200,000 or any other sum for their adventure. If they have something to sell that the Government needs, let us purchase it at a fair price. If they have nothing, or nothing that we need, let us not first lend them the anticipated future of a continent, and then, under the influence of diplomatic hints and organized power, discount in dollars the loan we ourselves have made.

Mr. BELFORD. Will the gentleman from Missouri mention the names of citizens of my State who are engaged in that enterprise?

Mr. BURNES. I am happy in saying that the Centennial State, always so ably and fairly represented in this House, had no representative among the twelve *concessionaires*. They simply found your Legislature or laws convenient for the obtaining of an act of incorporation. This is all that Colorado had to do with the subject.

Mr. SPRINGER. A charter out there costs about $2.50, I guess.

Mr. BURNES. The estimate of my friend from Illinois is about correct.

Mr. COSGROVE. And dear at that. [Laughter.]

Mr. BURNES. Another suggestion has been made. It was made to avoid the objection that we urge against paying out so large a sum of money to mere private parties who have nothing to sell. The suggestion was that further negotiations with the *concessionnaires* would be abandoned and this Government would treat directly with another government—perhaps the *personnel* of the government. It could not, however, be concealed that the results would be the same. The same amounts of money would be required, and the same benefits would result to the *concessionnaires*. It was doing indirectly that which the people would object to and protest against if done directly. It was to obtain nothing more nor less, and pay neither more nor less, than the original scheme involved. It was doubtless the refined spirit of diplomacy at work—its essence and genius; but ordinary business simplicity could neither compass it nor yield to it.

Mr. BLOUNT. Will the gentleman from Missouri allow me a question, confidentially? [Laughter.]

Mr. BURNES. Certainly; with pleasure.

Mr. BLOUNT. I desire to have my friend from Missouri state at this time the sums of money now or hereafter to be involved by this proceeding.

Mr. BURNES. It always gives me pleasure to follow the suggestion of my distinguished friend from Georgia——

Mr. HENLEY. Will your answer be confidential? [Laughter.]

Mr. BURNES. No, sir; but unless our friends the Official Reporters preserve what we say at this hour it will have a more certain oblivion.

Now, in answer to my friend from Georgia: This amendment calls for $250,000. That sum enables the Secretary to make a contract. Then follows $1,200,000 to pay the *concessionaires* directly or indirectly. Then follows $75,000,000, the Secretary says, $300,000,000 others say, to construct a canal.

In the best judgment and information of your committee the beginning involves or contemplates a total expenditure of $301,450,000. The distinguished engineer at the head of the State Department estimates the total expenditure at $76,450,000. Engineers, like physicians, proverbially differ. You have the estimates of both sides; take your choice.

It has been suggested that as the scheme of the *concessionnaires* was in the throes of a miserable dissolution, they would probably take a less sum than $1,200,000; and some comment has been made on the statement of the Secretary that he would be willing to pay a "good round sum" to get their rights to the concession. I care not. I am opposing the whole scheme. I would not appropriate a dollar in the form and manner proposed. Yet it is fair to say that the *concessionaires* have never, so far as I have heard, named a less sum than $1,200,000 for their alleged interests.

Mr. PUSEY. Not round enough.

Mr. BURNES. That is said by my good friend and neighbor from Iowa to be not round enough. The kindred people inhabiting my friend's district and my own—adjoining districts—will never object to millions honestly expended in broad daylight for the general welfare, but one dollar of dark and secret expenditure, or of personal tribute, will become to its supporters as a millstone around the neck to the most expert swimmer.

I shall detain the House but a few moments more. I have fought this scheme earnestly, and perhaps warmly. If I have wounded any of my good friends on the other side, I beg they will pardon me. I would not

do so willfully. I abhor the scheme and denounce it. The impudence of these *concessionnaires* arouses indignation, and I denounce them. They know they have nothing to sell, but they would gladly sell nothing for $1,200,000 of the money of a people who have honored them and trusted them beyond any possible desert.

The 24th of October next will soon arrive. A little more than three months and the fatal day of the concession will be upon the heads of the *concessionnaires*. Visions of a lost speculation are already materializing everywhere before them. Having placed themselves as they had fondly hoped across the pathway of their government—an exalted connection with which gave them the opportunity to secure the concession—they have waited in insolent and audacious neglect of their obligations to Nicaragua as imaginary obstructionists to the progress of our national and international commerce for the door of the national Treasury to be opened to them. They have waited in vain. Only sand is beneath their feet. The calm intelligence of the American people is succeeding to and expelling corruption in high places. An era in which, under cover of partisan zeal and a pretended patriotism, any scheme of plunder was possible has passed away, we trust, forever. The inherent nature and surroundings belonging to every proposition we are beginning to consider regardless of the magic power of any great name or the productive courtesies and blandishments of any one in great station.

The 24th of October is near at hand; hence the necessity for haste. The light of a restored reason is turned upon our action; hence the necessity for secrecy. The voice of the people is again the voice of God; hence the necessity for concealing, by appropriations to secret-service funds, how the public money is expended. Misfortunes—if that is not a word too charitable—have come upon some of the twelve. For them, surely, this Government is not responsible. Sympathetic as we are we can not be expected to relieve them directly or indirectly from the national Treasury. The twelve *concessionnaires* of Nicaragua have shown enterprise in adventure, but no progress in their undertakings. Apostolic in number, they should have exhibited some apostolic results. The Administration have been shown, perhaps, apostolic graces not seen by us. Deep in the archives of the State Department, it may be, are unanswerable evidences justifying the Honorable Secretary in his enthusiastic campaign for this much coveted appropriation; but if so, they have been deemed too sacred or apostolic to be communicated to the mere representatives of the people of the United States! Painful as it is to oppose the wishes of the Secretary, disappoint the twelve *concessionnaires*, or spoil a scheme so beautiful and fruitful to all save the Government and people of this country, we are yet compelled to declare that appropriations from the public Treasury must be for the public welfare and made plain and open to the eyes of the people. They abhor secret service and secret-service funds. They believe we are strong enough in the right to demand openly all we are entitled to; and more they do not desire us to ask.

We oppose, then, this amendment and shall continue to oppose it with every means at our command. To allow it is a further surrender of the Monroe doctrine, a surrender of our traditional continental policy. It would be in violation of one of the solemn treaties of this Government with a friendly power. It would be taking $1,450,000 out of the public Treasury and giving it to private persons *for nothing*, under the miserable pretense that this Government will undertake to build a ship-canal across Nicaragua at a cost of from $75,000,000 to $300,000,000. Beyond all this it would recognize the right of the representatives, the servants, of the people to take the money of their constituents secretly and expend it secretly without their knowledge or consent. To this we can never consent. It is anti-democratic, anti-republican, and contrary to the spirit and genius of our institutions. [Applause.]

INDEX

TO THE

APPENDIX TO THE CONGRESSIONAL RECORD.

Beach, *Lewis* (*a Representative from New York*)
River and harbor appropriation bill 279.
Yellowstone National Park 340.

Bingham, *Henry H.* (*a Representative from Pennsylvania*)
Post-Office appropriation bill 48.

Bisbee, *Horatio, jr.* (*a Representative from Florida*)
Jurisdiction of circuit courts 276.
River and harbor appropriation bill 292.
Tariff 175.

Blanchard, *Newton C.* (*a Representative from Louisiana*)
